

RECIPE AND WORKFLOW MANAGEMENT

RELEASE 11.01.00
FUNCTIONAL REQUIREMENT SPECIFICATION

PUBLICATION PSFRSRD-RM011B-EN-E-AUGUST-2023

10007172393/SPC

Supersedes publication PSFRSRD-RM011A-EN-E

This document and any accompanying Rockwell Automation software products are copyrighted by Rockwell Automation Technologies, Inc. Any reproduction and/or distribution without prior written consent from Rockwell Automation Technologies, Inc. is strictly prohibited. Please refer to the license agreement for details.

Trademark Notices FactoryTalk, PharmaSuite, ProductionCentre, Rockwell Automation, Rockwell Software, and the Rockwell Software logo are registered trademarks of Rockwell Automation, Inc.

The following logos and products are trademarks of Rockwell Automation, Inc.:

FactoryTalk Shop Operations Server, FactoryTalk Administration Console, FactoryTalk Automation Platform, and FactoryTalk Security.

Operational Data Store, ODS, Plant Operations, Process Designer, Shop Operations, Rockwell Software CPGSuite, and Rockwell Software AutoSuite.

Other Trademarks ActiveX, Microsoft, Microsoft Access, SQL Server, Visual Basic, Visual C++, Visual SourceSafe, Windows, Windows 7 Professional, Windows 10, Windows Server 2008, Windows Server 2012, Windows Server 2016, and Windows Server 2019 are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

Adobe, Acrobat, and Reader are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

ControlNet is a registered trademark of ControlNet International.

DeviceNet is a trademark of the Open DeviceNet Vendor Association, Inc. (ODVA).

Ethernet is a registered trademark of Digital Equipment Corporation, Intel, and Xerox Corporation.

OLE for Process Control (OPC) is a registered trademark of the OPC Foundation.

Oracle, SQL*Net, and SQL*Plus are registered trademarks of Oracle Corporation.

All other trademarks are the property of their respective holders and are hereby acknowledged.

Warranty This product is warranted in accordance with the product license. The product's performance may be affected by system configuration, the application being performed, operator control, maintenance, and other related factors. Rockwell Automation is not responsible for these intervening factors. The instructions in this document do not cover all the details or variations in the equipment, procedure, or process described, nor do they provide directions for meeting every possible contingency during installation, operation, or maintenance. This product's implementation may vary among users.

This document is current as of the time of release of the product; however, the accompanying software may have changed since the release. Rockwell Automation, Inc. reserves the right to change any information contained in this document or the software at any time without prior notice. It is your responsibility to obtain the most current information available from Rockwell when installing or using this product.

Industry Terminology Rockwell Automation recognizes that some of the terms that are currently used in our industry and our publications are not in alignment with the movement toward inclusive language in technology. We are proactively collaborating with industry peers to find alternatives to such terms and making changes to our products and content. Please excuse the use of such terms in our content while we implement these changes.

Contents

1	Introduction	1
2	Recipe and Workflow Management (SR3146+).....	3
2.1	Recipe Designer (SR3071.6+)	5
2.1.1	GID-2666446 Access control (SR3071.6.2)	5
2.2	Workflow Designer (SR3071.7+)	5
2.2.1	GID-2666447 Access control (SR3071.7.2)	5
3	Management of Master Recipes and Master Workflows (SR3146.4+)	7
3.1	GID-2666033 Master Recipe Model - S88 (SR3146.9.3)	10
3.1.1	GID-2666448 Master Recipe - Header Attributes (SR3146.9.3.1)	10
3.1.2	GID-2666449 Master Recipe - Review Mode (SR3146.9.3.2)	11
3.2	GID-2666034 Master Workflow Model - S88 (SR3146.9.12)	12
3.2.1	GID-2666450 Master Workflow - Header Attributes (SR3146.9.12.1)	12
3.2.2	GID-2666451 Master Workflow - Review Mode (SR3146.9.12.2)	13
3.3	GID-2666035 Procedural Structure (SR3146.9.4).....	14
3.3.1	Procedural structure - Building blocks	14
3.3.2	Procedural structure - Links and Branches	15
3.3.3	Procedural structure - Transitions	15
3.3.4	GID-2666455 Procedural structure - Parallel execution (SR3146.9.4.1).....	16
3.3.5	GID-2666456 Procedural structure - Conditions (SR3146.9.4.2)	16
3.3.6	GID-2666457 Procedural structure - Hidden phase (SR3146.9.4.5).....	16
3.3.7	GID-2666458 Procedural structure - Operation type (SR3146.9.4.4).....	16
3.3.8	GID-2666459 Procedural structure - Pre-defined texts for exceptions and comments (SR3146.9.4.6).....	17
3.3.9	GID-2666460 Procedural structure - Hide in batch/workflow report (SR3146.9.4.7)	17

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.3.10	GID-2666461 Procedural structure - Group of Building Blocks (SR3146.9.4.8)	18
3.3.11	Process Inputs (SR3146.9.5).....	18
3.3.12	Process Outputs (SR3146.9.6+)	30
3.3.13	Process Parameters (SR3146.9.7+).....	31
3.3.14	Locking of Parameters (SR3146.9.13+)	34
3.3.15	Locking of Transitions (SR3146.9.14+)	35
3.4	Workbench Object Operations (SR3146.9.10+).	36
3.4.1	GID-2666467 Workbench Object Operations - Master Recipe (SR3146.9.10.1).....	36
3.4.2	GID-2666468 Workbench Object Operations - Master Workflow (SR3146.9.10.9).....	37
3.4.3	GID-2666469 Workbench Object Operations - Element (SR3146.9.10.6)	39
3.4.4	Workbench Object Operations - Link and Transition	40
3.4.5	GID-2666471 Workbench Object Operations - Smart Replace (SR3146.9.10.10)	40
3.4.6	GID-2666472 Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)	45
3.5	GID-2666037 Material Flow Control (MFC) (SR3146.9.8)	46
3.5.1	GID-2666473 Graphical View (SR3146.9.8.1)	47
3.5.2	GID-2666474 Table View (SR3146.9.8.1.1).....	48
3.5.3	GID-2666475 Tooltips (SR3146.9.8.2).....	48
3.5.4	GID-2666476 Automatic Merge - Default MFC Definition (SR3146.9.8.3)	49
3.5.5	Manual Merge	50
3.5.6	GID-2666478 Split (SR3146.9.8.8)	51
3.5.7	GID-2666479 Reset (SR3146.9.8.9).....	52
3.5.8	GID-2666480 Automated Update of MFC Representation (SR3146.9.8.10) ...	52
3.5.9	GID-2666481 MFC Definition Linked to Procedure Level (SR3146.9.8.12)	52
3.6	Information Flow (SR3146.9.9+).	53
3.6.1	GID-2666482 Output Mechanism (SR3146.9.9.1)	53
3.6.2	GID-2666483 Referencing (SR3146.9.9.2)	53
3.6.3	GID-2666484 Validator (SR3146.9.9.3)	53

3.7	GID-2666039 Standard Statuses for Version Control (SR3146.6.4).....	54
3.7.1	GID-2666485 Default Version Graph for Master Recipes (SR3146.6.4.1).....	55
3.7.2	GID-2666486 Default Version Graph for Master Workflows (SR3146.6.4.4)	58
3.8	Validator Consistency Checks (SR3146.9.4.3+).....	61
3.8.1	Checks that Apply to SFC Modeling	61
3.8.2	Checks that Apply to Group Modeling	63
3.8.3	Checks that Apply to Transition Conditions	65
3.8.4	Checks that Apply to Expressions within Parameter Attributes	67
3.8.5	Checks that Apply to MFC Modeling of a Procedure within Recipe and Workflow Designer	68
3.8.6	Checks that Apply to Master Recipes in General.....	73
3.8.7	Checks that Apply to Master Recipes Based on an ERP BOM	74
3.8.8	Checks that Apply to Material Parameters of a Phase	77
3.8.9	Checks that Apply to Specific Dispense Building Blocks	84
3.8.10	Checks that Apply to Inline Weighing	88
3.8.11	Checks that Apply to Output Weighing.....	92
3.8.12	Checks that Apply to Non-production Master Recipes in General	93
3.8.13	Checks that Apply to Master Workflows in General	94
3.8.14	Checks that Apply to Signature Privileges of a Phase	95
3.8.15	Checks that Apply to Equipment Requirements of a Phase	96
3.8.16	Checks that Apply to Work Center Assignments	99
3.8.17	Checks that Apply to Capability Assignments in General	100
3.8.18	Checks that Apply to Escalation-enabled Capability Assignments.....	103
3.8.19	Checks that Apply to Trigger-enabled Capability Assignments	104
3.8.20	Checks that Apply to Server-run Capability Assignments.....	106
3.8.21	Checks that Apply to the Wait for Event (OES) Phase.....	107
4	Management of Building Blocks (SR3146.10+)	109
4.1	GID-2666042 Header Attributes (SR3146.10.4).....	109
4.2	GID-2666043 Workbench Object Operations (SR3146.9.10.7).....	110
4.2.1	4.2.1 GID-2666508 Workbench Object Operations - New Custom Building Block Dialog (SR3146.9.10.7.2).....	111

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

4.2.2	GID-2666509 Workbench Object Operations - View Locked Custom Building Block (SR3146.9.10.7.1).....	112
4.3	GID-2666044 Status Handling of Custom Building Blocks (SR3146.10.1)....	112
4.4	GID-2666045 Status History (SR3146.10.5).....	114
4.5	GID-2666046 Revisioning (SR3146.10.2)	114
4.6	GID-2666047 Usage List (SR3146.10.3)	114
4.6.1	GID-2666510 Content (SR3146.10.3.1)	115
4.6.2	GID-2666511 Objects Information (SR3146.10.3.2).....	115
4.6.3	GID-2666512 Filter (SR3146.10.3.3)	115
4.7	GID-2666048 Usage List of a System Phase (SR3146.10.6).....	116
4.7.1	GID-2666513 Content (SR3146.10.6.1)	116
4.7.2	GID-2666514 Objects Information (SR3146.10.6.2).....	116
4.7.3	GID-2666515 Filter (SR3146.10.6.3)	117
5	Comparing Master Recipes, Master Workflows, and Custom Building Blocks (SR3146.15+)	119
5.1	Comparison Algorithm (SR3146.15.1+)	119
5.1.1	Comparing Header Attributes (SR3146.15.1.1+)	119
5.1.2	GID-2666517 Comparing Element Attributes (SR3146.15.1.2)	120
5.1.3	GID-2666518 Comparing Source Attributes (SR3146.15.1.3)	121
5.1.4	Comparing Parameter Attributes (SR3146.15.1.4+)	121
5.1.5	Comparing Procedural Elements (SR3146.15.1.5+)	123
5.2	GID-2666051 Defining a Comparison Baseline (SR3146.15.2)	123
5.3	GID-2666052 Performing a Comparison (SR3146.15.3)	124
6	Management of Change Requests (SR3146.12+)	125
6.1	GID-2666054 Header Attributes (SR3146.12.1).....	125
6.2	GID-2666055 Workbench Object Operations (SR3146.12.6)	126
6.2.1	GID-2666521 Open Dialog - Hide Objects (SR3146.12.6.3)	127
6.2.2	GID-2666522 Open Dialog for Protected Objects (SR3146.12.6.2)	127
6.2.3	GID-2666523 Workbench Object Operations - View Locked Change Request (SR3146.12.6.1)	127
6.3	Status Management of Change Requests (SR3146.12.2+)	128

6.3.1	GID-2666524 Master Recipe-specific Change Requests (SR3146.12.2.2).....	128
6.3.2	GID-2666525 Master Workflow-specific Change Requests (SR3146.12.2.3).....	132
6.3.3	GID-2666526 Scope Validity Check (SR3146.12.2.1).....	136
6.3.4	GID-2666527 Change Status Dialog (SR3146.12.2.4).....	137
6.4	Scope Definition (SR3146.12.3+)	137
6.4.1	GID-2666528 Define Old/New Building Blocks (SR3146.12.3.1).....	137
6.4.2	GID-2666529 Select from Usage List (SR3146.12.3.2)	139
6.5	GID-2666058 Action List (SR3146.12.4).....	140
6.6	GID-2666059 Execute Change Request (SR3146.12.5).....	140
6.6.1	GID-2666530 Execution Status (SR3146.12.5.2)	142
6.6.2	GID-2666531 Cancel Change Request (SR3146.12.5.1).....	143
6.7	GID-2666060 Scheduled Execution of Change Requests (SR3146.12.7)	143
7	Master Recipe Report - Batch (SR3146.11+)	145
7.1	GID-2666062 Print MR Report (SR3146.11.1)	145
7.2	GID-2666063 MR Report - SFC Pagination (SR3146.11.1.1)	145
7.3	GID-2666064 MR Report Header (SR3146.11.2)	145
7.4	GID-2666065 MR Report Footer (SR3146.11.3)	145
7.5	GID-2666066 MR Report Cover Page (SR3146.11.5).....	146
7.6	MR Report Sections (SR3146.11.4+).....	146
7.6.1	GID-2666532 MR report - Table of contents (SR3146.11.4.15).....	146
7.6.2	GID-2666533 MR report - Basic data (SR3146.11.4.1)	147
7.6.3	GID-2666534 MR report - Comments (SR3146.11.4.2).....	147
7.6.4	GID-2666535 MR report - Approval record (SR3146.11.4.3)	147
7.6.5	GID-2666536 MR report - Bill of materials (SR3146.11.4.4)	148
7.6.6	GID-2666537 MR report - Work center assignments (SR3146.11.4.5)	148
7.6.7	GID-2666538 MR report - Material flow control (SR3146.11.4.6)	149
7.6.8	GID-2666539 MR report - Critical process parameters (SR3146.11.4.7)	149
7.6.9	GID-2666540 MR report - Critical quality attributes (SR3146.11.4.8).....	150
7.6.10	GID-2666541 MR report - Key process parameters (SR3146.11.4.9).....	150
7.6.11	GID-2666542 MR report - Key quality attributes (SR3146.11.4.10).....	150

7.6.12	GID-2666543 MR report - Procedure (SR3146.11.4.11).....	151
7.6.13	GID-2666544 MR report - Unit procedure (SR3146.11.4.12).....	151
7.6.14	GID-2666545 MR report - Operation (SR3146.11.4.13)	151
7.6.15	GID-2666546 MR report - Phase (SR3146.11.4.14)	152
7.6.16	GID-2666547 MR report - Comparison with baseline (SR3146.11.4.17)	153
8	Master Workflow Report (SR3146.13+)	155
8.1	GID-2666069 Print MWF Report (SR3146.13.1)	155
8.2	GID-2666070 MWF Report - SFC Pagination (SR3146.13.1.1)	155
8.3	GID-2666071 MWF Report Header (SR3146.13.2)	155
8.4	GID-2666072 MWF Report Footer (SR3146.13.3)	156
8.5	GID-2666073 MWF Report Cover Page (SR3146.13.5).....	156
8.6	MWF Report Sections (SR3146.13.4+).....	156
8.6.1	GID-2666548 MWF report - Table of contents (SR3146.13.4.13).....	156
8.6.2	GID-2666549 MWF report - Basic data (SR3146.13.4.1)	157
8.6.3	GID-2666550 MWF report - Comments (SR3146.13.4.2).....	157
8.6.4	GID-2666551 MWF report - Approval record (SR3146.13.4.3)	157
8.6.5	GID-2666552 MWF report - List of materials (SR3146.13.4.15)	158
8.6.6	GID-2666553 MWF report - Work center assignments (SR3146.13.4.4)	158
8.6.7	GID-2666554 MWF report - Critical process parameters (SR3146.13.4.5) ...	159
8.6.8	GID-2666555 MWF report - Critical quality attributes (SR3146.13.4.6).....	159
8.6.9	GID-2666556 MWF report - Key process parameters (SR3146.13.4.7).....	159
8.6.10	GID-2666557 MWF report - Key quality attributes (SR3146.13.4.8)	159
8.6.11	GID-2666558 MWF report - Procedure (SR3146.13.4.9)	160
8.6.12	GID-2666559 MWF report - Unit procedure (SR3146.13.4.10).....	160
8.6.13	GID-2666560 MWF report - Operation (SR3146.13.4.11)	161
8.6.14	GID-2666561 MWF report - Phase (SR3146.13.4.12)	161
8.6.15	GID-2666562 MWF report - Comparison with baseline (SR3146.13.4.17)	162
9	Designer Workbench (SR3146.9+)	163
9.1	Workbench Usability (SR3146.9.1+).	163
9.1.1	Custom Building Block Image	163

9.1.2	GID-2666564 Process View (SR3146.9.1.1).....	165
9.1.3	GID-2666565 Group of Building Blocks Representation (SR3146.9.1.7)	166
9.1.4	GID-2666566 Navigation (SR3146.9.1.2).....	166
9.1.5	GID-2666567 Context Menus (SR3146.9.1.3).....	167
9.1.6	Copy & Paste Function (SR3146.9.1.6+).....	167
9.1.7	GID-2666569 Docking (SR3146.9.1.4)	169
9.1.8	GID-3093192 Tooltips (SR3146.9.1.5).....	170
9.2	Workbench UI Elements (SR3146.9.2+).....	170
9.2.1	GID-2666570 Work Area (SR3146.9.2.1).....	170
9.2.2	Open Dialog (SR3146.9.2.20+).....	171
9.2.3	Library Universe (SR3146.9.2.4+)	172
9.2.4	GID-2666573 Setlist (SR3146.9.2.9)	174
9.2.5	GID-2666574 Parameter Panel (SR3146.9.2.7)	177
9.2.6	Property Windows	179
9.2.7	Messages (SR3146.9.2.16+).....	181
9.2.8	Comparison (SR3146.9.2.19+)	183
9.2.9	GID-2666578 Preview Panel (SR3146.9.2.11)	185
9.2.10	GID-2666579 Expression Editor (SR3146.9.9.4).....	185
9.2.11	Other Editors (SR3146.9.2.17+)	195
9.2.12	GID-2666581 Statistics (SR3146.9.2.18)	198
9.3	GID-2666078 Version Control (SR3146.4.5)	199
9.3.1	GID-2666582 Status Change (SR3146.4.5.1)	200
9.3.2	GID-2666583 Version History (SR3146.4.5.3)	201
9.3.3	GID-2666584 Configurable Version Control (SR3146.6)	201
9.3.4	GID-2666585 Flexible Version Graph Assignment (SR3146.6.1)	201
9.3.5	GID-2666586 Flexible Definition of Approval Details (SR3146.6.7).....	202
9.4	Library Concept (SR3146.9.11+).....	202
9.4.1	GID-2666587 System Building Block Installation (SR3146.9.11.1)	202
9.4.2	GID-2666588 Custom Building Block (SR3146.9.11.3)	203

-

1 Introduction

This document details the requirements of the functions implemented related to recipe and workflow management with PharmaSuite Recipe and Workflow Designer.

Each requirement is composed of a name (e.g., Access control) and a unique identifier (e.g., GID-1234567) and is extended with its business attributes (GxP Relevance, Business Impact) and its compliance attribute (21 CFR Part 11 Relevance).

In some cases, additional context information is available, indicated in the document by a frame and a gray background color. This context information is related to the respective requirement, but not part of the formal requirement description.

The revision history lists the changes made to the document with the previous FactoryTalk PharmaSuite release as the comparison baseline. It provides individual tables for "Updated", "Added", and "Deleted" requirements that juxtapose the previous approved version with the new approved version of an item.

Typographical Conventions

This documentation uses typographical conventions to enhance the readability of the information it presents. The following kinds of formatting indicate specific information:

Bold typeface	Designates user interface texts, such as <ul style="list-style-type: none">▪ window and dialog titles▪ menu functions▪ panel, tab, and button names▪ box labels▪ object properties and their values (e.g., status).

2 Recipe and Workflow Management (SR3146+)

In PharmaSuite, recipe and workflow management is done by means of the **Designer Workbench (SR3146.9+)** tool ([GID-2666075](#)).

S95 defines a master recipe as follows: The master recipe is that level of recipe that is targeted to a process cell or a subset of the process cell equipment.

In its role as container for both the what (to manufacture) and the how (to manufacture), the master recipe is the place where the flow of the materials through the production process is specified. Thus, a master recipe typically contains all pharmaceutically relevant data required to support GxP-compliant production. Master recipes are under version and status control.

Apart from master recipes PharmaSuite supports the definition and execution of workflows that also follow the S88 structure of a master recipe (master workflow).

A building block component can be an element created by the recipe author on the Procedure, Unit Procedure, Operation and Phase structure levels. These building blocks are custom building blocks and under full control of the recipe author. A building block element provided by the supplier with PharmaSuite on the Phase structure level is a system building block and is usable but not changeable by the recipe author. A system building block is always in an **Approved** status and has no revision.

Custom building blocks on Unit Procedure and Operation structure level can be allowed to be used as a **Procedural structure - Group of Building Blocks (SR3146.9.4.8)** elements ([GID-2666461](#)).

Recipe and Workflow Designer of PharmaSuite is a graphical workbench for building and maintaining master recipes, master workflows, and their component building blocks. With its functions for status and version control, it covers the entire life cycle of a master recipe, master workflow, or custom building block. The workbench provides material flow control on the basis of material parameters, information flows for values from process parameters, privilege parameters for access rights, capability parameters, and equipment parameters.

For each structure level of a master recipe, master workflow, or building block, the system presents an SFC graph (sequential function chart).

PharmaSuite Recipe and Workflow Designer is available in two modes: as Recipe Designer and as Workflow Designer.

Most of the requirements that are related to Recipe Designer also apply to Workflow Designer. If a requirement applies only to a subset (Recipe Designer, Workflow Designer), this is explicitly noted within the requirement.

-
-

CONFIDENTIAL OBJECTS

The concept of confidential objects protects the intellectual property of recipes, workflows, custom building blocks, orders, ERP BOMs, and related data from unauthorized access. The system provides a specific access rights type to define access privileges that allow users to maintain protected recipes, workflows, and orders.

A master recipe or master workflow can be protected by assigning an explicit access privilege or inherit the access privilege from the used ERP BOM or the selected material (product). Orders and workflows based on a protected master recipe or master workflow inherit the access privilege automatically. A user without a protected-specific access privilege is not able to

- view a protected master recipe or master workflow,
- start a protected order or workflow for execution
- log in at a station on which a protected order or workflow runs,
- see a protected order or workflow in the Production Response Client
- print the batch report, weighing report, or workflow report of a protected order or workflow,
- open a change request that contains a protected object,
- see any transaction history data created by a protected order or workflow.

In case several confidential objects are linked with each other (e.g. a confidential building block is used in a recipe or a confidential workflow is assigned to an order), only the access privilege defined for the master object is required to access the linked objects with the master object as starting point. In order to link two confidential objects, they do not need to be protected by the same access privilege. The user, however, needs to have both access privileges.

Example scenario: A workflow and an order have different access privileges. A user with access to both can assign the workflow to the order. Afterwards another user who only has the access privilege of the order is able to print the batch report and can review exceptions of the workflow if the review is started with the order as starting point.

STRUCTURE OF THE DOCUMENT

This description is structured in the following sections:

- **Management of master recipes and master workflows (SR3146.4+)** requirements ([GID-2666032](#)).
- **Comparing master recipes, master workflows, and custom building blocks (SR3146.15+)** requirements ([GID-2666049](#))
- **Management of building blocks (SR3146.10+)** requirements ([GID-2666041](#))
- **Management of change requests (SR3146.12+)** requirements ([GID-2666053](#))
- **Master recipe report - Batch (SR3146.11+)** requirements ([GID-2666061](#))
- **Master workflow report (SR3146.13+)** requirements ([GID-2666068](#))
- **Designer workbench (SR3146.9+)** requirements ([GID-2666075](#))
- **Export/import of master recipes, master workflows, and custom building blocks (SR1075.1+)** requirements ([GID-2666080](#))

2.1 Recipe Designer (SR3071.6+)

2.1.1 *GID-2666446 Access control (SR3071.6.2)*

The access control of the Recipe Designer workbench enables the definition of user-specific access rights.

Upon user login, the Recipe Designer workbench checks if a user is authorized to edit recipes. If not, the system provides restricted access that does not allow to save manipulated data. Only status transitions of master recipes, custom building blocks, and change requests can be triggered by authorized users.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

2.2 Workflow Designer (SR3071.7+)

2.2.1 *GID-2666447 Access control (SR3071.7.2)*

The access control of the Workflow Designer workbench enables the definition of user-specific access rights.

Attribute	Value

3 Management of Master Recipes and Master Workflows (SR3146.4+)

As requirements have been restructured compared to the original DRS document, this section also contains requirements of other requirement groups than SR3146.4+.

This section provides the requirements relevant to the management of master recipes and master workflows:

- **Master recipe model - S88 (SR3146.9.3) requirements** ([GID-2666033](#))
- **Master workflow model - S88 (SR3146.9.12) requirements** ([GID-2666034](#))
- **Procedural structure (SR3146.9.4) requirements** ([GID-2666035](#))
- **Workbench object operations (SR3146.9.10+) requirements** ([GID-2666036](#))
- **Material flow control (MFC) (SR3146.9.8) requirements** ([GID-2666037](#))
- **Information flow (SR3146.9.9+) requirements** ([GID-2666038](#))
- **Standard statuses for version control (SR3146.6.4) requirements** ([GID-2666039](#))
- **Validator consistency checks (SR3146.9.4.3+) requirements** ([GID-2666040](#))

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

A master recipe has relationships to the following objects:

- Objects to build a procedural structure - building blocks ([GID-2666452](#)):
Procedure, unit procedure, operation, phase
- Capabilities to control the behavior during execution
Detachable - Operation (SR3146.9.5.9.1) capability ([GID-2667363](#))
Event-triggered (SR3146.9.5.9.2) capability ([GID-2667364](#))
Escalation-enabled (SR3146.9.5.9.3) capability ([GID-2667365](#))
Trigger-enabled (SR3146.9.5.9.4) capability ([GID-2667366](#))
Server-run (SR3146.9.5.9.5) capability ([GID-2667367](#))
Auto-startable (SR3146.9.5.9.6) capability ([GID-2667368](#))
Pause-enabled (SR3146.9.5.10.1) capability ([GID-2667370](#))
Detachable - Unit procedure (SR3146.9.5.10.2) capability ([GID-2667371](#))
Abort-and-reactivate-enabled (SR3146.9.5.10.3) capability ([GID-2667372](#))
- Resource master data
Material (process input (SR3146.9.5.1) data ([GID-2667346](#)), process output (SR3146.9.6.1) data ([GID-2667373](#)))
Equipment requirement (class) (SR3146.9.5.5) data ([GID-2667354](#))
Work center (SR3146.9.5.4) data ([GID-2667350](#))
Station (SR3146.9.5.8) data ([GID-2667352](#))
- **Material flow control** (SR3146.9.8) data ([GID-2666037](#))
- **Signature privilege** (SR3146.9.5.3) data ([GID-2667348](#))

The diagram illustrates the connections between the objects.

Figure 1: Objects relevant to recipe management

A master workflow has relationships to the following objects:

- Objects to build a procedural structure - building blocks ([GID-2666452](#)):
 - Procedure, unit procedure, operation, phase
- Resource master data
 - Material (process input (SR3146.9.5.1) data ([GID-2667346](#)), process output (SR3146.9.6.1) data ([GID-2667373](#)))
 - Equipment requirement (class) (SR3146.9.5.5) data ([GID-2667354](#))
 - Work center (SR3146.9.5.4) data ([GID-2667350](#))
 - Station (SR3146.9.5.8) data ([GID-2667352](#))
- Capabilities to control the behavior during execution
 - Detachable - Operation (SR3146.9.5.9.1) capability ([GID-2667363](#))
 - Event-triggered (SR3146.9.5.9.2) capability ([GID-2667364](#))
 - Escalation-enabled (SR3146.9.5.9.3) capability ([GID-2667365](#))
 - Trigger-enabled (SR3146.9.5.9.4) capability ([GID-2667366](#))
 - Server-run (SR3146.9.5.9.5) capability ([GID-2667367](#))
 - Auto-startable (SR3146.9.5.9.6) capability ([GID-2667368](#))
 - Pause-enabled (SR3146.9.5.10.1) capability ([GID-2667370](#))
 - Detachable - Unit procedure (SR3146.9.5.10.2) capability ([GID-2667371](#))
- Material flow control (SR3146.9.8) data ([GID-2666037](#))
- Signature privilege (SR3146.9.5.3) data ([GID-2667348](#))

The diagram illustrates the connections between the objects.

-

3.1 GID-2666033 Master Recipe Model - S88 (SR3146.9.3)

The applied master recipe model is S88-compliant and includes

- **header attribute (SR3146.9.3.1)** data ([GID-2666448](#)),
- a **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)), and
- the following formula-related data:
 - process input (SR3146.9.5)** data ([GID-2792498](#)),
 - process output (SR3146.9.6+)** data ([GID-2792499](#)),
 - process parameter (SR3146.9.7+)** data ([GID-2792500](#))

The model also applies to the respective top-level custom BB in support of **BB management (SR3146.10+)** capabilities ([GID-2666041](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.1.1 GID-2666448 Master Recipe - Header Attributes (SR3146.9.3.1)

The master recipe object supports the following header attributes:

- Basic data:
 - Identifier
 - Version
 - Description
 - Comparison baseline
Version is displayed as <major revision>.x.
 - Method
 - Method description
 - Reason for creation
 - Usage type (Production, Cost center)
 - Access privilege
- Status data:
 - Status
 - Valid from/until

- Additional data:
 - Planned quantity
 - Minimum quantity
 - Maximum quantity
 - Registration number
 - Review mode (Automatic, Manual) ([GID-2666449](#))
 - Comment
- Material (product):
 - Material identifier
 - [Material] Short description
 - ERP BOM alternative
 - ERP BOM base quantity
 - ERP BOM released
- Packaging Levels (editable with the **Packaging Level Data (SR3146.9.2.17.3)** editor ([GID-2667634](#))):
 - L6 (Meaning, Contained number, Inventory level, Hide during execution)
...
 - L9 (Meaning, Contained number, Inventory level, Hide during execution)

The attributes are maintained in the **header component-specific (SR3146.9.2.15)** property window ([GID-2667602](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.1.2 *GID-2666449 Master Recipe - Review Mode (SR3146.9.3.2)*

The system allows to define how an order that is based on a master recipe can be reviewed:

- Automatic
 - The order will be reviewed automatically.

The status of the order is automatically changed to **Reviewed**, once the order has been set to **Finished** and no exceptions with a risk other than **None** have been recorded for the order or any of its appended workflows.

See also **Automatic Review of an Order (SR1084.4.1.1)** in "Functional Requirement Specification Runtime Data Management" [A3] ([GID-2666084](#)).

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Manual

The order should be reviewed manually.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

3.2 GID-2666034 Master Workflow Model - S88 (SR3146.9.12)

The applied master workflow model is S88-compliant and includes

- **header attribute (SR3146.9.12.1)** data ([GID-2666450](#)),
- a **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)), and
- the following formula-related data:
 - process input (SR3146.9.5)** data ([GID-2792498](#)),
 - process output (SR3146.9.6+)** data ([GID-2792499](#)),
 - process parameter (SR3146.9.7+)** data ([GID-2792500](#))

The model also applies to the respective top-level custom BB in support of **BB management (SR3146.10+)** capabilities ([GID-2666041](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.2.1 GID-2666450 Master Workflow - Header Attributes (SR3146.9.12.1)

The master workflow object supports the following header attributes:

- Basic data:

Identifier

Version

Processing name

Preset with the master workflow identifier. Once the Processing name differs from the workflow identifier, the system does not change it automatically when the master workflow is copied or renamed.

Short description

Description

Comparison baseline

Version is displayed as <major revision>.x.

- Reason for creation
- Access privilege
- Status data:
 - Status
 - Valid from/until
- Additional data:
 - Review mode (Automatic, Manual) ([GID-2666449](#))
 - Type
 - One-click startable
 - Execution prefix
 - Production-relevant
 - Appendable during processing
 - Comment

The attributes are maintained in the **header component-specific (SR3146.9.2.15)** property window ([GID-2667602](#)).

The **Type** attribute defines to which group the one-click startable workflow belongs in the Cockpit of the Production Execution Client. See also **Grouping (SR3071.4.1.1.4)** in "Functional Requirement Specification Execution Framework" [A2] ([GID-2666084](#)).

The **Appendable during processing** attribute can only be set if the **Production-relevant** attribute is set.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.2.2 **GID-2666451 Master Workflow - Review Mode (SR3146.9.12.2)**

The system allows to define how a workflow can be reviewed:

- Automatic
 - The workflow be reviewed automatically.

The status of the workflow is automatically changed to **Reviewed**, once the workflow has been set to **Finished** and no exceptions with a risk level other than **None** have been recorded for the workflow.

See also **Automatic Review of an Order (SR1084.4.1.1)** in "Functional Requirement Specification Runtime Data Management" [A3] ([GID-2666084](#)).

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Manual
The workflow should be reviewed manually.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

3.3 GID-2666035 Procedural Structure (SR3146.9.4)

The supported procedural structure includes

- Building blocks ([GID-2666452](#))
(procedure, unit procedure, operation, phase)
- Links and branches ([GID-2666453](#))
(connector, loop, selection branch, simultaneous branch)
- Transitions ([GID-2666454](#))

For master workflows, only one procedure and one unit procedure can be defined.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.1 Procedural structure - Building blocks

The building blocks are:

- Procedure
The procedure is the highest level in the (recipe) hierarchy and defines the strategy for carrying out a major processing action such as making a batch. It is defined in terms of an ordered set of unit procedures.
- Unit procedure
According to S88, a unit procedure consists of an ordered set of operations that causes a contiguous production sequence to take place within a unit. Only one operation is presumed to be active in a unit at any time. An operation is carried to completion in a single unit. However, multiple unit procedures of one procedure may run concurrently, each in different units.
However, PharmaSuite allows modeling and execution of parallel operations in compliance with general SFC rules.
See also "Procedural Structure - Pre-defined Texts for Exceptions and Comments (SR3146.9.4.6)" ([GID-2666459](#)).

- Operation
An operation is an ordered set of phases that defines a major processing sequence that takes the material being processed from one state to another, usually involving a chemical or physical change. It is often desirable to locate operation boundaries at points in the procedure where normal processing can safely be suspended.
See also "Procedural Structure - Operation Type (SR3146.9.4.4)" ([GID-2666458](#)) and "Procedural Structure - Pre-defined Texts for Exceptions and Comments (SR3146.9.4.6)" ([GID-2666459](#)).
- Phase
The smallest element of procedural control that can accomplish a process-oriented task is a phase.
See also "Procedural Structure - Pre-defined Texts for Exceptions and Comments (SR3146.9.4.6)" ([GID-2666459](#))

3.3.2 Procedural structure - Links and Branches

The Designer workbench uses various types of links to connect building blocks:

- Connector
A link is a simple connector between two components.
- Loop
A loop is a specific type of link that points back to a previous step in the graph. The loop endpoint must be on the same sequence as the loop start point, so you cannot draw a loop out of a branch.
- Selection branch
A selection branch opens and closes two or more exclusive alternative sequences of steps in the graph.
During execution, only one of the sequences must be executed before an operator can proceed with the step that follows after the sequences have been joined again. The result of the transition conditions that precede a branch determines the subsequent step.
- Simultaneous branch
A simultaneous branch opens and closes two or more parallel sequences of steps in the graph. The leftmost sequence in the graph is the first to be displayed during execution according to the default execution order of SFCs (left to right).
During execution, all parallel sequences must be executed before an operator can proceed with the step that follows after the sequences have been joined again.

3.3.3 Procedural structure - Transitions

A transition consists of a condition that defines which step is the next to be executed when there is more than one potential successor step. Thus, a transition predetermines which step to choose in a selection branch during execution or whether a loop needs to be executed. Transitions with conditions and or a description are equipped with transition identifiers. Any transition can be locked. For details about transition conditions, see "Procedural Structure - Conditions (SR3146.9.4.2)" ([GID-2667617](#)), "Locking of Transitions (SR3146.9.14+)" ([GID-2792502](#)), and "Expressions for Transitions (SR3146.9.9.4.2)" ([GID-2667617](#)).

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.3.4 GID-2666455 Procedural structure - Parallel execution (SR3146.9.4.1)

Building blocks can be executed in parallel.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.5 GID-2666456 Procedural structure - Conditions (SR3146.9.4.2)

Transitions can include conditions based on calculations.

- Transition conditions are based on the results of a previous step.
- Each transition is preset with a default condition, which defines that the step(s) preceding a transition must have been finished before the step(s) after the transition can be started. Transition conditions can be edited in an **Expression editor (SR3146.9.9.4)** UI element ([GID-2666579](#)).
- Non-default conditions are marked by an indicator.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.6 GID-2666457 Procedural structure - Hidden phase (SR3146.9.4.5)

During recipe or workflow authoring, the system provides a Hidden Phase, which is a structural phase that is required to build adjacent branches or loops in valid SFC syntax. Thus, it is only visible in Recipe and Workflow Designer and does not appear as executable phase during order or workflow processing.

Two different Hidden Phases are available, one for the execution on a client and one for the execution on a server.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Low
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.7 GID-2666458 Procedural structure - Operation type (SR3146.9.4.4)

Does not apply to Workflow Designer.

Operations are equipped with a **Dispense** attribute that marks an operation as being intended for dispensing if set. The recipe author has to define the operation type.

- The default setting is **non-Dispense**.

- The **Dispense** attribute is automatically populated to the superordinate unit procedure. For unit procedures, the **Dispense** attribute is read-only.

The following rules apply:

- A Dispense operation cannot be combined with other non-Dispense operations.
- A Dispense unit procedure must contain exactly one Dispense operation.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.8 *GID-2666459 Procedural structure - Pre-defined texts for exceptions and comments (SR3146.9.4.6)*

Phases, operations, and unit procedures are equipped with the Operator exception texts and Reviewer exception texts attributes. They allow to select two lists of pre-defined texts to be appended to the exception description and exception comment description during execution and review by exception. The recipe or workflow author must select the lists to be used.

By default, no lists are defined.

The attributes are maintained in the **element component-specific (SR3146.9.2.12)** property window ([GID-2667603](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.9 *GID-2666460 Procedural structure - Hide in batch/workflow report (SR3146.9.4.7)*

Phases can be flagged to not appear with their sub-reports in the batch or workflow report. This can shorten the size of reports.

In case the phase has an exception reference, the phase sub-report will be part of the report, regardless of the configuration.

By default, the flag is not set.

The attribute is maintained in the **element component-specific (SR3146.9.2.12)** property window ([GID-2667603](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
-

3.3.10 GID-2666461 Procedural structure - Group of Building Blocks (SR3146.9.4.8)

Unit procedures and operations can be foreseen to be used as groups of building blocks, a unit procedure as an operation group and an operation as a phase group. During custom building block authoring, the recipe author defines if a group usage is possible.

Allowing a custom building block to be used as a group increases the reusability for this building block. The building block can be used as single element on its own level or as group of building blocks on the next lower level. The concept allows to approve building blocks with a setup how it is used that applies to most cases. Once used, further elements can be added before, after, and parallel to the group without having to approve the group part again or to increase the amount of unit procedures or operations, respectively, which may require further configuration or instructions for the executing operator to handle them correctly, when running unit procedures at the same work center.

During processing on the shop floor, the group usage is not visible. An element of a group is executed in the same way as a single element.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11 Process Inputs (SR3146.9.5)

According to S88, process inputs are supported as part of the formula.

The attributes of process input parameters are maintained in the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).

3.3.11.1 GID-2667346 PROCESS INPUTS - MATERIAL (SR3146.9.5.1)

Materials are supported as process input parameters.

The minimum and maximum numbers of process inputs are taken over from the phase building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.2 GID-2667347 PROCESS INPUTS - MATERIAL ATTRIBUTES (SR3146.9.5.1.1)

The material input parameters support the following attributes:

- Basic Data

- Lock

- Material identifier (read-only)

- [Material] Short description (read-only)

- Planned quantity mode (None, As defined, As produced)

- Planned quantity (with UoM)

- Usage type (e.g. Input, Output) (read-only)

- Usage name

- MFC-relevant (Yes/No), default = No

- Position

- Weighing sequence

- Hierarchy level (read-only)

- Path (read-only)

- Weighing and Production

- Default weighing method

- Allowed weighing methods

- Tolerances (lower and upper, absolute and relative)

- Target subplot status (---, Blocked, Quality Inspection, Unrestricted)

- Weighing material type

- Planned potency

- Fixed quantity (Yes/No)

- Target weight

- (not relevant to material inputs and ignored during execution)

- Target weight tolerances (lower and upper, absolute and relative)

- (not relevant to material inputs and ignored during execution)

- Packaging Levels (editable with the

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- **Packaging Level Data (SR3146.9.2.17.3)** editor ([GID-2667634](#)):
(not relevant to material inputs and ignored during execution)
 - L0 (Meaning, Contained number, Inventory level, Hide during execution)
(the Contained number attribute is not relevant to the L0 level)
 - ...
 - L5 (Meaning, Contained number, Inventory level, Hide during execution)

- The **Basic** attributes are displayed in both the horizontal and vertical panes of the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).
- Materials can be flagged as MFC-relevant and thus be available for MFC management ([GID-2666037](#)).
- Weighing-specific attributes can be defined.
Weighing methods and tolerances are populated automatically from the material.
Weighing material type and planned potency are preset with default values and will be populated into the respective list of materials item.
- Target subplot status is populated automatically from the material. As process input it defines the status of the temporary subplot created at batch identification.
- Positions of MFC-relevant materials (process input) can be defined.
- For master recipes based on an ERP BOM, the ERP BOM items can be assigned as material parameters via **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#)).

MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.3 GID-2667348 PROCESS INPUTS - SIGNATURE PRIVILEGE (SR3146.9.5.3)

Signature privileges are supported as process input parameters.

- They apply to phase-specific exceptions, explicit capability-related exceptions, phase actions, and the phase completion.
- The correlation between signature privilege and exception-specific risk level must be defined manually.
- Per PharmaSuite installation, a default signature privilege can be configured which will be used if no signature privilege has been assigned to a phase for a specific risk level.

-

3.3.11.6 GID-2667351 PROCESS INPUTS - WORK CENTER ATTRIBUTES (SR3146.9.5.4.1)

The work center input parameters support the following attributes:

- Identifier
- Description
- Storage area

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.7 GID-2667352 PROCESS INPUTS - STATION (SR3146.9.5.8)

Stations are supported as process input parameters on operation level.

The phases of the operation have to be processed at one of the defined stations.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.8 GID-2667353 PROCESS INPUTS - STATION ATTRIBUTES (SR3146.9.5.8.1)

The station input parameters support the following attributes:

- Identifier
- Description
- Work center

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.9 GID-2667354 PROCESS INPUTS - EQUIPMENT REQUIREMENT (CLASS) (SR3146.9.5.5)

Equipment requirements of the **Class** type are supported as process input parameters.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.10 GID-2667355 PROCESS INPUTS - REQUIREMENT ATTRIBUTES (CLASS) (SR3146.9.5.5.1)

The equipment class input parameters support the following attributes:

- Read-only:

- Identifier
- Short description
- Description
- Level
- Type (e.g. Class, Item)

- Editable:

- BOE position
- Usage name

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.11 GID-2667356 PROCESS INPUTS - EQUIPMENT REQUIREMENT (PROPERTY TYPE) (SR3146.9.5.6)

Property types are supported as part of an already existing equipment requirement (e.g. equipment class).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.12 GID-2667357 PROCESS INPUTS - REQUIREMENT ATTRIBUTES (PROPERTY TYPE) (SR3146.9.5.6.1)

The (equipment) property type input parameters support the following attributes:

- Editable:

- Identifier (unique)
- Description

Rule (only editable for property types of the **Specification** usage type and of the **Runtime** usage type, not editable for property types of the **Automation** or **Historian** usage type, representation always shows the related property type identifier)

Read-only:

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management

-

Type (Dependent, Independent)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.13 GID-2667358 PROCESS INPUTS - EQUIPMENT REQUIREMENT (RULE) (SR3146.9.5.7)

Rules are supported as part of an already existing equipment requirement.

Flexible rules apply to a single equipment entity and the parent entity of an equipment entity group whereas conditional rules apply to a single equipment entity and to all entities of an equipment entity group.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.14 GID-2667359 PROCESS INPUTS - REQUIREMENT ATTRIBUTES (RULE) (SR3146.9.5.7.1)

The rules of an equipment class input parameter supports the following attributes:

- Editable (with the **Expression editor (SR3146.9.9.4)** UI element ([GID-2666579](#))):

 - Identifier (unique)
 - Description
 - Rule
 - Read-only:

Type (Flexible, Conditional rule (group-enabled))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.15 GID-2667360 PROCESS INPUTS - TRANSITION (SR3146.9.5.11)

Transitions are supported as process input parameters.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)
-
-
-

3.3.11.16 GID-2667361 PROCESS INPUTS - TRANSITION ATTRIBUTES (SR3146.9.5.11.1)

The transition input parameters support the following attributes:

- Identifier
- Description
- Condition

Transition conditions can be edited in an Expression editor (SR3146.9.9.4) UI element ([GID-2666579](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.17 GID-2667362 PROCESS INPUTS - CAPABILITIES ON OPERATION LEVEL (SR3146.9.5.9)

Capabilities are supported as process input parameters for operations.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.18 GID-2667363 PROCESS INPUTS - DETACHABLE CAPABILITY - OPERATION (SR3146.9.5.9.1)

The system provides the Detachable capability, which supports the following attributes:

- Read-only:
 - Identifier
 - Action
- Editable:
 - Exception enabled
 - Risk assessment
 - Exception text

This capability allows an operator to detach a running operations from its work center and station (see **Detaching an Operation (SR1089.6.1+)** in "Functional Requirement Specification Execution Framework" [A2] ([GID-2666084](#))).

This capability cannot be used in Dispense operations.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.19 GID-2667364 PROCESS INPUTS - EVENT-TRIGGERED CAPABILITY (SR3146.9.5.9.2)

The system provides the Event-triggered capability, which supports the following attributes:

- Read-only:
 - Identifier
 - Action (New run, Cancel run, Cancel all runs, Remove template)
- Editable (for each action):
 - Exception enabled
 - Risk assessment
 - Exception text

This capability cannot be used in Dispense operations.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.20 GID-2667365 PROCESS INPUTS - ESCALATION-ENABLED CAPABILITY (SR3146.9.5.9.3)

The system provides the Escalation-enabled capability, which supports the following attributes:

- Read-only:
 - Identifier
 - System action (Run created, Run due reminder, Run overdue, Run expired, Finish due reminder, Finish overdue)
- Editable:
 - Duration before action (since trigger) (not editable for the **Run created** system action)
 - Automatic exception enabled (not editable for the **Run created** system action)
 - Risk assessment (not editable for the **Run created** system action)
 - Exception text (not editable for the **Run created** system action)
 - Alarm enabled
 - Notification text

This capability is only supported for event-triggered operations.
This capability cannot be used in Dispense operations.

It is not expected that HTML tags are used as part of the notification or exception text. This means that the notification text will be shown as plain text and HTML formatting will be not interpreted by the notification panel.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.21 GID-2667366 PROCESS INPUTS - TRIGGER-ENABLED CAPABILITY (SR3146.9.5.9.4)

The system provides the Trigger-enabled capability, which supports the following attributes:

- Read-only:
 - Identifier
- Editable (for each new line item):
 - Trigger (unique)
 - Description
 - Trigger phase

The system allows to add multiple line items for multiple trigger references.

This capability is only supported for event-triggered operations.
This capability cannot be used in Dispense operations.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.22 GID-2667367 PROCESS INPUTS - SERVER-RUN CAPABILITY (SR3146.9.5.9.5)

The system provides the Server-run capability, which supports the following attributes:

- Read-only:
- Identifier

This capability cannot be combined with other capabilities.

This capability cannot be used in Dispense operations.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.23 GID-2667368 PROCESS INPUTS - AUTO-STARTABLE CAPABILITY (SR3146.9.5.9.6)

The system provides the Auto-startable capability, which supports the following attributes:

- Read-only:
- Identifier

This capability cannot be used in Dispense operations.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.24 GID-2667369 PROCESS INPUTS - CAPABILITIES ON UNIT PROCEDURE LEVEL (SR3146.9.5.10)

Capabilities are supported as process input parameters for unit procedures.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.25 GID-2667370 PROCESS INPUTS - PAUSE-ENABLED CAPABILITY (SR3146.9.5.10.1)

The system provides the Pause-enabled capability, which supports the following attributes:

- Read-only:
 - Identifier
 - Action
- Editable:
 - Exception enabled
 - Risk assessment
 - Exception text

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

3.3.11.26 GID-2667371 PROCESS INPUTS - DETACHABLE CAPABILITY - UNIT PROCEDURE (SR3146.9.5.10.2)

The system provides the Detachable capability, which supports the following attributes:

- Read-only:
 - Identifier
 - Action
- Editable:
 - Exception enabled
 - Risk assessment
 - Exception text

This capability allows an operator to detach a running unit procedure from its work center and station (see **Detaching a Unit Procedure (SR1089.8.4+)** in "Functional Requirement Specification Execution Framework" [A2] ([GID-2666084](#))).

This capability cannot be used in Dispense unit procedures.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.11.27 GID-2667372 PROCESS INPUTS - ABORT-AND-REACTIVE-ENABLED CAPABILITY (SR3146.9.5.10.3)

The system provides the Detachable capability, which supports the following attributes:

- Read-only:
 - Identifier
 - Action
- Editable:
 - Exception enabled
 - Risk assessment
 - Exception text

This capability allows an operator to detach a running unit procedure from its work center and station (see **Detaching a Unit Procedure (SR1089.8.4+)** in "Functional Requirement Specification Execution Framework" [A2] ([GID-2666084](#))).

This capability cannot be used in Dispense unit procedures.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.12 Process Outputs (SR3146.9.6+)

According to S88, process outputs are supported as part of the formula.

The attributes of process output parameters are maintained in the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).

3.3.12.1 GID-2667373 PROCESS OUTPUTS - MATERIAL (SR3146.9.6.1)

Materials in the sense of product are supported as process output parameters.

The minimum and maximum numbers of process outputs are taken over from the phase building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.12.2 GID-2667374 PROCESS OUTPUTS - MATERIAL ATTRIBUTES (SR3146.9.6.1.1)

The material output parameters support the following attributes:

- Basic Data
 - Lock
 - Material identifier (read-only)
 - [Material] Short description (read-only)
 - Planned quantity mode (None, As defined)
 - Planned quantity (with UoM)
 - Usage type (e.g. Input, Output) (read-only)
 - Usage name
 - MFC-relevant (Yes/No), default = No
 - Position
 - Hierarchy level (read-only)
 - Path (read-only)

- Weighing and Production
 - Default weighing method
 - Allowed weighing methods
 - Tolerances (lower and upper, absolute and relative)
 - Target subplot status (---, Blocked, Quality Inspection, Unrestricted)
 - Weighing material type
 - (not relevant to material outputs and ignored during execution)
 - Planned potency
 - (not relevant to material outputs and ignored during execution)
 - Fixed quantity (Yes/No)
 - (not relevant to material outputs and ignored during execution)
 - Target weight
 - Target weight tolerances (lower and upper, absolute and relative)
- Packaging Levels (editable with the **Packaging Level Data (SR3146.9.2.17.3)** editor ([GID-2667634](#))):
 - L0 (Meaning, Contained number, Inventory level, Hide during execution)
 - (the Contained number attribute is not relevant to the L0 level)
 - ...
 - L5 (Meaning, Contained number, Inventory level, Hide during execution)

Materials can be flagged as MFC-relevant and thus be available for MFC management ([GID-2666037](#)).

Target subplot status is populated automatically from the material.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13 Process Parameters (SR3146.9.7+)

According to S88, process parameters are supported as part of the formula.

Process parameters and their attributes are taken over from the phase building block and parameter class, respectively. Except for the **Instruction table (SR3146.9.7.5)** process parameters ([GID-2667379](#)) and the **Instruction link (SR3146.9.7.6)** process parameters ([GID-2667380](#)), which are provided by the framework and are available for each phase building block.

For phases located within the same operation and across operations, the output of a phase can be used as input of a parameter attribute of another phase.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Inputs can be edited by an **Expression editor (SR3146.9.9.4)** UI element ([GID-2666579](#)).

The phase that provides the output must have been processed before the process step that uses the output as input.

Phases and operations may or may not be passed (e.g. in simultaneous branches). If they are not passed, the output is Null. This needs to be reflected in the referencing expression.

3.3.13.1 GID-2667375 PROCESS PARAMETERS - CLASSIFICATION (SR3146.9.7.1)

For process parameters, the following classifications are available:

- Critical quality attribute
- Critical process parameter
- Key quality attribute
- Key process parameter
- General quality attribute
- General process parameter

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13.2 GID-2667376 DYNAMIC CREATION OF PROCESS PARAMETERS (SR3146.9.7.4)

The **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)) for process parameters supports the dynamic creation of process parameters for specific phases during recipe and workflow authoring. The availability of a parameter is controlled by the current phase.

When a new parameter bundle is created, the recipe or workflow author defines the bundle identifier.

Process parameters that have been created in this way can also be deleted within the Parameter Panel.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13.2.1 GID-2667377 BUNDLE PROCESS PARAMETERS (SR3146.9.7.4.1)

For the master process parameter of a bundle, its internal identifier is populated from the bundle identifier.

For all other process parameters of the bundle, their internal identifier is a concatenation of the bundle identifier and the process parameter name.

- Management of Master Recipes and Master Workflows (SR3146.4+)
-
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13.2.2 GID-2667378 BUNDLE OUTPUT VARIABLES (SR3146.9.7.4.2)

For all output variables of the same bundle, the output variable identifier is a concatenation of the bundle identifier and the output variable name.

The naming convention applies to PharmaSuite product phases.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13.3 GID-2667379 INSTRUCTION TABLE PROCESS PARAMETERS (SR3146.9.7.5)

The **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)) for process parameters provides instruction table process parameters for each phase during recipe and workflow authoring as framework parameter bundle.

When a new instruction table is created, the recipe or workflow author defines the identifier of the process parameter. A maximum of 10 instruction tables with 50 rows per table is supported. The instruction table is displayed in the **Phase Preview (SR3146.9.2.11)** UI element ([GID-2666578](#)) in Recipe and Workflow Designer. It is not displayed in the **Preview mode** of a phase building block. For the definition-specific process parameter of an instruction table, its internal identifier is populated from the initial table identifier.

For all text-specific process parameters of an instruction table, their internal identifiers are a concatenation of the internal table identifier and text identifier.

The sequence of text-specific process parameters of an instruction table can be changed.

Instruction table process parameters that have been created in this way can also be deleted within the Parameter Panel.

For server-run phases, instruction table process parameters cannot be created since the phases do not have a graphical representation (UI).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.13.4 GID-2667380 INSTRUCTION LINK PROCESS PARAMETERS (SR3146.9.7.6)

The **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)) for process parameters provides instruction link process parameters for each phase during recipe and workflow authoring as framework parameter bundle.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

When a new instruction link is created, the recipe or workflow author defines the identifier of the process parameter. A maximum of 10 instruction link parameters per phase is supported. Each instruction link parameter supports a maximum of 10 instruction link URLs. The instruction links are displayed in the **Phase Preview (SR3146.9.2.11)** UI element ([GID-2666578](#)) in Recipe and Workflow Designer. They are not displayed in the **Preview mode** of a phase building block.

Instruction link process parameters that have been created in this way can also be deleted within the Parameter Panel.

For server-run phases, instruction link process parameters cannot be created since the phases do not have a graphical representation (UI).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.14 Locking of Parameters (SR3146.9.13+)

Locking and unlocking of parameters is supported.

3.3.14.1 GID-2667381 LOCKED PARAMETERS (SR3146.9.13.1)

Parameters can be locked and unlocked as long as the related master recipe or master workflow is not in the **Verification** or **Valid (SR3146.6.4)** statuses ([GID-2666039](#)) or the custom BB is not in the **Verification** or **Approved (SR3146.10.1)** statuses ([GID-2666044](#)).

The attributes of a locked parameter are read-only for this specific occurrence. They can again be updated when the parameter is unlocked.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.14.2 GID-2667382 LOCKING OF BUNDLE PARAMETERS (SR3146.9.13.3)

As soon as at least one process parameter of a **bundle process parameter (SR3146.9.7.4.1)** parameter ([GID-2667377](#)) is locked, the process parameter can no longer be removed.

Thus, unlocked bundle parameters still can be removed from and new bundle process parameters still can be added to a custom building block in the **Verification** or **Approved (SR3146.10.1)** statuses ([GID-2666044](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

3.3.14.3 GID-2667383 FROZEN PARAMETERS (SR3146.9.13.2)

A frozen parameter of a master recipe, master workflow, or custom BB is permanently locked if the related source custom BB was in the **Verification** or **Approved (SR3146.10.1)** statuses ([GID-2666044](#)) at the time when it was copied for usage. Thus, the related attributes cannot be updated anymore.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.15 Locking of Transitions (SR3146.9.14+)

Locking and unlocking of transitions is supported.

3.3.15.1 GID-2667384 LOCKED TRANSITIONS (SR3146.9.14.1)

Transitions can be locked and unlocked as long as the related master recipe or master workflow is not in the **Verification** or **Valid (SR3146.6.4)** statuses ([GID-2666039](#)) or the custom BB is not in the **Verification** or **Approved (SR3146.10.1)** statuses ([GID-2666044](#)).

The attributes of a locked transition are read-only for this specific occurrence. They can again be updated when the transition is unlocked. The identifier of a transition is always read-only regardless of whether the transition is locked or not, if the transition is part of a used custom building block in a read-only status.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.3.15.2 GID-2667385 FROZEN TRANSITIONS (SR3146.9.14.2)

A frozen transition of a master recipe, master workflow, or custom BB is permanently locked if the related source custom BB was in the **Verification** or **Approved (SR3146.10.1)** statuses ([GID-2666044](#)) at the time when it was copied for usage. Thus, the related attributes cannot be updated anymore.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4 Workbench Object Operations (SR3146.9.10+)

The Designer workbench supports specific object operations for:

- master recipe (SR3146.9.10.1) objects ([GID-2666467](#)),
- master workflows (SR3146.9.10.9) objects ([GID-2666468](#)),
- element (SR3146.9.10.6) objects ([GID-2666469](#)),
- custom building block (SR3146.9.10.7) objects ([GID-2666043](#)), and
- change request (SR3146.12+) objects ([GID-2666053](#)).

Operations for links and transitions link are also supported.

3.4.1 GID-2666467 Workbench Object Operations - Master Recipe (SR3146.9.10.1)

The following operations are supported for master recipes:

- Create new (product material-related) master recipe ([GID-2667386](#))
- Open existing (see **Open (SR3146.9.2.20+)** dialog ([GID-2666571](#)))
- View locked master recipe ([GID-2667387](#))
- Save (current or all) master recipe
- Copy (Save as...)

For master recipes that are protected by an access privilege: The access privilege of the original master recipe is passed on to the new master recipe. In the default configuration, the access privilege cannot be changed.
- Rename
- Delete
- Create building block from selected object

For master recipes that are protected by an access privilege: The access privilege of the original master recipe is passed on to the new building block. In the default configuration, the access privilege cannot be changed.
- Insert existing procedure BB
- Replace Material (Product) (SR3146.9.10.11) ([GID-2666472](#))
- Status-related operations (see Version Control (SR3146.4.5) ([GID-2666078](#)))
- Report (see Master Recipe Report - Batch (SR3146.11+) ([GID-2666061](#)))
- Statistics (SR3146.9.2.18) ([GID-2666581](#))
- Close (current or all)

Master recipes can either be saved under a new identifier or under the same identifier and a new version number.

- Management of Master Recipes and Master Workflows (SR3146.4+)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.1.1 GID-2667386 WORKBENCH OBJECT OPERATIONS - NEW MASTER RECIPE DIALOG (SR3146.9.10.1.2)

When a new master recipe is created, first, the recipe author defines the product material of the master recipe. The list of available materials shall be restricted by the access privileges of the logged-in user. The material identifier is populated as master recipe identifier. The master recipe identifier is editable. The system shall allow to select an access privilege for the protection of the master recipe from unauthorized access for users with access privileges that allow to maintain protected recipes. The list of available access privileges shall be restricted to the access privileges of the logged-in user. If an access privilege is defined for the material, this access privilege is passed on to the new master recipe. In the default configuration, the access privilege cannot be changed.

For master recipes based on an ERP BOM, the ERP BOM is selected from the **library for materials (ERP BOM) (SR3146.9.2.4.2)** UI element ([GID-2667589](#)). The **material process input (SR3146.9.5.1)** data ([GID-2667346](#)) defined within Recipe Designer must match the materials, positions, and quantities set down in the ERP BOM. The ERP BOM items are available via **Setlist (SR3146.9.2.9.1)** UI element ([GID-2667595](#))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.1.2 GID-2667387 WORKBENCH OBJECT OPERATIONS - VIEW LOCKED MASTER RECIPE (SR3146.9.10.1.4)

If a master recipe is locked by another user, the system allows to view the master recipe without the possibility to change it.

The master recipe can be copied (save as). Operations that do not change a master recipe are also available (e.g. status history, print report, graph pagination, statistics).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.2 GID-2666468 Workbench Object Operations - Master Workflow (SR3146.9.10.9)

The following operations are supported for master workflows:

- Create new master workflow ([GID-2667388](#))
- Open existing (see **Open (SR3146.9.2.20+)** dialog ([GID-2666571](#)))

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- View locked master workflow ([GID-2667389](#))

- Save (current or all) master workflow

- Copy (Save as...)

For master workflows that are protected by an access privilege: The access privilege of the original master workflow is passed on to the new master workflow. In the default configuration, the access privilege cannot be changed.

- Rename

- Delete

- Create building block from selected object

For master workflows that are protected by an access privilege: The access privilege of the original master workflow is passed on to the new building block. In the default configuration, the access privilege cannot be changed.

- Insert existing procedure BB

- Status-related operations (see Version Control (SR3146.4.5) ([GID-2666078](#)))

- Master Workflow Report (SR3146.13+) ([GID-2666068](#))

- Statistics (SR3146.9.2.18) ([GID-2666581](#))

- Close (current or all)

Master workflows can either be saved under a new identifier or under the same identifier and a new version number.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.2.1 GID-2667388 WORKBENCH OBJECT OPERATIONS - NEW MASTER WORKFLOW DIALOG (SR3146.9.10.9.1)

When a new master workflow is created, first, the workflow author defines the master workflow identifier.

The system shall allow to select an access privilege for the protection of the master workflow from unauthorized access for users with access privileges that allow to maintain protected workflows. The list of available access privileges shall be restricted to the access privileges of the logged-in user.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.2.2 GID-2667389 WORKBENCH OBJECT OPERATIONS - VIEW LOCKED MASTER WORKFLOW (SR3146.9.10.9.3)

If a master workflow is locked by another user, the system allows to view the master workflow without the possibility to change it.

The master workflow can be copied (save as). Operations that do not change a master workflow are also available (e.g. status history, print report, graph pagination, statistics).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.3 GID-2666469 Workbench Object Operations - Element (SR3146.9.10.6)

The following operations are supported for elements that are derived from building blocks (e.g. recipe element within a recipe, workflow element within a workflow, BB element within a custom BB). They apply to elements on all levels (procedure, unit procedure, operation, phase).

- Create new (e.g. dummy phase)
- Insert element from an existing BB or from the Graph Clipboard via the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#))
It is not possible to insert a group of building blocks into its own graph.
- Copy selected element(s), see **Copy & Paste Function (SR3146.9.1.6+)** feature ([GID-2666568](#))
- Paste previously copied element(s), see **Copy & Paste Function (SR3146.9.1.6+)** feature ([GID-2666568](#))
- Create <same BB level> from selected element
For elements that are part of a master recipe, master workflow, or custom building block that is protected by an access privilege: The access privilege of the header object is passed on to the new building block. In the default configuration, the access privilege cannot be changed.
- Create <next higher BB level> from selected element(s)
For elements that are part of a master recipe, master workflow, or custom building block that is protected by an access privilege: The access privilege of the header object is passed on to the new building block. In the default configuration, the access privilege cannot be changed.
- Replace (overrides parameters) via the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#))
- Smart replace via the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#))
(see **Workbench Object Operations - Smart Replace (SR3146.9.10.10)** operation ([GID-2666471](#)))
- Rename
- Delete selected elements

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Connect elements manually. However, Recipe and Workflow Designer inserts possible or required transitions ([GID-2666453](#)) and required selection/simultaneous branches ([GID-2666453](#)) automatically.
- Insert branch with exclusive alternative steps (XOR). A selection branch ([GID-2666453](#)) and required transitions ([GID-2666454](#)) connect the elements.
- Insert loop. A loop, required selection branches, and a transition connect the elements.
- Insert branch with parallel steps (AND). A simultaneous branch ([GID-2666453](#)) connects the elements.
- If a BB is created from a selected element, the new building block is available for selection from the Universe (SR3146.9.2.4+) UI element ([GID-2666572](#)) It can be made available for the Setlist (SR3146.9.2.9) UI element ([GID-2666573](#)) and can also be opened automatically in a new tab. Available revisions of custom building blocks starting with the same identifier are listed for information.
- Insert sequence. A link ([GID-2666453](#)) and a transition ([GID-2666454](#)) connect the elements.
- Select all elements and transitions along with or without links.
- Find elements by searching for a specific string.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.4 Workbench Object Operations - Link and Transition

The following operations are supported for links ([GID-2666453](#)) and transitions ([GID-2666454](#)):

- Delete links and transitions selected in a graph.
- Select all links and transitions along with all elements in the current Graph Window.
- Select all transitions along with all elements in the current Graph Window.
- Select all links in the current Graph Window.

3.4.5 GID-2666471 Workbench Object Operations - Smart Replace (SR3146.9.10.10)

With the **Smart replace** operation, building blocks (BBs) and elements of recipes, workflows, and BBs are replaced by other BBs from the Setlist. The operation differs from the **Replace** operation in its parameter and transition handling. It merges the parameter data and transitions of the replacing (new) building block or system phase into the parameter data and transitions of the (old) building block to be replaced. For matching, the system uses the identifiers that the elements have when the element (group) is moved to a read-only status. The same matching behavior applies for transitions.

A single building block can only be replaced by a group of building blocks and vice versa using the **Replace** operation, not the **Smart replace** operation.

If the new building block is a custom building block (cBB) and in the **Draft** or **Approved** status ([GID-2666044](#)), the parameters are merged depending on their type, **locking state**

(SR3146.9.13.1) [\(GID-2667381\)](#), and existence; transitions are merged depending on their **locking state** (SR3146.9.14.1) [\(GID-2667384\)](#) and existence.

- Merge strategy for **process parameter** (SR3146.9.7+) data [\(GID-2792500\)](#) and their attributes

New cBB	Old cBB	Resulting building block after smart replace
Parameter is permanently locked (Frozen).	Parameter is permanently locked (Frozen).	The new parameter is taken over , it is still permanently locked (Frozen). The parameter of the old cBB is ignored.
	Parameter is locked for this specific occurrence on the BB, but could be unlocked.	
	Parameter is not locked .	
Parameter is locked for this specific occurrence on the BB, but could be unlocked.	Parameter is permanently locked (Frozen).	The new parameter is taken over , it is locked for this specific occurrence on the BB, but could be unlocked. The parameter of the old cBB is ignored.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

New cBB	Old cBB	Resulting building block after smart replace
	Transition is not locked .	
Transition is locked for this specific occurrence on the BB, but could be unlocked.	Transition is permanently locked (Frozen).	The new transition is taken over , it is locked for this specific occurrence on the BB, but could be unlocked. The transition of the old cBB is ignored. This combination is not relevant to change request (SR3146.12+) objects (GID-2666053).
	Transition is locked for this specific occurrence on the BB, but could be unlocked.	
	Transition is not locked .	
Transition is not locked .	Transition is permanently locked (Frozen).	The previous transition is taken over , but is not locked . The transition of the new cBB is ignored.
	Transition is locked for this specific occurrence on the BB, but could be unlocked.	The previous transition is taken over , it is still locked for this specific occurrence on the BB, but could be unlocked. The transition of the new cBB is ignored.
	Transition is not locked .	The previous transition is taken over , it is still not locked . The transition of the new cBB is ignored.
Transition in any locking state.	No transition present.	The new transition is taken over in its locking state.
No transition is present.	Transition in any locking state.	The previous transition does no longer exist.

Applies to all parameters and transitions:

- If a building block on a higher level (e.g. operation level) is replaced using the Smart Replace operation and the new cBB contains a new recipe element, workflow element, BB element, or transition that did not exist in the previous version, this new element or transition is taken over including all of its parameter and transition configurations.

Applies to material parameters:

- If a building block is replaced using the regular Replace operation or is added to a procedural structure (SR3146.9.4) hierarchy (page 13), all of its already assigned material parameters are still taken over. They are only ignored in case the Smart replace operation is used.

Applies to parameters if a system building block (phase) is replaced with the Smart replace operation:

- The new system phase cannot have locked parameters or bundle parameters. The system always retains the maintained parameters of the replaced element with their values. Only those process parameters (except bundle parameters) of the old system phase that are not present in the new system phase will not be part of the resulting system phase.

Applies to all bundle parameters of the old building block:

- The system does not differentiate between bundle parameters added manually to a phase after adding the building block containing this phase and bundle parameters that were already part of the building block before it was added. Bundle parameters of the old building block that are not present in the new building block will still be part of the resulting building block. The maximum number of bundle parameters cannot be exceeded.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.4.6 *GID-2666472 Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)*

Does not apply to Workflow Designer.

With the **Replace material (product)** operation, the material (product) of an existing master recipe, including its related ERP BOM (if applicable), can be replaced.

The system shall only allow to select ERP BOMs and materials whose access privilege matches the access privilege of the logged-in user.

If an access privilege is defined for the new ERP BOM or material that differs from the access privilege of the master recipe, the new access privilege is passed on to the master recipe.

Before the new material can be selected, the system requests a confirmation by the recipe author since the **Replace material (product)** operation can lead to a significant number of changes in the master recipe data.

Along with replacing the material (product), the system automatically updates the following data:

- Material (product) of the master recipe's header attributes
- Material of the final MFC output
- Material of the MFC-relevant material input and output parameters (that used the previous material)

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Packaging levels (Meaning, Contained number) of the material parameters (L0, ..., L5) (that used the previous material)
- Only if the new material (product) is related to an ERP BOM:
- ERP BOM items in the Setlist
- Planned quantity of the master recipe
- Packaging levels of the master recipe (L6, ..., L9)
- Material inputs by BOM position (material identifier, material short description, planned quantity, and fixed quantity)
- In case linked MFC inputs/outputs, according to the MFC definition, refer to the same material: The system also updates the material identifier and planned quantity of the related material outputs (same unit procedure, e.g. Dispense, planned quantity only for the first linked output) and the material identifier of the subsequent material inputs (subsequent unit procedure, e.g. Mixing).

In case there are remaining material-related inconsistencies that cannot be resolved automatically, the system displays the corresponding messages in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#)). For details, see **Validator Consistency Checks (SR3146.9.4.3+)**, Checks that Apply to Master Recipes Based on an ERP BOM ([GID-2666493](#)) and Checks that Apply to Material Parameters of a Phase ([GID-2666494](#)).

Details of the performed changes, are visible in the **Comparison (SR3146.9.2.19+)** window ([GID-2666577](#)), based on a defined comparison baseline.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5 GID-2666037 Material Flow Control (MFC) (SR3146.9.8)

A graphical tool allows to model the material flow of a master recipe or master workflow through a procedure within the Recipe and Workflow Designer workbench. The MFC-relevant material parameters (SR3146.9.5.1 ([GID-2667346](#)), SR3146.9.6.1 ([GID-2667373](#))) provide the basis for the material flow.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.1 *GID-2666473 Graphical View (SR3146.9.8.1)*

The graphical representation displays the following components:

- Unit procedures (of the procedure)
 - MFC-relevant material inputs
 - MFC-relevant material outputs
- Unit procedures hold all MFC-relevant material nodes defined for their respective phases. Before a merge, there are no connections available between unit procedures.
- Direct MFC inputs are derived from the material input parameters of the procedure's phases. A direct MFC input is displayed as triangle with an outgoing connector. The number it shows corresponds to the numeric suffix of the MFC item identifier visible in the table view of the MFC data.
- Does not apply to Workflow Designer. Direct MFC outputs are derived from the material output parameters of the procedure's phases. A direct MFC output is displayed as triangle with an incoming connector. The number it shows corresponds to the numeric suffix of the MFC item identifier visible in the table view of the MFC data.
- Does not apply to Workflow Designer. Switch nodes are created when direct MFC inputs and outputs are merged. A direct MFC input is replaced by an input switch and a direct MFC output is replaced by an output switch. A switch node is displayed as a small circle between unit procedures.
- A double-click of a direct MFC input, direct MFC output, input switch, output switch, confluence, or connector shows the related material parameter(s) within the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).
- The number an MFC input or output shows, corresponds to the numeric suffix of the MFC item identifier, which the system generates and assigns automatically. Before a merge, there are no connections available between inputs and outputs.
- Does not apply to Workflow Designer. A confluence node is displayed as circle and represents the point in the material flow when an input is processed and thus converted into an output or merged with other inputs to form an output. A confluence can receive one or more inputs, but can only issue one output. The confluence node of an MFC input that has been merged with the final output is displayed as a triangle with an incoming connector and no number.
- Does not apply to Workflow Designer. Connectors represent the material flows between the direct MFC input, direct MFC output, confluence nodes, and switch nodes. Connectors between switch nodes are dashed lines if they represent alternative transfers.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.5.2 *GID-2666474 Table View (SR3146.9.8.1.1)*

The table view of the MFC data provides following features:

- Representation of MFC-related attributes, plus position and planned quantity for ingoing, outgoing, and transfer items
- If the planned quantity mode is **None** or **As produced**, the mode is displayed instead of any planned quantity.
- Synchronization of highlighted MFC items within the table and the graph
- A double-click shows the related material parameter(s) within the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).

Does not apply to Workflow Designer.

The number of a transfer item consists of the numbers of the output and the input items from which it was merged.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.3 *GID-2666475 Tooltips (SR3146.9.8.2)*

Tooltips are available for

- direct MFC inputs,
- direct MFC outputs,
Does not apply to Workflow Designer.
- confluences, switches, and connectors (transfers).
Does not apply to Workflow Designer.

They present the following attributes:

- Material identifier
- [Material] Short description,
- Position (if available)
- Planned quantity (if available)
- If the planned quantity mode is **None** or **As produced**, the mode is displayed instead of any planned quantity.
- Path information (not for connectors)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.4 GID-2666476 Automatic Merge - Default MFC Definition (SR3146.9.8.3)

Does not apply to Workflow Designer.

The recipe author can trigger the automatic merge of direct MFC inputs, direct MFC outputs, input switches, and output switches at any time during the MFC definition process.

Already merged inputs and outputs are not affected.

Nodes are merged when the system can unambiguously determine their merge targets. When the system identifies two or more merge targets, it does not perform a merge.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.4.1 GID-2667390 DEFAULT MFC DEFINITION WITHIN A UNIT PROCEDURE (SR3146.9.8.4)

Does not apply to Workflow Designer.

The following rules apply to the automatic merge of MFC inputs and outputs within a unit procedure:

- The inputs and outputs of a Dispense unit procedure are merged 1:1, if they have the same material assigned.
- The inputs and outputs of a non-Dispense unit procedure are merged n:1, if only one output is defined. Different materials can be assigned to the inputs and the output.
- In any other case, the inputs and outputs are not merged.
Already merged inputs and outputs are not affected.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.4.2 GID-2667391 DEFAULT MFC DEFINITION BETWEEN UNIT PROCEDURES (SR3146.9.8.5)

Does not apply to Workflow Designer.

The following rules apply to the automatic merge of MFC inputs and outputs between unit procedures:

The outputs and inputs are merged 1:1, if there are unique output-input relationships available based on the material assignments and the SFC-related modeling of unit procedures.

In case of a selection branch (XOR), the merge results in alternative transfers.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

In any other case, the inputs and outputs are not merged.

Already merged inputs and outputs are not affected.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.5 Manual Merge

3.5.5.1 GID-2667392 MANUAL MERGE WITHIN A UNIT PROCEDURE (SR3146.9.8.6)

Does not apply to Workflow Designer.

The following rules apply to the manual merge of MFC inputs and outputs within a unit procedure:

- Outputs cannot be merged.
- For Dispense unit procedures:
Inputs cannot be merged.

Inputs and outputs can be merged 1:1, even if they have different materials assigned.

When one input (output) is selected, all outputs (inputs) that have the same material assigned are highlighted.

- For non-Dispense unit procedures:

Multiple inputs can be merged to one output n:1, even if they have different materials assigned.

When one input is selected, all inputs and outputs with which it can potentially be merged are highlighted.

When one output is selected, all inputs with which it can potentially be merged are highlighted.

The system can be enabled to support merging multiple inputs to one output not only for non-Dispense, but also for Dispense unit procedures by means of a configuration key (see Volume 4 of the "Technical Guide Configuration and Extension" [A7] [\(GID-2666084\)](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.5.2 GID-2667393 MANUAL MERGE BETWEEN UNIT PROCEDURES (SR3146.9.8.7)

Does not apply to Workflow Designer.

The following rules apply to the manual merge of direct MFC inputs, direct MFC outputs, input switches, and output switches between unit procedures:

- Inputs and outputs can only be merged

- if they have the same material assigned and
- if the input belongs to a succeeding unit procedure according to the SFC model or if unit procedures are modeled in parallel and
- In case of simultaneous branches (no XOR), inputs and outputs can only be merged 1:1.
 - In case of selection branches (XOR), one input can be merged into multiple alternative outputs and one output can be merged into multiple alternative inputs. In both cases alternative transfers are created.
 - When an input (output) is selected, all outputs (inputs) that have the same material assigned and are suitable according to the MFC structure are highlighted.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.5.3 GID-2667394 MANUAL MERGE OF MFC INPUTS WITH THE FINAL OUTPUT (SR3146.9.8.13)

Does not apply to Workflow Designer.

The following rules apply to the manual merge of MFC inputs with the final output:

- Merge of inputs with the final output is not allowed for Dispense unit procedures (see **Validator - MFC – Final output for Dispense unit procedures (SR3146.9.4.3.118)** message ([GID-2667488](#))).
- Any confluence of a direct MFC input can be merged with the final output of the master recipe.
- Multi-selection is supported.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.6 GID-2666478 Split (SR3146.9.8.8)

Does not apply to Workflow Designer.

Inputs and outputs that are presented in a merged status can be split.

Multi-selection of MFC inputs merged with the final output is supported.

- Split connector: dissolves the connection between two nodes.
- Split direct MFC input or output: removes input or output from its current confluence and recreates its initial (single) confluence node.
- Split confluence: dissolves the entire confluence and recreates all initial (single) confluence nodes of its inputs and its outputs.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Split output/input switch: dissolves all its outgoing/incoming connectors and replaces the switch with its initial output/input.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.7 *GID-2666479 Reset (SR3146.9.8.9)*

Does not apply to Workflow Designer.

The MFC definition can be reset to its initial, unmerged state by dissolving all merges.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.8 *GID-2666480 Automated Update of MFC Representation (SR3146.9.8.10)*

MFC-relevant changes of the master recipe and master workflow result in an automatic update of the graph and the tabular form (e.g. MFC-related material parameters, recipe structure, workflow structure).

MFC data and its representation that is not affected by the change of the master recipe or master workflow remains unchanged.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.5.9 *GID-2666481 MFC Definition Linked to Procedure Level (SR3146.9.8.12)*

The MFC definition of a master recipe or master workflow is linked to the procedure level, so that MFC definitions can also be modeled as part of a procedure-level custom building block and can be reused along with this custom building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.6 Information Flow (SR3146.9.9+)

The information flow supports references of parameters across phases, operations, unit procedures, and supports transitions. The references are maintained in the **Expression editor (SR3146.9.9.4)** UI element ([GID-2666579](#)).

3.6.1 GID-2666482 Output Mechanism (SR3146.9.9.1)

The output mechanism allows phases to have specific output variables defined.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.6.2 GID-2666483 Referencing (SR3146.9.9.2)

Upon the definition of parameter attributes and transitions, output variables can be referenced.

Only those output variables are available for referencing whose phases can be potentially completed before the execution of the current phase is started, according to the SFC model.

References are supported within an operation and across operations and unit procedures.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.6.2.1 GID-2667395 No DISTRIBUTED EXECUTION (SR3146.9.9.2.1)

Output variables that belong to operations marked for Distributed Execution cannot be referenced.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.6.3 GID-2666484 Validator (SR3146.9.9.3)

The automatic validation of references of output variables covers:

- Broken links
- Wrong syntax of expressions/calculations
- Semantic reference errors: referenced phase is not completed when referencing phase becomes active or referenced phase belongs to Dispense operation.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.7 GID-2666039 Standard Statuses for Version Control (SR3146.6.4)

The **version control (SR3146.4.5)** function ([GID-2666078](#)) supports the following statuses:

- **Initial:** Item is new and has not been saved yet.
- **Edit:** Item is saved and can be modified.
- **Verification:** Item is ready for review. If updates are required, a status change back to **Edit** has to be performed.
- **Scheduled:** Item is valid but its period of validity is in the future related to the current global time.
This status allows fast filtering for specific items and the creation of a consistent documentation.
- **Valid:** Item is valid. All of its attributes that are under version control cannot be changed.
- **Archived:** Item is no longer valid. It can no longer be used.
- **Obsolete:** Item was never valid and should not be used anymore.

The following important rules apply:

- At a specific time, only one version of an item can be **Valid**.
- To extend the period of validity, a status change from **Valid** to **Valid** must be performed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

3.7.1 GID-2666485 Default Version Graph for Master Recipes (SR3146.6.4.1)

The version control (SR3146.4.5) function ([GID-2666078](#)) supports the following default transitions for master recipes:

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
1.1 - Initial » Edit	---	Automatic transition.
1.2 - Verification » Edit	Vers_Trans_Verification-Edit	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
2.1 - Edit » Verification	Vers_Trans_Edit-Verification	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
3.1 - Verification » Valid	Vers_Trans_Verification-Valid	Default user group: Qualified Person
3.2 - Valid » Valid	Vers_Trans_Valid-Valid	E.g. if period of validity has to be changed. Default user group: Qualified Person
3.3 - Scheduled » Valid	Vers_Trans_Scheduled-Valid	Automatic transition when the current date reaches the start date of the period of validity. Default user group: Qualified Person
4.1 - Valid » Archived	Vers_Trans_Valid-Archived	Automatic transition when the end date of the period of validity is in the past. Automatic transition when the status of another version of a master recipe is set to Valid (except if there is a version in the Scheduled status). Manual transition when a status transition to Archived is executed by the recipe author. Default user group: Qualified Person

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
5.1 - Verification » Scheduled	Vers_Trans_Verification-Scheduled	If the scheduled period overlaps with a period of validity, the end date of the period of validity is moved to a date directly before the start date of the scheduled period. Default user group: Qualified Person
5.2 - Scheduled » Scheduled	Vers_Trans_Scheduled-Scheduled	E.g. if period of validity has to be changed. Default user group: Qualified Person
6.1 - Edit » Obsolete	Vers_Trans_Edit-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
6.2 - Verification » Obsolete	Vers_Trans_Verification-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
6.3 - Scheduled » Obsolete	Vers_Trans_Scheduled-Obsolete	Default user group: Qualified Person

The diagram illustrates the **MESMasterRecipeVersionGraph** flexible state model.

3.7.2 GID-2666486 Default Version Graph for Master Workflows (SR3146.6.4.4)

The **version control (SR3146.4.5)** function ([GID-2666078](#)) supports the following default transitions for master workflows:

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
1.1 - Initial » Edit	---	Automatic transition.
1.2 - Verification » Edit	Vers_Trans_WF_Verification-Edit	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
2.1 - Edit » Verification	Vers_Trans_WF_Edit-Verification	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
3.1 - Verification » Valid	Vers_Trans_WF_Verification-Valid	Default user groups: Workflow Author, Qualified Person
3.2 - Valid » Valid	Vers_Trans_WF_Valid-Valid	E.g. if period of validity has to be changed. Default user groups: Workflow Author, Qualified Person
3.3 - Scheduled » Valid	Vers_Trans_WF_Scheduled-Valid	Automatic transition when the current date reaches the start date of the period of validity. Default user groups: Workflow Author, Qualified Person
4.1 - Valid » Archived	Vers_Trans_WF_Valid-Archived	Automatic transition when the end date of the period of validity is in the past. Automatic transition when the status of another version of a master workflow is set to Valid (except if there is a version in the Scheduled status). Manual transition when a status transition to Archived is executed by the workflow author. Default user groups: Workflow Author, Qualified Person

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
5.1 - Verification » Scheduled	Vers_Trans_WF_Verification-Scheduled	If the scheduled period overlaps with a period of validity, the end date of the period of validity is moved to a date directly before the start date of the scheduled period. Default user groups: Workflow Author, Qualified Person
5.2 - Scheduled » Scheduled	Vers_Trans_WF_Scheduled-Scheduled	E.g. if period of validity has to be changed. Default user groups: Workflow Author, Qualified Person
6.1 - Edit » Obsolete	Vers_Trans_WF_Edit-Obsolete	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
6.2 - Verification » Obsolete	Vers_Trans_WF_Verification-Obsolete	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
6.3 - Scheduled » Obsolete	Vers_Trans_WF_Scheduled-Obsolete	Default user groups: Workflow Author, Qualified Person

3.8 Validator Consistency Checks (SR3146.9.4.3+)

The following messages are available to inform the recipe or workflow author about issues found by the validator consistency check. They are displayed in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#))

3.8.1 Checks that Apply to SFC Modeling

3.8.1.1 GID-2667396 VALIDATOR - DUMMY ELEMENTS (SR3146.9.4.3.1)

Message category: Error

Issue: Dummy elements are used within a master recipe, master workflow, or (custom) building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.2 GID-2667397 VALIDATOR - LOOP (SR3146.9.4.3.3)

Message category: Error

Issue: Loops are built between unit procedures of a master recipe or (custom) building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.3 GID-2667398 VALIDATOR - OUTGOING LINK (SR3146.9.4.3.12)

Message category: Error

Issue: There is no outgoing link defined for a procedural element.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.4 GID-2667399 VALIDATOR - START AND END STEP (SR3146.9.4.3.13)

Message category: Error

Issue: Start and end step are not on the same branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.1.5 GID-2667400 VALIDATOR - SIMULTANEOUS BRANCH (SR3146.9.4.3.14)

Message category: Error

Issue: The end of a simultaneous branch is not merged as a simultaneous branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.6 GID-2667401 VALIDATOR - SELECTION BRANCH (SR3146.9.4.3.15)

Message category: Error

Issue: The end of a selection branch is not merged as a selection branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.7 GID-2667402 VALIDATOR - SIMULTANEOUS BRANCH - UNSUITABLE COMPONENTS (SR3146.9.4.3.17)

Message category: Error

Issue: The end of a simultaneous branch connects unsuitable components (e.g. simultaneous branch includes open ends).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.8 GID-2667403 VALIDATOR - ERRORS IN PRECEDING COMPONENTS (SR3146.9.4.3.18)

Message category: Warning

Issue: Elements could not be validated due to errors in the preceding components.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)
-
-
-

3.8.1.9 GID-2667404 VALIDATOR - START STEP PATH (SR3146.9.4.3.19)

Message category: Error

Issue: Elements cannot be reached from the start step.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.10 GID-2667405 VALIDATOR - END STEP PATH (SR3146.9.4.3.20)

Message category: Error

Issue: The components form an endless loop.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.1.11 GID-2667406 VALIDATOR - SIMULTANEOUS BRANCH - END TWICE (SR3146.9.4.3.148)

Message category: Error

Issue: A simultaneous branch cannot end twice.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2 Checks that Apply to Group Modeling

3.8.2.1 GID-2667407 VALIDATOR - NESTED GROUP (SR3146.9.4.3.144)

Message category: Error

Issue: The **Usage as group** attribute of the currently open recipe element is set to **Allowed** or **Mandatory**. Holding a group in its graph is not allowed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.2 VALIDATOR - GRAPH NOT ALLOWED FOR GROUP (SR3146.9.4.3.145+)

The **graph** is not valid to be used as group. There are several constellations that are not allowed.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.2.2.1 GID-2667409 VALIDATOR - NOT ALLOWED BRANCH BEFORE END STEP (SR3146.9.4.3.145.1)

Message category: Error

Issue: An end step of a group must be preceded by a transition, not a branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.2.2 GID-2667410 VALIDATOR - NOT ALLOWED BRANCH AFTER START STEP (SR3146.9.4.3.145.2)

Message category: Error

Issue: A start step of a group must be succeeded by a transition, not a branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.2.3 GID-2667411 VALIDATOR - NOT ALLOWED BRANCH AFTER START TRANSITION (SR3146.9.4.3.145.3)

Message category: Error

Issue: The transition after the start step of a group must be succeeded by an element, not a branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.2.4 GID-2667412 VALIDATOR - NOT ALLOWED BRANCH BEFORE END TRANSITION (SR3146.9.4.3.145.4)

Message category: Error

Issue: The transition before the end step of a group must be preceded by an element, not a branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.2.5 GID-2667413 VALIDATOR - START TRANSITION WITH NOT ALLOWED CONDITION (SR3146.9.4.3.145.5)

Message category: Error

Issue: The transition after the start step holds a condition, which is not allowed for a group.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

3.8.2.2.6 GID-2667414 VALIDATOR - END TRANSITION WITH NOT ALLOWED CONDITION (SR3146.9.4.3.145.6)

Message category: Error

Issue: The transition before the end step holds a condition, which is not allowed for a group.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.3 GID-2667415 VALIDATOR - NOT ALLOWED PARAMETER FOR GROUP USAGE (SR3146.9.4.3.146)

Message category: Error

Issue: The **Usage as group** attribute of the recipe element is set to **Mandatory** and the header component has one or more parameters defined that cannot be retained when it is used as group.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.2.4 GID-2667416 VALIDATOR - NOT SUPPORTED PARAMETER FOR GROUP USAGE (SR3146.9.4.3.147)

Message category: Information

Issue: The **Usage as group** attribute of the recipe element is set to **Allowed** and the header component has one or more parameters defined that cannot be retained when it is used as group.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.3 Checks that Apply to Transition Conditions

3.8.3.1 GID-2667417 VALIDATOR - TRANSITION CONDITION IS MISSING (SR3146.9.4.3.27)

Message category: Error

Issue: There is no condition expression defined for a transition of a selection branch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.3.2 GID-2667418 VALIDATOR - TRANSITION CONDITION - SYNTAX (SR3146.9.4.3.31)

Message category: Error

Issue: There is a syntax error in the expression of a transition condition.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.3.3 GID-2667419 VALIDATOR - TRANSITION CONDITION - BROKEN LINK (SR3146.9.4.3.37)

Message category: Depends on the context (see child requirements)

Issue: The expression of a transition condition includes a broken link that needs to be resolved.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.3.4 GID-2667420 VALIDATOR - TRANSITION CONDITION - BROKEN LINK - WARNING (SR3146.9.4.3.37.1)

Context: Custom building block

Message category: Warning (by configuration, the message category can be changed to Error if the transition is flagged for **locking**)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.3.5 GID-2667421 VALIDATOR - TRANSITION CONDITION - BROKEN LINK - ERROR (SR3146.9.4.3.37.2)

Context: Master recipe or master workflow

Message category: Error

The broken link can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Removes the **XT** marker from the unresolved external reference.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)
-
-
-

3.8.3.6 GID-2667422 VALIDATOR - TRANSITION CONDITION - INVALID REFERENCE (SR3146.9.4.3.38)

Message category: Error

Issue: The phase referenced by a transition condition is invalid.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.4 Checks that Apply to Expressions within Parameter Attributes

3.8.4.1 GID-2667423 VALIDATOR - PHASE PARAMETER - SYNTAX (SR3146.9.4.3.21)

Message category: Error

Issue: There is a syntax error in the expression of a parameter attribute.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.4.2 GID-2667424 VALIDATOR - PHASE PARAMETER - BROKEN LINK (SR3146.9.4.3.25)

Message category: Depends on the context (see child requirements)

Issue: The expression of a parameter attribute includes a broken link that needs to be resolved.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.4.3 GID-2667425 VALIDATOR - PHASE PARAMETER - BROKEN LINK - WARNING (SR3146.9.4.3.25.1)

Context: Custom building block

Message category: Warning (by configuration, the message category can be changed to Error if the parameter is flagged for **locking**)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.4.4 GID-2667426 VALIDATOR - PHASE PARAMETER - BROKEN LINK - ERROR (SR3146.9.4.3.25.2)

Context: Master recipe or master workflow

Message category: Error

The broken link can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Removes the **XT** marker from the unresolved external reference.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.4.5 GID-2667427 VALIDATOR - PHASE PARAMETER - INVALID REFERENCE (SR3146.9.4.3.36)

Message category: Error

Issue: The phase referenced by a parameter attribute is invalid.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5 Checks that Apply to MFC Modeling of a Procedure within Recipe and Workflow Designer

3.8.5.1 GID-2667428 VALIDATOR - MFC - FINAL OUTPUT DOES NOT MATCH MATERIAL (PRODUCT) (SR3146.9.4.3.61)

Does not apply to Workflow Designer.

Message category: Error

Issue: The final output material of an MFC definition does not match the material (product) defined within the master recipe header.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

-

3.8.5.2 GID-2667429 VALIDATOR - MFC - MULTIPLE OUTPUTS FOR NON-DISPENSE UNIT PROCEDURES (SR3146.9.4.3.62)

Does not apply to Workflow Designer.

Message category: Depends on the context (see child requirements)

Issue: For non-standalone Dispense unit procedures, there are multiple direct MFC outputs defined or the one defined output is not the final output of the recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.3 GID-2667430 VALIDATOR - MFC - MULTIPLE OUTPUTS FOR NON-DISPENSE UNIT PROCEDURES - WARNING (SR3146.9.4.3.62.1)

Context: Custom building block

Message category: Warning

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.4 GID-2667431 VALIDATOR - MFC - MULTIPLE OUTPUTS FOR NON-DISPENSE UNIT PROCEDURES - ERROR (SR3146.9.4.3.62.2)

Context: Master recipe

Message category: Error

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.5 GID-2667432 VALIDATOR - MFC - NO OUTPUT DEFINED FOR INPUT (SR3146.9.4.3.63)

Does not apply to Workflow Designer.

Message category: Depends on the context (see child requirements)

Issue: There is no target output defined for a direct MFC input or an input switch.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

**3.8.5.14 GID-2667441 VALIDATOR - MFC - NO DIRECT OUTPUT DEFINED - ERROR
(SR3146.9.4.3.117.2)**

Context: Master recipe

Message category: Error

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.15 GID-2667442 VALIDATOR - MFC - ATTRIBUTES OF MATERIAL PARAMETERS DO NOT MATCH (SR3146.9.4.3.136)

Does not apply to Workflow Designer.

Message category: Error

Issue: The attributes of material parameters with the same MFC position are different.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.16 GID-2667443 VALIDATOR - MFC - OUTGOING OR INCOMING CONNECTOR IS MISSING (SR3146.9.4.3.138)

Does not apply to Workflow Designer.

Message category: Error

Issue: For at least one execution path, there is no outgoing connector defined for a switch output or no incoming connector defined for a switch input.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.5.17 GID-2667444 VALIDATOR - MFC - MORE THAN ONE OUTGOING OR INCOMING CONNECTOR ON ONE EXECUTION PATH (SR3146.9.4.3.139)

Does not apply to Workflow Designer.

Message category: Error

Issue: For at least one execution path, a switch output has more than one outgoing connector or a switch input has more than one incoming connector.

- Management of Master Recipes and Master Workflows (SR3146.4+)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.6 Checks that Apply to Master Recipes in General

3.8.6.1 GID-2667445 VALIDATOR - RECIPE - REFERENCE QUANTITY NOT DEFINED (SR3146.9.4.3.67)

Does not apply to Workflow Designer.

Message category: Error

Issue: The planned quantity of a master recipe or the UoM of the planned quantity is missing.

Per default configuration, the check is disabled for master recipes of the **Cost center** usage type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.6.2 GID-2667446 VALIDATOR - RECIPE - MIN/MAX QUANTITIES WITHOUT UOM (SR3146.9.4.3.111)

Does not apply to Workflow Designer.

Message category: Error

Issue: The minimum or maximum quantity-related unit of measure of a master recipe is missing or the unit of measure cannot be converted with the available conversion factors.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.6.3 GID-2667447 VALIDATOR - MASTER RECIPE AND MATERIAL PARAMETER - CONFLICTING INVENTORY LEVEL (SR3146.9.4.3.52)

Message category: Error

Issue: There are conflicts in the inventory level definition of the packaging levels of the master recipe and its material output parameters. Applies only to material output parameters that refer to the material (product) of the master recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.6.4 GID-2667448 VALIDATOR - PACKAGING LEVEL OF MASTER RECIPE (SR3146.9.4.3.107)

Message category: Error

Issue: For the packaging level defined in the master recipe header there is a contained number defined but no meaning.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7 Checks that Apply to Master Recipes Based on an ERP BOM

3.8.7.1 GID-2667449 VALIDATOR - RECIPE - PLANNED QUANTITY DOES NOT FIT ERP BOM (SR3146.9.4.3.57)

Does not apply to Workflow Designer.

Message category: Error

Issue: The planned quantity of the master recipe does not match the base quantity of the related ERP BOM.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.2 GID-2667450 VALIDATOR - RECIPE - PLANNED QUANTITY DOES NOT FIT ERP BOM - RESOLVE (SR3146.9.4.3.57.1)

The inconsistency can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Planned quantity of the master recipe

The automatic resolution of the ERP BOM discrepancy is also included in the **Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)** operation ([GID-2666472](#))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

3.8.7.3 GID-2667451 VALIDATOR - RECIPE - PACKAGING LEVEL DOES NOT FIT ERP BOM (SR3146.9.4.3.58)

Does not apply to Workflow Designer.

Message category: Error

Issue: The packaging level (content) of the master recipe does not match the packaging level (content) of the related ERP BOM.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.4 GID-2667452 VALIDATOR - RECIPE - PACKAGING LEVEL DOES NOT FIT ERP BOM - RESOLVE (SR3146.9.4.3.58.1)

The inconsistencies can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Packaging level of the master recipe
- Packaging level content of the master recipe

The automatic resolution of the ERP BOM discrepancies is also included in the **Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)** operation ([GID-2666472](#))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.5 GID-2667453 VALIDATOR - PHASE PARAMETER - MISSING ERP BOM POSITION (SR3146.9.4.3.50)

Does not apply to Workflow Designer.

Message category: Error

Issue: In a master recipe that is based on an ERP BOM, there are positions that represent a direct MFC input missing in the material parameters.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.7.6 GID-2667454 VALIDATOR - PHASE PARAMETER - MULTIPLE ERP BOM POSITIONS (SR3146.9.4.3.51)

Does not apply to Workflow Designer.

Message category: Error

Issue: There are positions defined multiple times in the material parameters of a master recipe or procedure building block that is based on an ERP BOM. The positions are not unique throughout an entire execution path.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.7 GID-2667455 VALIDATOR - PHASE PARAMETER - NON-ERP BOM POSITION (SR3146.9.4.3.55)

Does not apply to Workflow Designer.

Message category: Error

Issue: In a master recipe that is based on an ERP BOM, there are material parameter positions that represent direct MFC inputs, which are not part of the ERP BOM.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.8 GID-2667456 VALIDATOR - PHASE PARAMETER - ERP BOM ATTRIBUTE DISCREPANCY (SR3146.9.4.3.56)

Does not apply to Workflow Designer.

Message category: Error

Issue: At least one of the common attributes of a position of a material parameter and the master recipe-related ERP BOM item do not match.

Common attributes are material identifier and short description, quantity with UoM, Fixed quantity.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.9 GID-2667457 VALIDATOR - PHASE PARAMETER - ERP BOM ATTRIBUTE DISCREPANCY - RESOLVE (SR3146.9.4.3.56.1)

The inconsistencies can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Material inputs by BOM position (material identifier, material short description, planned quantity, and fixed quantity)
- In case linked MFC inputs/outputs, according to the MFC definition, refer to the same material:
The system also updates the material identifier and planned quantity of the related material outputs (same unit procedure, e.g. Dispense, planned quantity only for the first linked output) and the material identifier of the subsequent material inputs (subsequent unit procedure, e.g. Mixing).

The automatic resolution of the ERP BOM discrepancies is also included in the **Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)** operation ([GID-2666472](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.7.10 GID-2667458 VALIDATOR - MFC (FINAL OUTPUT) - PLANNED QUANTITY DOES NOT FIT MASTER RECIPE (SR3146.9.4.3.133)

Does not apply to Workflow Designer.

Message category: Information

Issue: The planned quantity of the final output does not match the planned quantity to be produced by the master recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.8 Checks that Apply to Material Parameters of a Phase

3.8.8.1 GID-2667459 VALIDATOR - MINIMUM REQUIRED MATERIAL PARAMETERS (SR3146.9.4.3.10)

Message category: Depends on the context (see child requirements)

Issue: The number of minimum required material input or output parameters of a phase is not met.

3.8.8.24 GID-2667482 VALIDATOR - MATERIAL PARAMETER - PACKAGING LEVEL DOES NOT FIT MATERIAL'S MASTER DATA (SR3146.9.4.3.109)

Message category: Error

Issue: The packaging level (content) of the material parameter does not match the packaging level (content) of the material's master data.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.8.25 GID-2667483 VALIDATOR - MATERIAL PARAMETER - PACKAGING LEVEL DOES NOT FIT MATERIAL'S MASTER DATA - RESOLVE (SR3146.9.4.3.109.1)

The inconsistencies can be resolved with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system automatically updates the following data:

- Packaging level of the material parameter
- Packaging level content of the material parameter

The automatic resolution of the ERP BOM discrepancies is also included in the **Workbench Object Operations - Replace Material (Product) (SR3146.9.10.11)** operation ([GID-2666472](#)).

3.8.9.15 GID-2667498 VALIDATOR - D_MATERIAL - WEIGHING SEQUENCE NOT DEFINED (SR3146.9.4.3.141)

Does not apply to Workflow Designer.

Message category: Error

Issue: A weighing sequence is defined for at least one material input parameter of the **Identify material** phase of a Dispense operation, but not for all MFC-relevant material input parameters of the phase.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.9.16 GID-2667499 VALIDATOR - D_MATERIAL - WEIGHING SEQUENCE AND WRONG USAGE TYPE (SR3146.9.4.3.142)

Does not apply to Workflow Designer.

Message category: Error

Issue: A weighing sequence is defined for a material input parameter of the **Identify material** phase of a Dispense operation, but this is only supported for the **Production** usage type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.10 Checks that Apply to Inline Weighing

3.8.10.1 GID-2667500 VALIDATOR - MFC - UNALLOWED WEIGHING METHOD (SR3146.9.4.3.120)

Message category: Error

Issue: For the **Identify material** phase of an Inline Weighing operation, **Pallet** weighing is not allowed for MFC-relevant material parameters.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Management of Master Recipes and Master Workflows (SR3146.4+)

3.8.10.2 GID-2667501 VALIDATOR - MFC - PLANNED QUANTITY MODE IS AS DEFINED - TOLERANCES ARE MISSING (SR3146.9.4.3.121)

Message category: Error

Issue: For the **Identify material** phase of an Inline Weighing operation, there are no tolerances defined for an MFC-relevant material parameter with **As defined** as planned quantity mode.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.10.3 GID-2667502 VALIDATOR - MFC - PLANNED QUANTITY MODE IS AS DEFINED - PLANNED QUANTITY IS MISSING (SR3146.9.4.3.122)

Message category: Error

Issue: For the **Identify material** phase of an Inline Weighing operation, there is no planned quantity defined for an MFC-relevant material parameter with **As defined** as planned quantity mode.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.10.4 GID-2667503 VALIDATOR - MFC - WEIGHING MATERIAL TYPE NOT DEFINED (SR3146.9.4.3.123)

Message category: Error

Issue: For the **Identify material** phase of an Inline Weighing operation, there is no weighing material type defined for an MFC-relevant material parameter.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.10.5 GID-2667504 VALIDATOR - MFC - MFC POSITION IS MISSING (SR3146.9.4.3.124)

Message category: Error

Issue: For the **Identify material** phase of an Inline Weighing operation, there is no MFC position assigned to an MFC-related input material parameter. This applies to ingoing MFC transfer item material parameters only.

3.8.15.13 GID-2667534 VALIDATOR - EQUIPMENT REQUIREMENT RULE - INVALID REFERENCE (SR3146.9.4.3.91)

Message category: Error

Issue: The phase referenced by an equipment requirement rule is invalid.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.15.14 GID-2667535 VALIDATOR - EQUIPMENT REQUIREMENT RULE - RULE EXPRESSION IS MISSING (SR3146.9.4.3.92)

Message category: Error

Issue: There is no rule expression defined for an equipment requirement rule.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.16 Checks that Apply to Work Center Assignments

3.8.16.1 GID-2667536 STATION ASSIGNMENT DOES NOT MATCH A GIVEN WORK CENTER ASSIGNMENT (SR3146.9.4.3.40)

Message category: Error

Issue: Per unit procedure, at least one station assigned on operation level does not match the work centers assigned on unit procedure level. Therefore, work centers have to be added or stations have to be removed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.16.2 GID-2667537 STATION ASSIGNMENT IS MISSING FOR A GIVEN WORK CENTER ASSIGNMENT (SR3146.9.4.3.42)

Message category: Error

Issue: At least one station is already assigned to an operation. However, there are more work centers assigned on unit procedure level and the dispatching of this operation does not yet reflect the stations of all of the work centers.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

3.8.16.3 GID-2667538 UNUSABLE STATION (SR3146.9.4.3.43)

Message category: Error

Issue: At least one station of this operation cannot be used because it does not belong to any work center.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.16.4 GID-2667539 UNUSABLE WORK CENTER (SR3146.9.4.3.44)

Message category: Error

Issue: At least one work center of this unit procedure cannot be used because it has no station defined.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.17 Checks that Apply to Capability Assignments in General

3.8.17.1 GID-2667540 USAGE OF CAPABILITY NOT ALLOWED FOR WORKFLOWS (SR3146.9.4.3.79)

Message category: Error

Issue: The operation/unit procedure contains the Abort-and-reactivate-enabled capability. But the capability is not permitted for use in workflows.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

3.8.17.2 GID-2667541 USAGE OF CAPABILITY NOT ALLOWED FOR DISPENSE (SR3146.9.4.3.45)

Message category: Error

Issue: The operation/unit procedure contains at least one of the following capabilities: Abort-and-reactivate-enabled, Auto-startable, Detachable, Escalation-enabled, Event-triggered, Server-run, or Trigger-enabled. These capabilities, however, are not permitted for use in Dispense operations or unit procedures.

Attribute	Value
MES-Business: GxP relevance	Yes

4 Management of Building Blocks (SR3146.10+)

The management of building blocks differs from the management of master recipes and master workflows in the following areas:

4.1 GID-2666042 Header Attributes (SR3146.10.4)

The custom building block object supports the following header attributes:

- Basic data:

Identifier

Revision

Short description

Comparison baseline

Usage as <operation or phase> group

Only for operations and unit procedures.

Access privilege

Category 1 - 2

To display Category 3, the system needs to be configured. For details, see "Configuring the Parameter Panel of Recipe and Workflow Designer" in Volume 3 of the "Technical Guide Configuration and Extension" [A5] ([GID-2666084](#)).

Description

Dispense

Only for operations. Read-only for unit procedures.

Operator exception texts

Only for phases, operations, and unit procedures.

Reviewer exception texts

Only for phases, operations, and unit procedures.

Hide in batch/workflow report

Only for phases.

- Status data (for the full history, see the **Status History (SR3146.10.5)** function ([GID-2666045](#))):

Status

The attributes are maintained in the **header component-specific (SR3146.9.2.15)** property window ([GID-2667602](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.2 GID-2666043 Workbench Object Operations (SR3146.9.10.7)

The following operations are supported for custom building blocks. They apply to elements on all levels (procedure, unit procedure, operation, phase).

- Create new building block ([GID-2667386](#))
- Open existing (see **Open (SR3146.9.2.20+)** dialog ([GID-2666571](#)))
- View locked building block ([GID-2667387](#))
- Save (current or all)
- Save as new custom BB

For custom building blocks that are protected by an access privilege: The access privilege of the original custom building block is passed on to the new custom building block. In the default configuration, the access privilege cannot be changed.
- Rename
- Copy selected element(s), see **Copy & Paste Function (SR3146.9.1.6+)** feature ([GID-2666568](#))
- Paste previously copied element(s), see **Copy & Paste Function (SR3146.9.1.6+)** feature ([GID-2666568](#))
- Create <same BB level> from selected element

For custom building blocks that are protected by an access privilege: The access privilege of the original custom building block is passed on to the new custom building block. In the default configuration, the access privilege cannot be changed.
- Create <next higher BB level> from selected element(s)

For custom building blocks that are protected by an access privilege: The access privilege of the original custom building block is passed on to the new custom building block. In the default configuration, the access privilege cannot be changed.
- Replace (overrides parameters) via the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#))
- Smart replace via the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#))

(see **Workbench Object Operations - Smart Replace (SR3146.9.10.10)** operation ([GID-2666471](#)))

- Delete
- **Status Handling of Custom Building Blocks (SR3146.10.1)** operation ([GID-2666044](#))
- Add <custom building block> to Setlist (via context menu for tab titles of the Graph Window of the **Work Area (SR3146.9.2.1)** UI element ([GID-2666570](#)))
- Graph pagination
- **Usage List (SR3146.10.3)** operation ([GID-2666047](#))
- **Statistics (SR3146.9.2.18)** operation ([GID-2666581](#))
- Close (current or all)

The following operations are supported for system building blocks. They apply to elements on the phase level.

- Open existing (see **Open (SR3146.9.2.20+)** dialog ([GID-2666571](#)))
- Save as new custom BB
- Close (current or all)
- **Compile Usage List of a System Phase (SR3146.10.6)** operation ([GID-2666048](#))
- **Statistics (SR3146.9.2.18)** operation ([GID-2666581](#))

- A building block (procedure, unit procedure, operation, phase) consists of a header and its underlying graphs, except for phases since they represent the lowest level. Available revisions of custom building blocks starting with the same identifier are listed for information.
- While renaming a custom BB: Available revisions of custom building blocks starting with the same identifier are listed for information.
- If a custom BB is copied (save as), the new building block is available for selection from the **Universe (SR3146.9.2.4+)** UI element ([GID-2666572](#)) and the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#)) and is opened in the current tab. Available revisions of custom building blocks starting with the same identifier are listed for information.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.2.1 **GID-2666508 Workbench Object Operations - New Custom Building Block Dialog (SR3146.9.10.7.2)**

When a new custom building block is created, first, the building block author defines the building block identifier and revision.

The system shall allow to select an access privilege for the protection of the building block from unauthorized access for users with access privileges that allow to maintain protected building blocks. The list of available access privileges shall be restricted to the access privileges of the logged-in user.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

If the new building block is an operation or unit procedure, the recipe author can decide with the **Usage as group** attribute if the building block can be used as a group:

- **Not allowed** (cannot be used as a group of building blocks)
- **Mandatory** (must be used as a group of building blocks)
- **Allowed** (can be used as a group of building blocks)

The **Usage as group** attribute can be changed as long as the building block is not in a read-only status.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.2.2 **GID-2666509 Workbench Object Operations - View Locked Custom Building Block (SR3146.9.10.7.1)**

If a custom building block is locked by another user, the system allows to view the building block without the possibility to change it.

The custom building block can be copied (save as). Operations that do not change a building block are also available (e.g. graph pagination, usage list, statistics).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.3 **GID-2666044 Status Handling of Custom Building Blocks (SR3146.10.1)**

Recipe and Workflow Designer provides a status change function for custom building blocks (**Draft**, **Verification**, **Approved**, **Archived**). This includes a check that the custom building blocks have no error or warning messages left in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#)).

The system automatically locks all transitions without an identifier when a building block's status is changed to a read-only status.

Building blocks in the **Archived** status are available in the **Universe (SR3146.9.2.4+)** UI element ([GID-2666572](#)) (of Recipe and Workflow Designer) and the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#)), but they cannot be added to a recipe, workflow, or custom building block.

- **Draft:** Initial status of building blocks.
- **Verification:** Building block is ready for review. If updates are required, a status change back to **Draft** has to be performed.

- **Approved:** Building blocks can no longer be modified. If an **Approved** building block is used within a master recipe, master workflow, or a custom building block, parameters or transitions that were locked are frozen and cannot be unlocked. Parameters or transitions that are not locked can still be modified. Underlying graphs are read-only. See "Locking of Parameters (SR3146.9.13+)" ([GID-2792501](#)) and "Locking of Transitions (SR3146.9.14+)" link .
- **Archived:** They are still available in the **Universe (SR3146.9.2.4+)** UI element ([GID-2666572](#)) (of Recipe and Workflow Designer) and the **Setlist (SR3146.9.2.9)** UI element ([GID-2666573](#)), but can only be added to a **change request SR3146.12+** object ([GID-2666053](#)) (as old building block) from the Setlist. They are accessible via the **Open (SR3146.9.2.20+)** function ([GID-2666571](#)).

Each status change must be confirmed by a single electronic signature.

The fixed state model supports the following status changes:

Figure 5: Building block - status graph

Transition (ID - From » To)	Signature (Access privilege)	Additional information
1.1 - Initial » Draft	---	Automatic transition.
1.2 - Verification » Draft	red_Status_Trans_Verification-Draft	---
2.1 - Draft » Verification	red_Status_Trans_Draft-Verification	---
3.1 - Draft » Approved	red_Status_Trans_Draft-Approved	---
3.2 - Verification » Approved	red_Status_Trans_Verification-Approved	---
4.1 - Approved » Archived	red_Status_Trans_Approved-Archived	---

4.4 GID-2666045 Status History (SR3146.10.5)

Recipe and Workflow Designer provides a status history function for custom building blocks in order to track status transitions.

The history includes transitions that have taken place in a different environment (e.g. prior to export or import of a custom building block).

The history of status transitions executed before the introduction of the history with PharmaSuite 10.0 is generated automatically from the status data that is documented with the **Header Attributes (SR3146.10.4)** data ([GID-2666042](#)). It is generated when the history is opened for the first time.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.5 GID-2666046 Revisioning (SR3146.10.2)

Revisioning of custom building blocks is supported as a mandatory free-text property.

Unique revisioning is requested when a building block is created (see "Workbench Object Operations (SR3146.9.10.7)" ([GID-2666043](#)), "Workbench Object Operations - Element (SR3146.9.10.6)" ([GID-2666469](#))).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.6 GID-2666047 Usage List (SR3146.10.3)

The usage list of a custom building block provides all objects that have been designed based on the custom building block in question.

The following object types are supported by the usage list: custom building blocks, master recipes, and master workflows.

For objects that are protected by an access privilege: The system shall only provide objects whose access privilege matches the access privilege of the logged-in user.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.6.1 GID-2666510 Content (SR3146.10.3.1)

The usage list allows to track:

- Direct usage of a custom building block

All objects that contain elements that were derived directly from the custom building block in question, without using an intermediate-level-approved custom building block.

Example: A custom phase was built directly into a master recipe.

- Indirect usage of a custom building block

All objects that contain elements that were not derived directly from the custom building block in question, but that were derived from an intermediate-level-approved custom building block.

Example: A custom phase is used to build and approve a custom operation, which then was built directly into a master recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.6.2 GID-2666511 Objects Information (SR3146.10.3.2)

Each object that is listed in the usage list provides the following information:

- Object type
- Identifier, version/revision, and status of the object
- Usage (direct, indirect)
- Used building block level
- As group
- [Used building block] Identifier, revision, and status

Direct usage: Identifier of the custom building block for which the usage list has been compiled.

Indirect usage: Identifier of the intermediate-level-approved custom building.

- Path information of the recipe, workflow, custom building block elements
If the path belongs to a group, the last element identifier is that of the first element of the group.

Additionally, the usage list provides a list of changed objects whose objects information cannot be refreshed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.6.3 GID-2666512 Filter (SR3146.10.3.3)

The usage list supports the following filter options:

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Usages [Any (default), All, Direct, Indirect]
- Status category [Any, All, Edit, Verification, Valid (default), Retired]

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.7 GID-2666048 Usage List of a System Phase (SR3146.10.6)

The usage list of a system phase provides all objects that have been designed to use the system phase in question.

The following object types are supported by the usage list: custom building blocks, master recipes, and master workflows.

For objects that are protected by an access privilege: The system shall only provide objects whose access privilege matches the access privilege of the logged-in user.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.7.1 GID-2666513 Content (SR3146.10.6.1)

The usage list allows to track:

- Direct usage of a system phase
All objects that contain the system phase in question, without using an intermediate-level-approved custom building block.
Example: A system phase was built directly into an operation of a master recipe.
- Indirect usage of a system phase
All objects that contain the system phase in question, but within an element that was derived from an intermediate-level-approved custom building block.
Example: A system phase is used to build and approve a custom operation, which then was built directly into a master recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.7.2 GID-2666514 Objects Information (SR3146.10.6.2)

Each object that is listed in the usage list provides the following information:

- Object type

- Identifier, version/revision, and status of the object
- Usage (direct, indirect)
- Used building block level
- As group
- [Used building block] Identifier, revision, and status

Direct usage: Identifier of the custom building block for which the usage list has been compiled.

Indirect usage: Identifier of the intermediate-level-approved custom building.

- Path information of the recipe, workflow, custom building block elements
If the path belongs to a group, the last element identifier is that of the first element of the group.

Additionally, the usage list provides a list of changed objects whose objects information cannot be refreshed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

4.7.3 *GID-2666515 Filter (SR3146.10.6.3)*

The usage list supports the following filter options:

- Usages [Any (default), All, Direct, Indirect]
- Status category [Any, All, Edit, Verification, Valid (default), Retired]

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5 Comparing Master Recipes, Master Workflows, and Custom Building Blocks (SR3146.15+)

PharmaSuite supports the approval of master recipes, master workflows, and custom building blocks that are based on an approved version with a comparison mechanism.

The comparison baseline of a master recipe, master workflow, or custom building block defines the object to be compared with the current object.

The baseline is a header attribute of the **master recipe** (SR3146.9.3.1) object ([GID-2666448](#)), the **master workflow** (SR3146.9.12.1) object ([GID-2666450](#)), and the **custom building block** (SR3146.10.4) object ([GID-2666042](#)).

The comparison result is displayed in the **Comparison** (SR3146.9.2.19+) window ([GID-2666577](#)). It informs a reviewer of the recipe, workflow, or custom building block of the differences found by the comparison mechanism. Thus, the reviewer gets a summary of the differences.

5.1 Comparison Algorithm (SR3146.15.1+)

The comparison algorithm covers attributes, parameters, procedural elements within their SFC context, MFC-related settings, and the execution-relevant layout of a master recipe, master workflow, or custom building block.

5.1.1 Comparing Header Attributes (SR3146.15.1.1+)

5.1.1.1 GID-2667564 MASTER RECIPE-SPECIFIC HEADER ATTRIBUTES (SR3146.15.1.1.1)

Each attribute is compared with its baseline, except for:

- Identifier
- Version
- Comparison baseline
- Status
- Valid from and Valid until

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

5.1.1.2 GID-2667565 MASTER WORKFLOW-SPECIFIC HEADER ATTRIBUTES (SR3146.15.1.1.2)

Each attribute is compared with its baseline, except for:

- Identifier
- Version
- Comparison baseline
- Status
- Valid from and Valid until

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.1.3 GID-2667566 CUSTOM BUILDING BLOCK-SPECIFIC HEADER ATTRIBUTES (SR3146.15.1.1.3)

Each attribute is compared with its baseline, except for:

- Identifier
- Revision
- Comparison baseline
- Usage as <phase or operation> group
- Status
- Approved on and Approved by
- Archived on and Archived by

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.2 GID-2666517 Comparing Element Attributes (SR3146.15.1.2)

Each attribute is compared with its baseline.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Comparing Master Recipes, Master Workflows, and Custom Building Blocks (SR3146.15+)

5.1.3 GID-2666518 Comparing Source Attributes (SR3146.15.1.3)

Only the **Custom** and **Group** source attributes and the **System** identifier attribute is compared with its baseline.

The following **System** attributes are not compared:

- Short description
- Usable in
- Trigger
- Server-run
- Pause-aware

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4 Comparing Parameter Attributes (SR3146.15.1.4+)

5.1.4.1 GID-2667567 MATERIAL PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.1)

Each attribute is compared with its baseline, except for:

- Material short description

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.2 GID-2667568 MATERIAL FLOW CONTROL-SPECIFIC ATTRIBUTES (SR3146.15.1.4.2)

Each attribute is compared with its baseline.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.3 GID-2667569 EQUIPMENT REQUIREMENT PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.3)

Each attribute is compared with its baseline, except for:

- Short description
- Description
- EQM level

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.4 GID-2667570 WORK CENTER ASSIGNMENT PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.4)

Each attribute is compared with its baseline, except for:

- Description
- Storage area

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.5 GID-2667571 PRIVILEGE PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.5)

Each attribute is compared with its baseline, except for:

- Default reason (1st and 2nd)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.6 GID-2667572 CAPABILITY PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.6)

Each attribute is compared with its baseline.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.4.7 GID-2667573 PROCESS PARAMETER-SPECIFIC ATTRIBUTES (SR3146.15.1.4.7)

Each attribute is compared with its baseline, except for:

- Content (concatenation of other attributes that are being compared)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- Comparing Master Recipes, Master Workflows, and Custom Building Blocks (SR3146.15+)

5.1.5 Comparing Procedural Elements (SR3146.15.1.5+)

5.1.5.1 GID-2667574 TRANSITION-SPECIFIC ATTRIBUTES (SR3146.15.1.5.2)

Each attribute is compared with its baseline.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.5.2 GID-2667575 RELATION-SPECIFIC CHARACTERISTICS (SR3146.15.1.5.1)

The following attributes are compared with its baseline:

- Existence of elements
- Successor relations of elements
- Branching type (sequence, selection, simultaneous)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.1.5.3 GID-2667576 LOCATION-SPECIFIC CHARACTERISTICS (SR3146.15.1.5.3)

The following attribute is compared with its baseline:

- Position (relative layout) of elements in simultaneous branches

The position of elements in simultaneous branches can affect the preview rendering during execution and the sequence of elements within the batch report.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.2 GID-2666051 Defining a Comparison Baseline (SR3146.15.2)

The system allows to define a comparison baseline for master recipes and master workflows in the **Edit** status ([GID-2666039](#)) and custom building blocks in the **Draft** status ([GID-2666044](#)).

The following rules apply to comparison baseline objects:

- For master recipes or master workflows, they must be in the **Scheduled**, **Valid**, or **Archived** status ([GID-2666039](#)).
- For custom building blocks, they must be in the **Approved** or **Archived** status ([GID-2666044](#)).

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

5.3 GID-2666052 Performing a Comparison (SR3146.15.3)

To perform a comparison, a comparison baseline must be assigned. As long as no comparison baseline is assigned, the system displays an appropriate message.

When a comparison has been performed, the system displays the result in the list panel of the **Comparison (SR3146.9.2.19+)** window ([GID-2666577](#)).

- If no differences have been detected, the system displays an appropriate message.
- If differences have been detected, the system displays the details.
- If the current object has been changed in the meantime at the current client, the system displays an appropriate message.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6 Management of Change Requests (SR3146.12+)

A change request consists of its **header attributes** (SR3146.12.1) data ([GID-2666054](#)), the **scope definition** (SR3146.12.3+) feature ([GID-2666057](#)), and the **action list** (SR3146.12.4) feature ([GID-2666058](#)).

The scope of a change request is defined by the old (to be replaced) and new (replacing) building blocks and by the master recipes/master workflows and custom building blocks selected from the usage list that shall be subject to changing.

The action list shows all master recipes/master workflows and custom building blocks which are to be changed.

During the **execution of a change request** (SR3146.12.5) operation ([GID-2666059](#)), the replacement of building blocks follows the same rules as for the **Smart Replace** (SR3146.9.10.10) operation ([GID-2666471](#)).

The life cycle of a change request is controlled by the **status management of change requests** (SR3146.12.2+) feature ([GID-2666056](#)).

The change request can be scheduled to be executed in background by the **Scheduled Execution of Change Requests** (SR3146.12.7) operation ([GID-2666060](#)).

6.1 GID-2666054 Header Attributes (SR3146.12.1)

The change request object supports the following header attributes:

- Basic data:
 - Identifier
 - Description
 - Comparison baseline handling (Keep, Update, Delete)
 - Planned execution time
- Recipe-/workflow-related data:
 - Target status (Edit, Verification, All valid statuses)
 - Effective date
- Building block-related data:
 - Target status (Draft, Verification, Approved)
- Status data:
 - Status

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Additional data:

Structure level

System building block (true/false)

The attributes are maintained in the **header component-specific (SR3146.9.2.15)** property window ([GID-2667602](#)).

The **Target status** attributes define if the related new recipe or workflow versions are automatically moved to the **Valid** status ([GID-2666039](#)) and if the custom building block revisions are automatically moved to the **Approved** status ([GID-2666044](#)), respectively.

The **Comparison baseline handling** attribute allows to

- keep the comparison baseline of the old component to also be the baseline of the new component;
- update (default setting) the comparison baseline of the new component according to the most recent version/revision from which it was created;
- delete the comparison baseline, so that for the new component no comparison baseline is defined even if a comparison baseline was defined for the old component.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.2 GID-2666055 Workbench Object Operations (SR3146.12.6)

The following operations are supported for change requests:

- Create new change request
- Open existing (see **Open (SR3146.9.2.20+)** dialog ([GID-2666571](#)))
- View locked change request ([GID-2666523](#))
- Save (current or all)
- Copy (Save as...)
- Rename
- Delete
- Close (current or all)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.2.1 GID-2666521 Open Dialog - Hide Objects (SR3146.12.6.3)

By default, change requests that are **Finished** or in a **Retired** status (e.g. **Archived**, **Obsolete**) are excluded from the search result.

The inclusion of change requests that are **Finished** or in a **Retired** status can be switched on.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.2.2 GID-2666522 Open Dialog for Protected Objects (SR3146.12.6.2)

A change request can hold objects that are protected by an access privilege, like a new or old custom building block or any object that is in the scope of the change request according to the action list (master recipes, master workflows, and custom building blocks). In case a protected object is involved: The system shall only allow to open change requests whose access privileges of any of the protected objects match the access privilege of the logged-in user.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.2.3 GID-2666523 Workbench Object Operations - View Locked Change Request (SR3146.12.6.1)

If a change request is locked by another user, the system allows to view the change request without the possibility to change it.

The change request can be copied (save as). Operations that do not change a change request are also available (e.g. status history).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
-

6.3 Status Management of Change Requests (SR3146.12.2+)

6.3.1 GID-2666524 Master Recipe-specific Change Requests (SR3146.12.2.2)

The version control (SR3146.4.5) function ([GID-2666078](#)) supports the following default transitions for master recipe-specific change requests:

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
1.1 - Initial » Draft	---	Automatic transition.
1.2 - In review » Draft	Status_Trans_ChangeRequest_InReview-Draft	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
2.1 - Draft » In review	Status_Trans_ChangeRequest_Draft-InReview	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor) Completeness of old/new building block pairs is checked. If the action list contains an object of the Master Recipe type, the target status for Recipe-related Data needs to be set. If the action list contains an object of any building block type, the target status for Building Block-related Data needs to be set.
3.1 - In review » Approved for auto-run	Status_Trans_ChangeRequest_InReview-ApprovedAutoRunnable	Default user group: Qualified Person Planned execution time needs to be set and be equal to or earlier than the effective date.
4.1 - In review » Approved	Status_Trans_ChangeRequest_InReview-Approved	Default user group: Qualified Person

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
4.2 - Approved for auto-run » Approved	Status_Trans_ChangeRequest_ApprovedAutoRunnable-Approved	Default user group: Qualified Person
5.1 - Approved » In process	Status_Trans_ChangeRequest_Approved-InProcess	Automatic transition when the change request is being executed. Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
5.2 - Approved for auto-run » In process	---	Automatic transition when the change request is being executed by the background job.
6.1 - In process » Finished	---	Automatic transition when the change request execution is completed.
6.2 - Aborted » Finished	Status_Trans_ChangeRequest_Canceled-Finished	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
6.3 - In process » Finished	Status_Trans_ChangeRequest_InProcess-Finished	Manual transition, only available if the execution has been interrupted (e.g. resume during execution). Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
7.1 - Finished » Archived	---	---

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
7.2 - Obsolete » Archived	---	---
8.1 - Draft » Obsolete	---	---
8.2 - In review » Obsolete	Status_Trans_ChangeRequest_InReview-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
8.3 - Approved » Obsolete	Status_Trans_ChangeRequest_Approved-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
8.4 - Aborted » Obsolete	Status_Trans_ChangeRequest_Canceled-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
8.5 - In process » Obsolete	Status_Trans_ChangeRequest_InProcess-Obsolete	Manual transition, only available if the execution has been interrupted (e.g. resume during execution). Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)
8.6 - Approved for auto-run » Obsolete	Status_Trans_ChangeRequest_ApprovedAutoRunnable-Obsolete	Default user group: Qualified Person
8.7 - Auto-run failed » Obsolete	Status_Trans_ChangeRequest_AutoRunnableFailed-Obsolete	Default user groups: Recipe Author, Qualified Person, Supervisor (Shop Floor)

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
9.1 - In process » Aborted	Status_Trans_ChangeRequest_InProcess-Canceled	Automatic transition when the change request is canceled with the ESC key.
10.1 - In process » Auto-run failed	---	Automatic transition when the change request executed by the background job failed.

The diagram illustrates the **MESChangeRequestStatusGraph** flexible state model.

6.3.2 GID-2666525 Master Workflow-specific Change Requests (SR3146.12.2.3)

The **version control (SR3146.4.5)** function ([GID-2666078](#)) supports the following default transitions for master workflow-specific change requests:

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
1.1 - Initial » Draft	---	Automatic transition.
1.2 - In review » Draft	Status_Trans_ChangeRequest_WF_InReview-Draft	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
2.1 - Draft » In review	Status_Trans_ChangeRequest_WF_Draft-InReview	Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor) Effective date in the past is not allowed. Completeness of old/new building block pairs is checked. If the action list contains an object of the Master Workflow type, the target status for Workflow-related Data needs to be set. If the action list contains an object of any building block type, the target status for Building Block-related Data needs to be set.

Transition (ID - From » To)	Signature (Access privilege, according to FSM)	Additional information
3.1 - In review » Approved for auto-run	Status_Trans_ChangeRequest_WF_InReview-ApprovedAutoRunnable	Default user group: Qualified Person Planned execution time needs to be set and be equal to or earlier than the effective date.
4.1 - In review » Approved	Status_Trans_ChangeRequest_WF_InReview-Approved	Default user groups: Workflow Author, Qualified Person Effective date in the past is not allowed.
4.2 - Approved for auto-run » Approved	Status_Trans_ChangeRequest_WF_ApprovedAutoRunnable-Approved	Default user group: Qualified Person
5.1 - Approved » In process	Status_Trans_ChangeRequest_WF_Approved-InProcess	Automatic transition when the change request is being executed. Default user groups: Workflow Author, Qualified Person, Supervisor (Shop Floor)
5.2 - Approved for auto-run » In process	---	Automatic transition when the change request is being executed by the background job.
6.1 - In process » Finished	---	Automatic transition when the change request execution is completed.

The diagram illustrates the **MESChangeRequestMasterWorkflowStatusGraph** flexible state model.

Figure 7: Master workflow-specific change request - status graph

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

6.3.3 GID-2666526 Scope Validity Check (SR3146.12.2.1)

During the status transitions of a change request to **In review**, **Approved**, and **In process**, the system checks if the defined scope of the change request is still valid. This applies to the status of the new building blocks and to the status/version of any affected object (master recipe, master workflow, or custom building block).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

6.3.4 GID-2666527 Change Status Dialog (SR3146.12.2.4)

Errors occurring during the status transition are displayed and can be copied to the clipboard.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.4 Scope Definition (SR3146.12.3+)

The scope definition of a change request is composed of the **definition of old/new building blocks (SR3146.12.3.1)** task ([GID-2666528](#)) and the **selection from the usage list (SR3146.12.3.2)** task ([GID-2666529](#)).

6.4.1 GID-2666528 Define Old/New Building Blocks (SR3146.12.3.1)

The system allows to define pairs of old and new building blocks for a change request. In case the new building block contains unresolved external references at locked parameters, the system displays an information message that the external references will be resolved during execution of the change request. During the execution of the change request, the old building blocks are replaced by the new building blocks.

The following rules apply:

- All building block levels of the procedural structure ([GID-2666452](#)) are supported (procedure, unit procedure, operation, phase).
- The first selected old or new building block (group) defines the structure level of the change request. It is stored with the change request header data and visible in the column headers of the building block table. All further selected building blocks (building block groups) must have the same structure level.
- Operation groups belong to the structure level of unit procedures and phase groups to the structure level of operations.
- On the structure levels of unit procedures and operations, the old and new building blocks (building block groups) additionally display their **Usage as group** setting.
- An old building block (group) must be either in the **Approved** or the **Archived** statuses ([GID-2666044](#)).
- A new building block (group) must be in the **Approved** status ([GID-2666044](#)).
- A building block can only be selected once as old building block.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

TIP

An exception to this rule is a building block with **Allowed** as **Usage as group** setting, which may be used twice.

- An old building block (group) cannot also be a new building block (group) of the same or any other old/new pair of the change request.
- An old building block group with **Mandatory** as **Usage as group** setting requires a new building block with either **Allowed** or **Mandatory** as its **Usage as group** setting.
- An old building block group with **Not allowed** as **Usage as group** setting requires a new building block with either **Allowed** or **Not allowed** as its **Usage as group** setting.
- The system allows to remove an old/new building block pair from the list.
- After removing all old/new building block pairs from the list, the structure level of the change request is reset.
- The access privilege for the protection of a custom building block from unauthorized access has no impact on the replacement. It is always performed.

To allow greater flexibility when defining the old and new building block pairs, the following rules are checked later during the next change request status transition and can also depend on the occurrences selected in the usage list:

- If a building block with **Allowed** as **Usage as group** setting is selected as old building block and in the usage list, there is an element selected that uses the old building block as group, the new building block must have either **Allowed** or **Mandatory** as its **Usage as group** setting.
- If a building block with **Allowed** as **Usage as group** setting is selected as old building block and in the usage list, there is an element selected that uses the old building block as stand-alone unit procedure or operation, the new building block cannot have **Mandatory** as **Usage as group** setting.
- If an old building block contains a group, this group cannot be selected as old building block in another replacement pair.
- If a building block with **Allowed** as **Usage as group** setting is selected twice as old building block, one replacement pair must hold a new building block with **Not allowed** as **Usage as group** setting, while the other replacement pair must hold a new building block with **Mandatory** as **Usage as group** setting.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.4.2 GID-2666529 Select from Usage List (SR3146.12.3.2)

Based on the definition of the old building block, the system allows to compile a usage list (**SR3146.10.3**) for custom building blocks ([GID-2666047](#)) and also a usage list (**SR3146.10.6**) for system phases ([GID-2666048](#)) to select a subset of artifacts to be changed within the scope of the change request.

The following rules apply:

- The **Compile usage list** function is only available for change requests in the **Draft** status ([GID-2666056](#)).
 - The usage list only includes master recipes and master workflows in the **Valid** or **Scheduled** statuses ([GID-2666039](#)) and building blocks in the **Approved** or **Archived** statuses ([GID-2666044](#)).
- Only those usages are displayed for which the old building block was in the **Approved** status ([GID-2666044](#)) when it was copied (i.e. **Draft** usages are filtered out).
- If the status of a master recipe, master workflow, or building block has changed since the last compilation of the usage list and the change request is still in the **Draft** status, the system notifies the user of the status change and updates the usage list. Example: Master recipes whose status has been changed to **Archived** are removed from the list.
 - If an object (e.g. master recipe) selected for a change includes indirect usages of the old building block, in the usage list, the system selects and marks the affected custom building blocks to be changed within the scope of the change request.
 - If an object (e.g. master recipe) includes indirect usages of the old building block and the object is unselected, in the usage list, the system unselects the affected custom building blocks that were previously selected due to their indirect usage.
 - The system indicates visually if an object was selected manually, due to an indirect usage, or both.
 - For objects that are protected by an access privilege: The system shall only provide objects whose access privilege matches the access privilege of the logged-in user.

The following filter attributes can be set when compiling the usage list:

- Material (product): Only master recipes and their directly or indirectly used objects are displayed if the master recipe's material (product) identifier matches the filter criteria.
The S88DefaultWorkflowMaterial can be used for master workflows to display only master workflows and directly and indirectly used objects of the master workflows.
- Equipment class: Only objects are displayed that, in any of their elements, use the selected equipment class(es) as equipment requirement or use the selected equipment class(es) within an expression that contains the **Equipment is member of class** function. These objects, objects that directly or indirectly use these objects, or objects that are used by these objects are displayed.
- Work center: Only objects with unit procedures, unit procedures that have a work center assignment that matches the filter criteria, or objects that are used by these objects are displayed.

-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.5 GID-2666058 Action List (SR3146.12.4)

The action list represents all master recipes, master workflows, and custom building blocks that are in the scope of the change request, i.e., that are selected in the usage list and hence require a new version/revision due to the defined building block replacement.

The action list provides the following information for each artifact:

- Object type
- Identifier
- Old object [version/revision and status before and after executing the change request]
- New object [version/revision and status]
- Progress
- Result
- Error

An artifact of the action list represents one or more of the defined pairs of old/new building blocks.

It is possible to define a **planned execution time** for the change request in the **Draft** status if the change request shall be processed in the background. For details, please refer to the **Scheduled Execution of Change Requests (SR3146.12.7)** requirement ([GID-2666060](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.6 GID-2666059 Execute Change Request (SR3146.12.5)

During the automatic execution of a change request, new versions/revisions of the affected master recipes/master workflows/custom building blocks are created and the defined building blocks are replaced.

Only one new version/revision is created per action list object, regardless of how many replacements of different building blocks are performed according to the old/new building block pairs definitions. If one of the replacements fails with an error, no new version/revision of the affected object is created.

Related to the change request, the following rules apply:

- Only change requests in the **Approved** status ([GID-2666056](#)) can be executed.
- The system sets the status of a change request automatically to **In process** when the change request is being executed.
- The system sets the status of a change request automatically to **Finished** when the change request execution is completed.

Related to the artifacts displayed in the **Action list (SR3146.12.4)** tab ([GID-2666058](#)), the following rules apply:

- The action list is processed bottom-up (first artifacts on system phase level, last the master recipes/workflows).
- The replacement of building blocks follows the rules of the **Smart Replace (SR3146.9.10.10)** operation ([GID-2666471](#)).
- The system tries to automatically resolve external references in expressions.
Each resolved reference is indicated by an information message that is stored with the master recipe or master workflow.
- The system automatically transitions new revisions of building blocks to the target status that is defined with the building block-related data in the **header attributes (SR3146.12.1)** data ([GID-2666054](#)) of the change request. In case the old object status is **Archived**, the new object status is **Archived** again, regardless of the target status definition.
- Master recipes and master workflows in the **Valid** or **Scheduled** status ([GID-2666039](#)) are all considered to represent valid recipes and workflows. New versions will be transitioned according to their originally defined period of validity.
- The system automatically transitions new versions of master recipes and master workflows to the target status that is defined with the recipe-/workflow-related data in the **header attributes (SR3146.12.1)** data ([GID-2666054](#)) of the change request.
- The following descriptions reflect that the **Target status** attribute has been set to **All valid statuses**.
(If it has been set to **Edit** or **Verification**, new versions of master recipes and master workflows in the **Edit** or **Verification** statuses are created. Old versions of affected master recipes or master workflows are not changed, i.e. their statuses remain unchanged.)
- If the effective date of the change request is not defined (or today), an affected master recipe or master workflow in the **Valid** status is archived and a new version of the master recipe or master workflow in the **Valid** status is created.
- If the effective date of the change request is in the future and is due while an affected master recipe or master workflow is in the **Valid** status, the master recipe's or master workflow's period of validity is shortened and a new version of the master recipe or master workflow in the **Scheduled** status is created. For this new version in the **Scheduled** status, the period of validity starts on the effective date of the change request and lasts until the end of the original period of validity.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- If the effective date of the change request is due before the period of validity of an affected master recipe or master workflow in the **Scheduled** status starts, a new version of the master recipe or master workflow is created in the **Scheduled** status based on the original period of validity of the previous version.
- If the effective date of the change request is in the future and is due while an affected master recipe or master workflow is in the **Scheduled** status, the master recipe's or master workflow's future period of validity is shortened and another version of the master recipe or master workflow in the **Scheduled** status is created. For this new version, the period of validity starts on the effective date of the change request and lasts until the end of the original period of validity.
- For all status transitions related to master recipes and master workflows that require an electronic signature, a silent signature is recorded whose comment is filled with the data of the signing operator(s) that approved the change request.
- In case an error occurs during execution of a change request, the result for the current artifact is recorded in the **Action list (SR3146.12.4)** tab ([GID-2666058](#)) and the system proceeds with the next artifact to be changed.

Examples for error conditions: Status has changed since the compilation of the usage list, procedural structure is broken, unresolved external references cannot be resolved, etc.

- As only master recipes and master workflows in the **Valid** or **Scheduled** status ([GID-2666039](#)) can be part of the action list, master recipes and master workflows can never be transitioned by a change request to a status that is higher than the original master recipe's or master workflow's status prior to the execution of the change request.
- For all status transitions of master recipes and master workflows that occur in the context of a change request execution, the master recipe- and master workflows-specific configurations related to signature privileges and e-mail notifications are ignored by the system.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.6.1 **GID-2666530 Execution Status (SR3146.12.5.2)**

The change request supports the following interim execution statuses:

- Not started
- Processing
- Canceling (triggered by the ESC key)

The change request supports the following final execution statuses:

- Canceled (subsequent to the **Canceling** interim execution status)
- Canceled (unexpected, after a resume of a running change request)
- Completed

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.6.2 *GID-2666531 Cancel Change Request (SR3146.12.5.1)*

During the automatic execution of a change request, the execution of the change request can be canceled.

The following rules apply:

- The system completes the replacement-related steps of the artifacts that are displayed in the **Action list (SR3146.12.4)** tab ([GID-2666058](#)) and are currently in process.
- All artifacts displayed in the **Action list (SR3146.12.4)** tab ([GID-2666058](#)) that have not been started yet are marked as **Canceled**.
- The system sets the status of the change request automatically to **Aborted** when the execution of the change request has been canceled.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

6.7 *GID-2666060 Scheduled Execution of Change Requests (SR3146.12.7)*

Change requests in the **Approved for auto-run** status are monitored by the system and executed if its planned execution time has passed. The execution is performed as described with the **Execute Change Request (SR3146.12.5)** operation ([GID-2666059](#)).

If the action list contains an error for any artifact, the change request is set to the **Auto-run failed** status instead of the **Finished** status.

7 Master Recipe Report - Batch (SR3146.11+)

The master recipe report - batch represents the S88-compliant structure of a master recipe and its components in a printable way.

7.1 GID-2666062 Print MR Report (SR3146.11.1)

The system allows the user to print a master recipe report that represents the S88-compliant structure of a master recipe. If desired, the comparison result can be excluded from the report.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.2 GID-2666063 MR Report - SFC Pagination (SR3146.11.1.1)

Displays the current graph structure (SFC flow) in a preview window for printing including pagination preview.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.3 GID-2666064 MR Report Header (SR3146.11.2)

The header of the MR report includes the following data:

- Placeholder for a customer logo
- Material ID and Short description
- MR identifier
- MR version

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.4 GID-2666065 MR Report Footer (SR3146.11.3)

The footer of the MR report includes the following data:

- Rockwell Automation logo

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Printed by: <user name and login>
- Printed from: <station/work center>
- Database: <database name>
- Printed on: <local time and server time>
- Page x of y

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.5 GID-2666066 MR Report Cover Page (SR3146.11.5)

The cover page of the MR report includes the following data:

- Report title
- Identifier
- Description
- Comparison baseline
- Material identifier and Short description
- Planned quantity
- Version and Status
- Valid from and Valid until
- Method and Method description

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6 MR Report Sections (SR3146.11.4+)

The MR report includes the following sections:

7.6.1 GID-2666532 MR report - Table of contents (SR3146.11.4.15)

The table of contents of the MR report.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.2 GID-2666533 MR report - Basic data (SR3146.11.4.1)

Section for the basic data of the master recipe, which includes:

- Identifier
- Description
- Comparison baseline
- Material identifier and Short description
- Planned quantity
- Minimum quantity and Maximum quantity
- Version and Status
- Valid from and Valid until
- Registration number
- Method and Method description
- Usage type
- Review mode
- Access privilege
- Packaging levels

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.3 GID-2666534 MR report - Comments (SR3146.11.4.2)

Section for the comments related to the master recipe.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.4 GID-2666535 MR report - Approval record (SR3146.11.4.3)

Section for the approval record of the current version of the master recipe, which includes:

- For the creation of the recipe:
Action, role, logged-in user, reason for creation
- For the scheduling of the recipe:
Action, role, signatures with timestamp, signature comment

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- For the automatic approval of the recipe due to schedule:
Action, user with timestamp
- For the approval of the recipe:
Action, role, signatures with timestamp, signature comment

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

7.6.5 GID-2666536 MR report - Bill of materials (SR3146.11.4.4)

Formula section contains the bill of materials of the master recipe, which includes the following header attributes and columns:

- Header attributes:
 - Material [identifier and short description]
 - ERP BOM alternative
 - ERP BOM base quantity
 - ERP BOM released
- Columns:
 - Position
 - Material [identifier and short description]
 - Material type
 - Planned quantity
 - Fixed quantity

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.6 GID-2666537 MR report - Work center assignments (SR3146.11.4.5)

Formula section contains the list of work centers of the master recipe, which includes the following columns:

- Type
- Identifier
- Description
- Used in recipe element

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.7 *GID-2666538 MR report - Material flow control (SR3146.11.4.6)*

Formula section contains the material flow control data of the master recipe, which includes the following columns:

- MFC item
- Position
- Material [identifier and short description]
- Planned quantity (input)
- Planned quantity (output)
- Output unit procedure
- Input unit procedure
- Target MFC item

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.8 *GID-2666539 MR report - Critical process parameters (SR3146.11.4.7)*

Formula section contains the critical process parameters of the master recipe, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

7.6.9 GID-2666540 MR report - Critical quality attributes (SR3146.11.4.8)

Formula section contains the critical quality attributes of the master recipe, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.10 GID-2666541 MR report - Key process parameters (SR3146.11.4.9)

Formula section contains the key process parameters of the master recipe, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.11 GID-2666542 MR report - Key quality attributes (SR3146.11.4.10)

Formula section contains the key quality attributes of the master recipe, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.12 GID-2666543 MR report - Procedure (SR3146.11.4.11)

The procedure-related data of the MR report includes the following details:

- Basic information
- Element data
- Custom source data
- List of steps
- List of transitions
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.13 GID-2666544 MR report - Unit procedure (SR3146.11.4.12)

For each unit procedure, the MR report includes the following details:

- Basic information
 - Element data
 - Custom source data
- Work center information
- Capability information (e.g. Detachable capability, Pause-enabled capability)
- Privilege information
- List of steps
- List of transitions
- List of used groups (only operation groups used in a read-only status)
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.14 GID-2666545 MR report - Operation (SR3146.11.4.13)

For each operation, the MR report includes the following details:

- Basic information
 - Element data

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Custom source data
- Group source data
- Station information
- Capability information (e.g. Detachable capability, Event-triggered capability)
- Privilege information
- List of steps
- List of transitions
- List of used groups (only phase groups used in a read-only status)
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.15 GID-2666546 MR report - Phase (SR3146.11.4.14)

For each phase, the MR report includes the following details:

- Basic information
 - Element data
 - Custom source data
 - Group source data
 - System source data
- Input material information
 - Dispensing-specific material information (only for Dispense operations)
 - Output material information
 - Equipment requirement information
 - Privilege information
 - Process parameter information

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

7.6.16 GID-2666547 MR report - Comparison with baseline (SR3146.11.4.17)

For each comparison-specific type, the MR report includes the following details:

- Mode
- Path
- Type
- Identifier
- Predecessor
- Successor
- Attribute
- New value
- Old value

If no differences have been detected between the master recipe and its comparison baseline, no comparison baseline is defined, or the comparison baseline is not available, the report includes an appropriate message instead of the table.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8 Master Workflow Report (SR3146.13+)

The master workflow report represents the S88-compliant structure of a master workflow and its components in a printable way.

8.1 GID-2666069 Print MWF Report (SR3146.13.1)

The system allows the user to print a master workflow report that represents the S88-compliant structure of a master workflow. If desired, the comparison result can be excluded from the report.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.2 GID-2666070 MWF Report - SFC Pagination (SR3146.13.1.1)

Displays the current graph structure (SFC flow) in a preview window for printing including pagination preview.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.3 GID-2666071 MWF Report Header (SR3146.13.2)

The header of the MWF report includes the following data:

- Placeholder for a customer logo
- Processing name
- Master workflow identifier and Short description
- Master workflow version

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

8.4 GID-2666072 MWF Report Footer (SR3146.13.3)

The footer of the MWF report includes the following data:

- Rockwell Automation logo
- Printed by: <user name and login>
- Printed from: <station/work center>
- Database: <database name>
- Printed on: <local time and server time>
- Page x of y

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.5 GID-2666073 MWF Report Cover Page (SR3146.13.5)

The cover page of the MWF report includes the following data:

- Report title
- Identifier
- Processing name
- Short description
- Version and Status
- Valid from and Valid until

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6 MWF Report Sections (SR3146.13.4+)

The MWF report includes the following sections:

8.6.1 GID-2666548 MWF report - Table of contents (SR3146.13.4.13)

The table of contents of the MWF report.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.2 GID-2666549 MWF report - Basic data (SR3146.13.4.1)

Section for the basic data of the master workflow, which includes:

- Identifier
- Processing name
- Short description
- Description
- Comparison baseline
- Version and Status
- Valid from and Valid until
- Review mode
- Access privilege
- [Workflow] Type
- One-click startable
- Execution prefix
- Production-relevant
- Appendable during processing

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.3 GID-2666550 MWF report - Comments (SR3146.13.4.2)

Section for the comments related to the master workflow.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.4 GID-2666551 MWF report - Approval record (SR3146.13.4.3)

Section for the approval record of the current version of the master workflow, which includes:

- For the creation of the workflow:
Action, role, logged-in user, reason for creation
- For the scheduling of the workflow:
Action, role, signatures with timestamp, signature comment

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- For the automatic approval of the workflow due to schedule:
Action, user with timestamp
- For the approval of the workflow:
Action, role, signatures with timestamp, signature comment

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

8.6.5 GID-2666552 MWF report - List of materials (SR3146.13.4.15)

Formula section contains the list of materials of the master workflow, which includes the following columns:

- Position
- Material [identifier and short description]

8.6.6 GID-2666553 MWF report - Work center assignments (SR3146.13.4.4)

Formula section contains the list of work centers of the master workflow, which includes the following columns:

- Type
- Identifier
- Description
- Used in workflow element

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.7 GID-2666554 MWF report - Critical process parameters (SR3146.13.4.5)

Formula section contains the critical process parameters of the master workflow, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.8 GID-2666555 MWF report - Critical quality attributes (SR3146.13.4.6)

Formula section contains the critical quality attributes of the master workflow, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.9 GID-2666556 MWF report - Key process parameters (SR3146.13.4.7)

Formula section contains the key process parameters of the master workflow, which includes the following columns:

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.10 GID-2666557 MWF report - Key quality attributes (SR3146.13.4.8)

Formula section contains the key quality attributes of the master workflow, which includes the following columns:

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- Identifier
- Content
- Path

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.11 GID-2666558 MWF report - Procedure (SR3146.13.4.9)

The procedure-related data of the MWF report includes the following details:

- Basic information
 - Element data
 - Custom source data
- List of steps
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.12 GID-2666559 MWF report - Unit procedure (SR3146.13.4.10)

For each unit procedure, the MWF report includes the following details:

- Basic information
 - Element data
 - Custom source data
- Work center information
- Capability information (e.g. Detachable capability, Pause-enabled capability)
- Privilege information
- List of steps
- List of transitions
- List of used groups (only operation groups used in a read-only status)
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.13 GID-2666560 MWF report - Operation (SR3146.13.4.11)

For each operation, the MWF report includes the following details:

- Basic information
- Element data
- Custom source data
- Group source data
- Station information
- Capability information (e.g. Detachable capability)
- Privilege information
- List of steps
- List of transitions
- List of used groups (only phase groups used in a read-only status)
- Graphical representation of the SFC flow

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.14 GID-2666561 MWF report - Phase (SR3146.13.4.12)

For each phase, the MWF report includes the following details:

- Basic information
 - Element data
 - Custom source data
 - Group source data
 - System source data
- Input material information
- Output material information
- Equipment requirement information
- Privilege information
- Process parameter information

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

8.6.15 GID-2666562 MWF report - Comparison with baseline (SR3146.13.4.17)

For each comparison-specific type, the MWF report includes the following details:

- Mode
- Path
- Type
- Identifier
- Predecessor
- Successor
- Attribute
- New value
- Old value

If no differences have been detected between the master workflow and its comparison baseline, no comparison baseline is defined, or the comparison baseline is not available, the report includes an appropriate message instead of the table.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9 Designer Workbench (SR3146.9+)

As requirements have been restructured compared to the original DRS document, this section also contains requirements of other requirement groups than SR3146.9+.

For recipe or workflow authors, the graphical Recipe and Workflow Designer workbench provides the means to create and maintain master recipes, master workflows, and custom building blocks (cBB).

This section provides the requirements related to Designer workbench itself:

- **Workbench usability (SR3146.9.1+)** requirements ([GID-2666044](#))
- **Workbench UI elements (SR3146.9.2+)** requirements ([GID-2666077](#))
- **Version control (SR3146.4.5)** requirements ([GID-2666078](#))
- **Library concept (SR3146.9.11+)** requirements ([GID-2666079](#))

9.1 Workbench Usability (SR3146.9.1+)

The graphical Designer workbench supports usability aspects related to its graphical user interface and general handling. Both are targeted to minimize time to result significantly.

9.1.1 Custom Building Block Image

The custom building block image provides access to the following data:

Figure 8: Custom building block image

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Figure 9: Custom building block image

Figure 10: Custom building block image

Upper left section:

- Materials as process input (SR3146.9.5.1) data ([GID-2667346](#)).
- Equipment parameter:
Equipment requirement (class) (SR3146.9.5.5) data ([GID-2667354](#))
Work center (SR3146.9.5.4) data ([GID-2667350](#)), for unit procedures only
Station (SR3146.9.5.8) data ([GID-2667352](#)), for operations only.

Lower left section:

- Materials as process output (SR3146.9.6.1) data ([GID-2667373](#)).

Upper right section:

- **Signature privilege (SR3146.9.5.3)** data ([GID-2667348](#)).
- Capabilities
 - Detachable - Operation (SR3146.9.5.9.1)** capability ([GID-2667363](#))
 - Event-triggered (SR3146.9.5.9.2)** capability ([GID-2667364](#))
 - Escalation-enabled (SR3146.9.5.9.3)** capability ([GID-2667365](#))
 - Trigger-enabled (SR3146.9.5.9.4)** capability ([GID-2667366](#))
 - Server-run (SR3146.9.5.9.5)** capability ([GID-2667367](#))
 - Auto-startable (SR3146.9.5.9.6)** capability ([GID-2667368](#))
 - Pause-enabled (SR3146.9.5.10.1)** capability ([GID-2667370](#))
 - Detachable - Unit procedure (SR3146.9.5.10.2)** capability ([GID-2667371](#)).
- Capabilities (Does not apply to Workflow Designer.)
Abort-and-reactivate-enabled (SR3146.9.5.10.3) capability ([GID-2667372](#)).
- **Process parameter (SR3146.9.7+)** data ([GID-2792500](#)).

Upper center section:

- **Transition (SR3146.9.5.11)** data ([GID-2667360](#)).

Center section:

- Name of the building block.

Lower center section:

- **Frozen (SR3146.9.13.2)** markers ([GID-2666564](#))(if the used custom building block is in the Verification or Approved statuses).

9.1.2 **GID-2666564 Process View (SR3146.9.1.1)**

A process-related view is available to support the creation and maintenance of procedural elements of the **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.2.1 **GID-2667577 WORKBENCH - START AND END STEPS (SR3146.9.1.1.1)**

On each level of the procedural structure, Start and End steps are available. Thus, a recipe or workflow author can model branches and loops that include the first or final building blocks of a graph.

Examples: A process flow starts with parallel steps. The last step of a process flow can have a loop.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.1.3 GID-2666565 Group of Building Blocks Representation (SR3146.9.1.7)

A building block used as phase or operation group is recognizable as such in the graph and can be selected as one element.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.4 GID-2666566 Navigation (SR3146.9.1.2)

The following navigation and correction tools are available:

- Zoom
 - Map (bird eye)
 - Explorer
 - Pan current graph
 - Hierarchical navigation
 - Horizontal navigation (within one master recipe, master workflow, or custom building block)
 - Undo last graph-related user actions (independent of the current Graph Window).
 - Redo actions revoked by the **Undo** function.
- Zoom - Support of zoom in, zoom out, zoom to fit, and 100% of current graph.
 - Map - Displays the current building block and its superordinate building blocks in three views and enables the navigation through the master recipe or master workflow. The view of the current Graph Window is highlighted. The Map applies to procedure level, unit procedure level, and operation level.
 - Explorer - Displays a structural overview of the graph and enables the navigation through the master recipe, master workflow, or building block.
A corresponding marker indicates that a graph element is based on a source cBB in the **Verification or Approved (SR3146.10.1)** statuses ([GID-2666044](#)).
 - Hierarchical navigation - Go up to superordinate procedural level and go back to previous procedural level.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.5 GID-2666567 Context Menus (SR3146.9.1.3)

Context menus enhance the usability during the creation and maintenance of procedural elements of the **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)).

Context menus are available for tab titles of the **Graph Window (SR3146.9.2.1)** UI element ([GID-2666570](#)), the work area of the Graph Window, the building block images ([GID-2666563](#)), the **Graph Clipboard (SR3146.9.1.6.3)** table ([GID-2667581](#)) of the Setlist, and the **Material Flow Control (SR3146.9.8)** tab ([GID-2666037](#)).

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.6 Copy & Paste Function (SR3146.9.1.6+)

When you design the SFC graphs of recipes, workflows, or building blocks in the Graph Window of Recipe Designer or Workflow Designer, the system supports you with a copy and paste function. It allows you to copy a building block (phase, phase group, operation, operation group, unit procedure, or procedure) and paste it at another location in the current graph or into any other graph on the same structure level. The configuration of the building block is fully retained with all defined parameters and sub-graphs.

9.1.6.1 GID-2667578 COPY A BUILDING BLOCK (SR3146.9.1.6.1)

A selected building block in the Graph Window can be copied to the Graph Clipboard.

The system copies the selected building block including its defined parameters and sub-graphs. A building block is copied in its current state, even with unsaved changes.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.6.2 GID-2667579 COPY SEVERAL BUILDING BLOCKS (SR3146.9.1.6.4)

Several selected building blocks (phase, phase group, operation, operation group) in the Graph Window can be copied to the Graph Clipboard. Such selected building blocks must fulfill together the **Checks that Apply to Group Modeling** checks set ([GID-2666488](#)) and the following further rules.

- All selected building blocks must be connected to each other.
- All selected building blocks must be elements of one group or complete group(s) or only non-group elements or complete group(s) and non-group elements.
- Branches must be selected completely with a building block before as start and a building block after as end element.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

The system copies the selected building blocks including their defined parameters and sub-graphs. A building block is copied in its current state, even with unsaved changes.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.6.3 GID-2667580 PASTE A BUILDING BLOCK (SR3146.9.1.6.2)

A building block or building block group that is available in the graph clipboard can be pasted into the current Graph Window tab if its structure level matches.

Adding a building block (group) as an unconnected component to the graph shall be possible.

Adding a building block (group) at a specific position in the graph shall be possible with the Graph Clipboard of the Setlist. When using the Setlist, the insertion rule of the building block can be specified.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.6.4 GID-2667581 SETLIST - GRAPH CLIPBOARD (SR3146.9.1.6.3)

The Graph Clipboard makes copied building blocks available to add them together with the Setlist toolbar. A copied building block is listed with

- its identifier (in case of a group or several building blocks, the identifier of the first building block),
- its structure level (+ **group** in case of a group or several building blocks),
- the time when it was copied, and
- a description (initially empty).

The Graph Clipboard table is sorted by the copy time, so the last copied building blocks are always at the top. To be able to differentiate between building blocks that may have the same identifier, a description of up to 80 characters can be defined.

Recipe Designer and Workflow Designer use a common Graph Clipboard. It shall allow to copy an element in one designer and paste it into the other designer.

The Graph Clipboard is cleared when you log off from Recipe and Workflow Designer.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.6.5 GID-2667582 GRAPH CLIPBOARD CONTEXT MENU (SR3146.9.1.6.3.1)

For a selected building block, the context menu shall offer the possibility to

- rename the identifier,
- edit the description,
- remove it from the Graph Clipboard,
- remove all other building blocks from the Graph Clipboard.

Additionally, the context menu allows to clear the entire Graph Clipboard.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.1.7 GID-2666569 Docking (SR3146.9.1.4)

The docking configuration is available as a default layout and a user-specific layout.

In the default docking configuration, the windows are arranged as follows:

- To the left of the Graph Window: **Map** (SR3146.9.1.2) tool ([GID-2666566](#)) and **Explorer** (SR3146.9.1.2) tool ([GID-2666566](#)).
- To the right of the Graph Window: **Setlist** (SR3146.9.2.9) UI element ([GID-2666573](#)) and **property windows** (SR3146.9.2.12 ([GID-2667603](#)), SR3146.9.2.13 ([GID-2667604](#)), SR3146.9.2.15 ([GID-2667602](#))).
- At the bottom of the Graph Window: **Phase Preview** (SR3146.9.2.11) UI element ([GID-2666578](#)), **Messages** (SR3146.9.2.16+) window ([GID-2666576](#)), **Comparison** (SR3146.9.2.19+) window ([GID-2666577](#)).

The following functions are available to maintain the docking configuration:

- Undo last layout changes related to the dockable windows.
- Redo last layout changes related to the dockable windows.
- Save the window layout (user-specific).
- Load the last saved window layout (user-specific).
- Reset the window layout to the default layout.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.1.8 *GID-3093192 Tooltips (SR3146.9.1.5)*

Tooltips are available for the following objects:

- transitions ([GID-2666454](#)),
- parameter buttons in the building block images ([GID-2666563](#)), and
- **MFC graph (SR3146.9.8.1)** components ([GID-2666473](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Low
MES-Compliance: 21 CFR Part 11 relevance	No

9.2 Workbench UI Elements (SR3146.9.2+)

The graphical Designer workbench provides several UI elements (e.g. Library Universe, Messages window, Parameter Panel).

9.2.1 *GID-2666570 Work Area (SR3146.9.2.1)*

The work area panel consists of the Graph Window.

- The Graph Window can display more than one building block of a master recipe, master workflow, custom building block, or change request, each in a separate tab (subordinate tab).
- Subordinate tabs can be closed separately.
Does not apply to change requests.
- The tab title of subordinate tabs displays the custom building block identifiers.
Does not apply to change requests.
- An asterisk in the upper tab title is the indicator for unsaved master recipes, master workflows, custom building blocks, or change requests.
- An R in the upper tab title is the indicator for read-only master recipes, master workflows, custom building blocks, or change requests.
- All tabs can be closed one at a time except for the current master recipe, master workflow, custom building block, or change request.
- The graph and its components can be arranged automatically in order to center sequences and branches with respect to their start components and to optimize the vertical spacing between individual components.
- The graph can be compacted automatically for optimal use of space.
- Grid lines can be shown or hidden.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.2 Open Dialog (SR3146.9.2.20+)

The Open dialog is related to **Master recipe** (SR3146.9.10.1) objects ([GID-2666467](#)), **Master workflow** (SR3146.9.10.9) objects ([GID-2666468](#)), **Custom building block** (SR3146.9.10.7) objects ([GID-2666043](#)), and **Change request** (SR3146.12+) objects ([GID-2666053](#)), and system building blocks. It allows to select data records for opening in a resizable dialog. It provides an intelligent filter and search function.

- A quick search function applies to the search result and reduces the result according to the filter criteria.
- A filter provides various hierarchy levels. The selection of an item on a hierarchy level reduces the subsequent search results.
- The search result is available via a separate table.

9.2.2.1 GID-2667583 OPEN DIALOG - HIDE OBJECTS (SR3146.9.2.20.2)

By default, master recipes and master workflows in a **Retired** status (e.g. **Archived**, **Obsolete**) and procedural elements in the **Archived** status are excluded from the search result.

The inclusion of master recipes and master workflows in a **Retired** status and the inclusion of procedural elements in the **Archived** status can be switched on.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.2.2 GID-2667584 OPEN DIALOG - MISSING REFERENCED OBJECT (SR3146.9.2.20.3)

As long as an object is in an editable status, objects it references from its parameters can be deleted, e.g. an equipment requirement references an equipment class that is deleted.

Nevertheless, it shall still be possible to open the object in the editable status. Missing references are automatically removed and an information message is displayed in this regard.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.2.3 GID-2667585 OPEN DIALOG FOR PROTECTED OBJECTS (SR3146.9.2.20.1)

For objects that are protected by an access privilege: The system shall only provide objects for selection whose access privilege matches the access privilege of the logged-in user.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.3 Library Universe (SR3146.9.2.4+)

The Universe works as a library and allows to select data records for further processing in a resizable dialog.

The same library style is used for the following actions:

- Select a material (SR3146.9.2.4.5) data record ([GID-2667588](#)) during the creation of a new master recipe.
- Select a material (ERP BOM) (SR3146.9.2.4.2) data record ([GID-2667589](#)) during the creation of a new master recipe.
- Open a master recipe, master workflow, or custom building block by means of the Open (SR3146.9.2.20+) dialog ([GID-2666571](#)).

9.2.3.1 GID-2667586 LIBRARY FILTER & SEARCH (SR3146.9.2.4.3)

The Universe provides an intelligent filter and search function.

- A quick search function applies to the search result and reduces the result according to the filter criteria.
- A filter provides various hierarchy levels. The selection of an item on a hierarchy level reduces the subsequent search results.
- The search result is available via a separate table.
- Each item of the search result can be flagged as Setlist item in order to be available in the Setlist (SR3146.9.2.9) UI element ([GID-2666573](#)).

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.2 GID-2667587 LIBRARY FOR BUILDING BLOCKS (SR3146.9.2.4.4)

The Universe provides building block-specific libraries to select procedures, unit procedures, operations, and phases.

For building block objects that are protected by an access privilege: The system shall only provide building block objects whose access privilege matches the access privilege of the logged-in user.

The library for building blocks on the operation and unit procedure levels allows to apply a filter on the **Usage as group** attribute.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.3 GID-2667588 LIBRARY FOR MATERIALS (SR3146.9.2.4.5)

The Universe provides a material-specific library to select corresponding data records. The list of materials can be filtered per material type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.4 GID-2667589 LIBRARY FOR MATERIALS (ERP BOM) (SR3146.9.2.4.2)

Does not apply to Workflow Designer.

The workbench provides a material (ERP BOM)-specific library to select a product material for which an ERP BOM exists.

The library is only available during recipe creation in order to assign the product material to the recipe.

- For ERP BOMs that are protected by an access privilege: The system shall only allow to select product materials whose access privilege matches the access privilege of the logged-in user. The access privilege of the ERP BOM is passed on to the master recipe. In the default configuration, the access privilege cannot be changed.
- For ERP BOMs that are not protected by an access privilege: The system shall allow to select an access privilege for the protection of the master recipe from unauthorized access for users with access privileges that allow to maintain protected recipes. The list of available access privileges shall be restricted to the access privileges of the logged-in user.

The library is not available in the **Universe (SR3146.9.2.4+)** UI element ([GID-2666572](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.5 GID-2667590 LIBRARY FOR WORK CENTERS (SR3146.9.2.4.1)

The Universe provides a work center-specific library to select corresponding data records.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.3.6 GID-2667591 LIBRARY FOR STATIONS (SR3146.9.2.4.9)

The Universe provides a station-specific library to select corresponding data records.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.7 GID-2667592 LIBRARY FOR EQUIPMENT CLASSES (SR3146.9.2.4.7)

The Universe provides an equipment class-specific library to select corresponding data records. The list of equipment classes can be filtered per equipment class level.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.8 GID-2667593 LIBRARY FOR PROPERTY TYPES (SR3146.9.2.4.8)

The Universe provides a property type-specific library to select corresponding data records. The list of property types can be filtered per data type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.3.9 GID-2667594 LIBRARY FOR SIGNATURE PRIVILEGES (SR3146.9.2.4.6)

The Universe provides a signature privilege-specific library to select corresponding data records.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

9.2.4 GID-2666573 Setlist (SR3146.9.2.9)

A Setlist provides pre-selected data records for building master recipes, master workflows, custom building blocks, and change requests.

- The data records (e.g. material, building blocks) are pre-selected in the **Universe (SR3146.9.2.4+)** UI element ([GID-2666572](#)).
- Capabilities are provided by the system.
- The Setlist is easily accessible during recipe, workflow, custom BB, and change requests building.

- Setlist items are added to the respective section of the recipe, workflow, and custom BB with a mouse click.
- BBs are added to a change request with a mouse click.
- ERP BOM items are only available within Recipe Designer.

The Setlist provides functions for

- building sequences, selection branches, simultaneous branches, and joining elements according to the **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)),
- inverting the default inserting direction,
- (smart) replacing (system) phases, operations, unit procedure, procedures,
- assigning materials and ERP BOM items as **process input (SR3146.9.5.1)** parameters ([GID-2667346](#)) and **process output (SR3146.9.6.1)** parameters ([GID-2667373](#)) to phases,
- assigning **work center (SR3146.9.5.4)** parameters ([GID-2667350](#)) to unit procedures,
- assigning **station (SR3146.9.5.8)** parameters ([GID-2667352](#)) to operations,
- assigning **equipment requirement (class) (SR3146.9.5.5)** parameters ([GID-2667354](#)) as process input to phases,
- assigning **signature privilege (SR3146.9.5.3)** parameters ([GID-2667348](#)) as process inputs to phases, and
- assigning **capability (SR3146.9.5.9)** parameters ([GID-2667362](#)) as process inputs to operations or unit procedures.

ERP BOM items are only available for master recipes based on an ERP BOM; in the **ERP BOM Item (SR3146.9.2.9.1)** section ([GID-2667595](#)) of the Setlist.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.4.1 GID-2667595 SETLIST - ERP BOM ITEM (SR3146.9.2.9.1)

Does not apply to Workflow Designer.

The **ERP BOM Item** section is filled automatically with BOM items (and their common attributes) of the ERP BOM on which a master recipe is based.

When an ERP BOM item is assigned to a recipe/building block element, the material data and common BOM item attributes are populated into the corresponding material input parameter.

Common attributes are position, material identifier and short description, quantity with UoM, and fixed quantity.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.4.2 GID-2667596 SETLIST - WORKFLOW-RELATED CONSISTENCY CHECKS (SR3146.9.2.9.2)

In Workflow Designer, the Setlist can hold custom building blocks that are not conform to the required master workflow structure.

- If the conflict cannot be solved within the master workflow, the system does not allow to add the custom building block to a master workflow (e.g.: a custom procedure holds more than one unit procedure).
- If the conflict can be solved within the master workflow, the system allows to add the custom building block to the master workflow and displays a corresponding error message in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#)) (e.g. a custom operation holds a phase that is not marked for usage within a workflow).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.4.3 GID-2667597 SETLIST - WORKFLOW-RELATED DATA ADJUSTMENT (SR3146.9.2.9.3)

In Workflow Designer, the Setlist can hold custom building blocks with recipe-related attribute definitions. This applies to:

- **Dispense** attribute for operations/unit procedures (**SR3146.9.4.4** operation type ([GID-2666458](#))).

If a custom building block is added to a master workflow, the recipe-related attribute definitions are ignored and removed. (They bear no meaning for workflows and cannot be edited in the context of a workflow.)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.4.4 GID-2667598 SETLIST - GROUP OF BUILDING BLOCKS (SR3146.9.2.9.4)

Operations and unit procedures can be used as a groups of building blocks if their group usage attribute is set to **Allowed** or **Mandatory**. For ease of use of such elements, separated sections are available in the Setlist:

- Operation Group
- Phase Group

If a unit procedure with the group usage attribute **Allowed** is added to the Setlist, the unit procedure is added to both the **Unit Procedure** and **Operation Group** sections.

If a unit procedure with the group usage attribute **Mandatory** is added to the Setlist, the unit procedure is added to the **Operation Group** section only.

If a unit procedure with the group usage attribute **Not allowed** is added to the Setlist, the unit

procedure is added to the **Unit Procedure** section only.

If an operation with the group usage attribute **Allowed** is added to the Setlist, the operation is added to both the **Operation** and **Phase Group** sections.

If an operation with the group usage attribute **Mandatory** is added to the Setlist, the operation is added to the **Phase Group** section only

If an operation with the group usage attribute **Not allowed** is added to the Setlist, the operation is added to the **Operation** section only.

If the group usage attribute of an operation or unit procedure is changed and it has already been added to the Setlist before, the sections are updated accordingly.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.5 *GID-2666574 Parameter Panel (SR3146.9.2.7)*

A Parameter Panel allows to maintain existing parameters, transitions (with an identifier), and their attributes.

- If applicable, parameters can be deleted.
- Parameters and transitions can be locked and unlocked.
 - Locking of parameters (SR3146.9.13+) feature [\(GID-2792501\)](#)
 - Locking of transitions (SR3146.9.14+) feature [\(GID-2792502\)](#)
- The **Lock** attribute provides the following information:
 - Frozen: source cBB is in the **Verification** or **Approved** statuses.
 - Locked: parameter/transition is locked.
 - Unlocked: parameter/transition is unlocked.
- Allows to filter per parameter type (e.g. process parameter, material parameter, transition).
- The Parameter Panel is resizable.
- Applies to material parameters:
 - In its vertical pane, the Parameter Panel displays each attribute of a parameter
 - In its horizontal pane, the Parameter Panel displays only the **Basic** attributes of a parameter.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Default attributes for each parameter are:

- Lock
- Hierarchy level
- Path

Parameters and transitions (with identifiers) are accessible via buttons on the building block images ([GID-2666563](#)).

Cell editors facilitate easy editing of values: Measured Value editor ([GID-2667630](#)), Multi-line text editor ([GID-2667631](#)), Expression editor (SR3146.9.9.4) UI element ([GID-2666579](#)), Date/Time Picker (SR3146.9.2.17.1) editor ([GID-2667632](#)), Duration (SR3146.9.2.17.2) editor ([GID-2667633](#)), Packaging Level Data (SR3146.9.2.17.3) editor ([GID-2667634](#)), Work Instruction Selection editor link and further editors ([GID-2667637](#)).

Materials, signature privileges, work center parameters, equipment requirement parameters, property types, capabilities, and dynamically created process parameters can be deleted as long as they are not locked by means of the Lock (SR3146.9.13+) attribute ([GID-2792501](#)).

Applies to material parameters:

The vertical pane of the Parameter Panel is collapsible.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.5.1 GID-2667599 PARAMETER PANEL - VIEW ALL (SR3146.9.2.7.1)

The Parameter Panel can be accessed from all levels of the S88 building blocks. The visible parameters include all of the local parameters of the building block below the current building block level (view all per building block).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.5.2 GID-2667600 PARAMETER PANEL - SPECIFIC PROPERTY TYPES (SR3146.9.2.7.2)

Process input parameters can be refined by adding one or more parameter-specific property types and, if applicable, by defining a specific content for each property type.

This capability applies to equipment requirement parameters.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.5.3 GID-2667601 PARAMETER PANEL FILTER & SEARCH (SR3146.9.2.8)

The Parameter Panel provides an intelligent filter and search function.

- A quick search function applies to the search result and reduces the result according to the filter criteria.
- A filter provides various hierarchy levels. The selection of an item on a hierarchy level reduces the subsequent search results.
- The search result is available via a separate table.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.6 Property Windows

The workbench provides property windows specific to master recipe, master workflow, building block, and change request components.

Cell editors facilitate easy editing of values: Measured Value editor ([GID-2667630](#)), Multi-line text editor ([GID-2667631](#)), and Packaging Level Data (SR3146.9.2.17.3) editor ([GID-2667634](#)).

9.2.6.1 GID-2667602 PROPERTY WINDOW - HEADER (SR3146.9.2.15)

Provides the properties of the header component (master recipe, master workflow, custom building block, change request).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.6.2 GID-2667603 PROPERTY WINDOW - ELEMENT (SR3146.9.2.12)

Provides the properties of the element component within a master recipe, master workflow, or custom building block.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.6.3 GID-2667604 PROPERTY WINDOW - SOURCE BB (SR3146.9.2.13)

Provides the properties of the source system/custom/group building block that was used as a template. This applies to the usage of a BB as a master recipe, master workflow, or building block element, "Save as" of a BB, and "Create BB from selected".

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.7 Messages (SR3146.9.2.16+)

The **Messages** window displays messages of various categories related to the current master recipe, master workflow, or building block. They result from checks performed by the Designer workbench when master recipes, master workflows, or building blocks are being edited or imported.

9.2.7.1 USER INTERFACE OF THE MESSAGES WINDOW

The tool panel displays the number of messages per message category and a breadcrumb trail that indicates the path to the element that is currently selected in the tree panel.

The tree panel displays a structural overview with all nodes of the master recipe, master workflow, or building block for which the checks have found messages. Navigating the tree highlights messages in the list panel and updates the breadcrumb trail.

The list panel displays a list of all messages that have been found for the master recipe, master workflow, or building block. Messages are prepended by unique message/message category identifiers.

Navigating the list highlights nodes in the tree panel, updates the breadcrumb trail, can select affected elements in the Graph Window, can select affected parameters in the Parameter Panel, can select the Material Flow Control tab, can select affected properties in the property windows, and can select expressions in the Expression editor of affected transitions, process parameter attributes, equipment requirement rules, if applicable.

The message category is indicated by an icon in the tool and the list panel.

The tab title also contains the number of messages per message category.

9.2.7.2 GID-2667606 MESSAGES - VALIDATOR-RELATED (SR3146.9.2.16.1)

The messages are related to an ongoing validation (consistency checks) of the procedural structure and its parameters. The following message categories are supported:

- Error
Errors need to be resolved for approved custom building blocks and valid master recipes or master workflows.
- Warning
Warnings need to be resolved for valid master recipes or master workflows.
- Information
Validator result that does not require to be resolved.

For consistency check-related messages, see "Validator Consistency Checks (SR3146.9.4.3+)" ([GID-2666040](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.7.3 GID-2667607 MESSAGES - CATEGORY FILTER (SR3146.9.2.16.2)

The display of messages can be filtered by message category.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.7.4 GID-2667608 MESSAGES - NAVIGATION (SR3146.9.2.16.3)

The structural overview in the tree panel allows the navigation based on the tree structure of the master recipe, master workflow, or building block.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.7.5 GID-2667609 MESSAGES - RESOLVE ISSUE (SR3146.9.2.16.4)

For messages caused by inconsistencies that can be resolved automatically, the system provides the **Resolve issue** functions in the context menu of the related message to resolve the selected issue, to resolve all issues of the same message category identifier, or to resolve all issues.

The system allows to resolve a single issue or all issues at once.

The **Resolve issue** function is available for the following checks and warnings:

- **Validator - Phase parameter - ERP BOM attribute discrepancy (SR3146.9.4.3.56)** check ([GID-2667456](#))
- **Validator - Recipe - Planned quantity does not fit ERP BOM (SR3146.9.4.3.57)** check ([GID-2667449](#))
- **Validator - Recipe - Packaging Level Does Not Fit ERP BOM (SR3146.9.4.3.58)** check ([GID-2667451](#))
- **Validator - Material Parameter - Packaging Level Does Not Fit Material's Master Data (SR3146.9.4.3.109)** check ([GID-2667482](#))
- **Validator - Transition condition - Broken link - Error (SR3146.9.4.3.37.2)** check ([GID-2667421](#))
- **Validator - Phase parameter - Broken link - Error (SR3146.9.4.3.25.2)** check ([GID-2667426](#))
- **Validator - Equipment requirement rule Broken link - Error (SR3146.9.4.3.90.2)** check ([GID-2667533](#))
- **Import Consistency Check Messages (SR1075.1.3.5.5+)** warnings ([GID-2666603](#))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.8 Comparison (SR3146.9.2.19+)

The **Comparison** window displays the result of a comparison of the current master recipe, master workflow, or custom building block with the comparison baseline. See also "Comparing Master Recipes, Master Workflows, and Custom Building Blocks (SR3146.15+)" ([GID-2666049](#)).

9.2.8.1 USER INTERFACE OF THE COMPARISON WINDOW

The tool panel displays the number of differences per difference category, an option list to define the objects whose differences are displayed, and a breadcrumb trail that indicates the path to the element that is currently selected in the tree panel.

The tree panel displays a structural overview with all nodes of the master recipe, master workflow, or custom building block for which the comparison has found differences. Navigating the tree highlights entries in the list panel and updates the breadcrumb trail.

The list panel displays a list of all differences that have been found for the master recipe, master workflow, or custom building block.

Navigating the list highlights nodes in the tree panel, updates the breadcrumb trail, can select affected elements in the Graph Window, can select affected parameters in the Parameter Panel, can select the Material Flow Control tab, can select affected properties in the property windows, and can select expressions in the Expression editor of affected transitions, process parameter attributes, equipment requirement rules, if applicable.

The difference category is indicated by an icon in the tool and the list panel.

The tab title also contains the number of differences per difference category.

Removed objects are displayed last under their parent nodes.

9.2.8.2 GID-2667611 COMPARISON - DIFFERENCE CATEGORIES (SR3146.9.2.19.1)

The following difference categories are supported:

- **Added**
A parameter, parameter's child node (e.g. action of a capability), or procedural element has been added.
- **Changed**
An attribute, parameter, parameter's child node, procedural element, MFC-related setting, or the layout has been changed.
- **Removed**
A parameter, parameter's child node, or procedural element has been removed.

For the difference-specific handling, see "Comparison Algorithm (SR3146.15.1+)" ([GID-2666050](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.8.3 GID-2667612 COMPARISON - CATEGORY FILTER (SR3146.9.2.19.2)

The display of differences can be filtered by difference category.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.8.4 GID-2667613 COMPARISON - TYPE FILTER (SR3146.9.2.19.3)

The display of messages can be filtered by type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.8.5 GID-2667614 COMPARISON - NAVIGATION (SR3146.9.2.19.4)

The structural overview in the tree panel allows the navigation based on the tree structure of the master recipe, master workflow, or custom building block.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.8.6 GID-2667615 COMPARISON - DIFFERENCE-SPECIFIC INFORMATION (SR3146.9.2.19.5)

The following difference-specific information is available:

- Type
- Identifier
- Predecessor
- Successor
- Attribute
- New value
- Old value

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.9 GID-2666578 Preview Panel (SR3146.9.2.11)

The Preview panel consists of the Phase Preview which displays how the selected phase will be rendered when executed.

If the required information or input is not available yet, the preview shows a corresponding system message.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.9.1 GID-2667616 DEFAULT PREVIEW BUILDTIME (SR3146.9.9.4.1)

If a phase returns a preview-related error, the preview of the phase in the **Preview Panel (SR3146.9.2.11)** UI element ([GID-2666578](#)) is replaced by a default preview.

Example: Input parameters are not available.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10 GID-2666579 Expression Editor (SR3146.9.9.4)

The Expression editor supports:

- References to output variables (e.g. used for information flow between phases and operations)
- References to attributes of equipment properties (e.g. used for definition of equipment-related rules)
- Operators (see SR3146.9.9.4.4 ([GID-2667621](#)))
- Functions (see SR3146.9.9.4.9 ([GID-2667627](#)), SR3146.9.9.4.7 ([GID-2667623](#)), SR3146.9.9.4.11 ([GID-2666579](#)), and SR3146.9.9.6 ([GID-2667625](#)))

The editor is available for **process parameter (SR3146.9.7+)** data ([GID-2792500](#)), **rule (SR3146.9.5.7)** definitions ([GID-2667358](#)), and **transition condition (SR3146.9.4.2)** definitions ([GID-2666456](#)).

Intelligent auto-completion feature supports the selection of expression components.

The list of available expression elements displays indicators for specific elements with details as tooltip (e.g. parallel elements, event-triggered elements, successor elements).

Transition identifier of an expression is displayed within the transition in the Graph Window and as part of the respective tooltip.

Rule identifier of an expression is displayed within the process input requirement identifier.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Textual description of an expression is displayed as value in the parameter panel and as part of the tooltip for the transition in the Graph Window, respectively.

Concurrent syntax and semantics validation supports the definition of expressions and references.

Level indicators are supported in the Expression editor for the references of unit procedures (UP:), operations (OP:), and phases (PH:) procedural elements.

Output references consist at least of a procedural element identifier and an output identifier. For references across higher level procedural elements, their identifiers are also components of the output reference.

Blanks, tabs, and line breaks can be used for better readability.

Round brackets can be used to override or clarify an operators' precedence.

Single-line and multi-line comments can be added.

Indicators for errors (red underline of expression, error icon at affected line, global error status marker, error message as tooltip).

Code folding is supported to enable a clear structuring of large expressions (except for Pnnts ([SR3146.9.9.4.6](#)) scripting ([GID-2667628](#))).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.1 GID-2667617 EXPRESSIONS FOR TRANSITIONS (SR3146.9.9.4.2)

Conditions within a transition can be defined with the Expression editor.

In case a condition or a description is defined, the definition of a transition identifier is mandatory. Transition identifiers are generated by PharmaSuite and can be edited by the recipe or workflow author. They must be unique within their procedural element of the **procedural structure (SR3146.9.4)** hierarchy ([GID-2666035](#)).

For transitions that only hold the default condition, identifiers are optional.

User-defined transition conditions apply in addition to the default condition of the **transition (SR3146.9.4.2) condition** ([GID-2666456](#)).

The expression result must be of the **Boolean** type.

- Default attributes for each transition are:
- Identifier
- **Lock (SR3146.9.14+)** attribute ([GID-2792502](#))
- Description
- Expression

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.2 GID-2667618 EXPRESSIONS FOR PROCESS PARAMETERS (SR3146.9.9.4.3)

Process parameters can be defined with the Expression editor.

An editor-specific icon indicates the editor's availability.
The data type of the expression result must match the attribute's data type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.3 GID-2667619 EXPRESSIONS FOR FLEXIBLE RULES (SR3146.9.9.4.10)

Flexible rules within a process input requirement can be defined with the Expression editor.

In case a flexible rule is added to a process input requirement, the definition of a rule identifier is mandatory. Rule identifiers are generated by PharmaSuite and can be edited by the recipe or workflow author. They must be unique within their phase.

The expression result must be of the **Boolean** type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.4 GID-2667620 EXPRESSIONS FOR CONDITIONAL RULES (SR3146.9.9.4.12)

Conditional rules within a process input requirement can be defined with the Expression editor.

They are group-enabled, i.e. per default they apply as an equipment requirement to the identified parent entity and each of its child entities.

The Expression editor supports the following keywords to define a conditional rule:

- **provided that** allows to define conditions that must be fulfilled and
- **require** allows to define the checks themselves.

If the condition of the **provided that** section is not fulfilled for at least one entity of the group, the conditional rule fails.

In case a conditional rule is added to a process input requirement, the definition of a rule identifier is mandatory. Rule identifiers are generated by PharmaSuite and can be edited by the recipe or workflow author. They must be unique within their phase.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

The expression result must be of the **Boolean** type.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.5 GID-2667621 EXPRESSION EDITOR OPERATIONS (SR3146.9.9.4.4)

The Operators tree panel provides the following operators:

- Arithmetic operators: +, -, *, /
- Comparison operators: ==, !=, <, <=, >, >=
- Logical operators: AND, OR, NOT
- Unary arithmetic operators: +, -
- String concatenation: +

A special handling applies to the Date and Duration data types:

- Date - Date = Duration
- Date (+, -) Duration = Date
- Duration (*, /) Scalar = Duration

A special handling applies to the Measured value (MV) data type:

- MV (*, /) Scalar = MV
- MV (+, -) MV = MV
- MV (/) MV = Scalar.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.6 GID-2667622 EXPRESSION EDITOR LITERALS (SR3146.9.9.4.5)

The following literals are supported:

- Long - integral numbers: e.g. 12345
- Float - floating point numbers (fractional numbers): e.g. 123.45Float
- BigDecimal - floating point numbers (fractional and integral numbers) with greater precision than Float: e.g. 123.45 or 123BDecimal or 12.3e42
- Boolean: true, false
- String: e.g. "This is a string."

- Date and time: e.g. 07/19/2012 9:20:00 AM CEST
- Duration: e.g. 23d1h44min3s
- Measured value: e.g. 23kg

Additional literals:

- IMESS88Equipment: equipment data object
- PhaseDataReference collected phase data

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.7 GID-2667623 EXPRESSION EDITOR FUNCTIONS (SR3146.9.9.4.7)

The Functions tree panel provides the following functions:

- Current Date and Time function: now()
 - Convert to Unitless Number function: convertTo(arg1, arg2)
 - Convert to BigDecimal function: convertToBigDecimal(arg1)
 - Convert to Long function: convertToLong(arg1, arg2)
 - Convert to MeasuredValue function: convertToMeasuredValue(arg1, [arg2])
Use this function for units of measure that cannot be interpreted correctly due to the usage of special characters (e.g. °C or IU/ml).
 - Convert to String for Display function: convertToString(arg1)
 - Convert for Date Only Use: convertForDateOnlyUse(arg1)
Use this function to convert a timestamp for use as date only (time set to midnight).
 - String Contains function: containsItem(arg1, arg2, [arg3])
 - Average function: average(arg1, arg2, ...)
 - Minimum function: min(arg1, arg2, ...)
 - Maximum function: max(arg1, arg2, ...)
- Null-handling functions: see SR3146.9.9.4.9 ([GID-2667627](#))
 - Phase-specific functions: see SR3146.9.9.4.11 ([GID-2667624](#))
 - Runtime context data functions: see SR3146.9.9.6 ([GID-2667625](#))
 - Average function is only supported by Numeric data types.

-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.8 GID-2667624 EXPRESSION EDITOR - PHASE-SPECIFIC FUNCTIONS (SR3146.9.9.4.11)

The Functions tree panel provides the following function only if it is supported in the context of the specific phase (e.g. **Identify equipment** phase (SR0300+)):

- Reference to the currently identified equipment: currentEquipmentEntity
(equipment context free)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.9 GID-2667625 EXPRESSION EDITOR - RUNTIME CONTEXT DATA (SR3146.9.9.6)

The Functions tree panel provides the following functions related to runtime context data:

- General context

Create Workflow ID to generate a unique workflow identifier: createWorkflowId(arg1) with the prefix to use as argument.

Get Context Data Value to retrieve the context value for a key.

The context is written by the phase **Write context data** phase: getContextValue(arg1, arg2, arg3)

- with the data type of the value to retrieve as first argument,
- with the key of the value to retrieve as second argument,
- with the context ID of the value to retrieve as optional third argument.
If it is not provided the current order/workflow ID is used.

Does not apply to Recipe Designer

- Workflow Is Appended to Order to check if the current workflow is appended to any order: workflowIsAppendedToOrder()

- Order context

Order/Workflow ID function: orderId

Does not apply to Workflow Designer.

- Order Scaling Factor function: orderScalingFactor
- Produced Material ID function: producedMaterialId
- Produced Material Short Description function: producedMaterialShortDescription

- Produced Material Type function: producedMaterialType
- Batch ID function: batchId
- Batch Status function: batchStatus

MFC position context

The functions of the MFC position context are only supported for Dispense, Inline Weighing, and Output Weighing; they are not supported by the Material Tracking phases (**Identify material**, **Produce material**, **Account material**).

- Material ID function: materialId
- Material Short Description function: materialShortDescription
- Material Type function: materialType
- Status function: mfcPositionStatus
- Planned Quantity - Original function: originalPlannedQuantity
- Planned Quantity - Execution function: plannedQuantity
- Actual Quantity - Last split function: actualSplitQuantity
Returns the actual recorded quantity of all the last split positions that constituted the last target of a material input position. For material outputs, the function always returns null.
- Actual Quantity - Total function: totalActualQuantity
Returns the total recorded quantity of a material position minus replaced quantity or quantity that was declared as waste.
- Sum of Actual Input Quantities - Total function: sumTotalActualInputQuantity
Returns the total recorded quantity of all material input positions of the unit procedure or the specified material input positions of the procedure.
- Prorate Factor function: prorateFactor
Does not apply to Workflow Designer.
- Yield function: yield
Does not apply to Workflow Designer.
- Production Date - Last Identified Sublot function: productionDateOfSublot
Returns the production date of the last identified subplot of a material input position. In case no subplot has been identified or for material outputs, the function always returns null.
- Equipment context
 - Equipment Is Bound to a unit procedure: equipmentIsBound(arg1)
with an equipment identifier as argument.
 - Current equipment entity (runtime-related) function: currentEquipmentEntity
 - Equipment ID to retrieve the identifier of an equipment entity: equipmentId(arg1)
with an equipment object as argument.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

Equipment is member of class function: equipmentIsMemberOfClass(arg1, arg2)

With an equipment object as first argument and an equipment class identifier as second argument.

Equipment property attribute (runtime-related) function: equipmentPropertyAttribute(arg1, arg2 [, arg3, arg4])

With an equipment object as first argument, a property type identifier as second argument, a property type attribute identifier as optional third argument, and an index as optional fourth argument.

Equipment has property attribute function: equipmentHasPropertyAttribute(arg1, arg2 [, arg3, arg4])

With an equipment object as first argument, a property type identifier as second argument, a property type attribute identifier as optional third argument, and an index as optional fourth argument.

Equipment graph status (runtime-related) function: equipmentGraphStatus(arg1, arg2 [, arg3])

With an equipment object as first argument, a graph purpose as second argument, and an attribute identifier (KEY or DISPLAY) as optional third argument.

Equipment has graph function: equipmentHasGraph(arg1, arg2)

With an equipment object as first argument and a graph purpose as second argument.

Equipment graph expiry date (runtime-related) function: equipmentGraphExpiryDate(arg1, arg2)

With an equipment object as first argument and a graph purpose as second argument.

Equipment FSM status function: equipmentFSMStatus(arg1, arg2 [, arg3])

With an equipment object as first argument, the identifier of a FlexibleStateModel property type as second argument, and as optional third argument either the "KEY" string or the "DISPLAY" string.

Date and time of last equipment status change (logbook-related) function:

lastEqTransitionTimestamp(arg1, arg2, arg3[, arg4])

With an equipment object as first argument, the identifier of a FlexibleStateModel property type as second argument, the non-localized state name or the localized status of the entity as third argument, and as optional fourth argument either the "KEY" string or the "DISPLAY" string.

Last product ID (logbook-related) function: lastProduct

- Location context

Work Center ID function: workCenterId

Work Center Description function: workCenterDescription

Station ID function: stationId

Room ID function: roomId

Room Status function: roomStatus

Storage Area ID function: storageAreaId

Storage Area Description function: storageAreaDescription

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.10 GID-2667626 EXPRESSION EDITOR - IMPLICIT NULL HANDLING (SR3146.9.9.4.8)

The Expression editor implicitly handles NULL markers according to the SQL standard. This leads to the following behavior for expressions including NULL:

- Mathematical expressions result in NULL
Example: $3 + \text{NULL} = \text{NULL}$
- Aggregation functions eliminate NULL
Example: $\text{MIN}(3,\text{NULL},5) = 3$
- Comparative expressions result in NULL
Example: $4 > \text{NULL}$ results in NULL
- Boolean expressions follow the Three-valued logic (3VL).

For transitions, NULL is mapped to FALSE.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.11 GID-2667627 EXPRESSION EDITOR - EXPLICIT NULL HANDLING (SR3146.9.9.4.9)

The Functions tree panel provides the following functions for the explicit handling of NULL markers:

- Is undefined: isNull(arg1)
- Undefined - one of two: nvl(arg1, arg2)
- Undefined - one of many: coalesce(arg1, arg2, ...)

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.10.12 GID-2667628 EXPRESSION EDITOR - PNUTS (SR3146.9.9.4.6)

The Expression editor provides Pnuts scripting.

The Pnuts mode does not support extensive syntax and semantics validation, access to the Operators and Functions tree panels, and code folding.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.10.13 GID-2667629 EXPRESSION EDITOR - EXPRESSION SIMULATION (SR3146.9.9.4.13)

The Expression editor provides a simulation dialog for expressions defined for process parameters, transitions, and flexible or conditional rules.

- The simulation of expressions is not available as long as the expression contains an error.
- For expression elements (output references and functions annotated as non-deterministic) that cannot be evaluated automatically at the time of simulation, the user needs to provide a value. The expression element and the data type required for the value are displayed. It is possible to define NULL (Undefined) as value, if this is a possible value for the expression element.
- Expression elements with a missing or invalid value are marked with an error icon.
- To enter values, data type-dependent editors are used. Only values for data types that are listed in the **Expression Editor Literals (SR3146.9.9.4.5)** section ([GID-2667622](#)) and that provide an editor can be entered.
- The expression can be evaluated as soon as all expression elements hold a value.
- The expression result is displayed.
- The data type of the expression result is displayed.

TIP

Functions are programmatically annotated as deterministic or not. This is important if new functions are made available. See section "Configuring the Expression Editor of Recipe and Workflow Designer and Data Manager" in Volume 3 of the Technical Guide "Configuration and Extension" [A5] ([GID-2666084](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11 Other Editors (SR3146.9.2.17+)

The workbench provides various editors that support data entry. This applies to the various types of input data.

9.2.11.1 MEASURED VALUE EDITOR

The system provides a Measured Value editor for entering a value with a unit of measure.

- An editor-specific icon indicates the editor's availability.
- The editor is available in the Parameter Panel (SR3146.9.2.7) UI element ([GID-2666574](#)) and the property windows ([GID-2666575](#)).
- See also **Measured Value Technical Property Type (SR3071.8.7.14)** in "Functional Requirement Specification Data Management" [A1] ([GID-2666084](#)).

9.2.11.2 MULTI-LINE TEXT EDITOR

The system provides a Multi-line text editor for writing text.

- The editor can interpret HTML syntax.
The system supports the following HTML tags: ,
, , <u>, <i>, <sup>, <sub>, , , and . The usage of HTML tag attributes is not recommended. For example, for the tag, PharmaSuite only supports the size and color attributes while the face attribute to define the usage of a different font family is not supported. Attributes are interpreted for the display of text in the Production Execution Client, in reports, and by the export for archive functionality (to PDF/A). Text that is formatted with HTML is displayed as plain text including the HTML tags in master recipe reports or master workflow reports. In batch reports and workflow reports, however, formatting with the supported tags is interpreted and applied. For plain text, the system can check during execution in the Production Execution Client whether there is sufficient space to display the text in one line. If not, it adds line breaks as needed. If HTML is used, the system cannot determine the required length and the user of the editor has to add line breaks as required.
- The exception text attribute of a process parameter supports only the and
 HTML tags.
- HTML syntax usage is only expected in process parameter attributes for instruction text, instruction table text, and instruction link text attributes. Further usage may have undocumented limitations.
- An editor-specific icon indicates the editor's availability.
- The editor is available in the Parameter Panel (SR3146.9.2.7) UI element ([GID-2666574](#)) and the property windows ([GID-2666575](#)).

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.11.3 GID-2667632 DATE/TIME PICKER EDITOR (SR3146.9.2.17.1)

The system provides a Date/Time Picker editor for entering a date and time value.

- An editor-specific icon indicates the editor's availability.
- The editor is available in the Parameter Panel (SR3146.9.2.7) UI element ([GID-2666574](#)) and the Change status dialogs.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11.4 GID-2667633 DURATION EDITOR (SR3146.9.2.17.2)

The system provides a Duration editor for entering a duration value.

- An editor-specific icon indicates the editor's availability.
- The editor is available in the Parameter Panel (SR3146.9.2.7) UI element ([GID-2666574](#)) and the property windows.
- See also Duration Technical Property Type (SR3071.8.7.16) in "Functional Requirement Specification Data Management" [A1] ([GID-2666084](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11.5 GID-2667634 PACKAGING LEVEL DATA EDITOR (SR3146.9.2.17.3)

The system provides a Packaging Level Data editor for entering the packaging level data: Meaning, Contained number, Inventory level, and a Hide during execution option.

- An editor-specific icon indicates the editor's availability.
- The editor is available in the Parameter Panel (SR3146.9.2.7) UI element ([GID-2666574](#)) and the Property Window - Header (SR3146.9.2.15) UI element ([GID-2667602](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11.6 GID-2667635 LIST SELECTION EDITOR (SR3146.9.2.17.4)

The system provides a List Selection editor for choosing a list of items, such as a set of exception or comment texts.

- An editor-specific icon indicates the editor's availability.
- The editor is available in the **Property Window - Header (SR3146.9.2.15)** UI element ([GID-2667602](#)) and the **Property Window - Element (SR3146.9.2.12)** UI element ([GID-2667603](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11.7 GID-2667636 UNIT PROCEDURE AND OPERATION PATH EDITOR (SR3146.9.2.17.5)

The system provides an editor for choosing a path that is built from a unit procedure or unit procedure / operation of the current object.

- An editor-specific icon indicates the editor's availability.
- Intelligent auto-completion feature supports the selection of an existing unit procedures and its operations.
- The editor is available in the **Parameter Panel (SR3146.9.2.7)** UI element ([GID-2666574](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.11.8 GID-3388155 WORK INSTRUCTION SELECTION EDITOR

The system provides an editor to select a work instruction document from the list of work instruction objects maintained in Process Designer.

A user can select a Work Instruction or cancel the selection.

TIP

- An editor-specific icon indicates the editor's availability.
- The editor is available in the **Document (SR0040.8.2) Work Instruction** process parameter link

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.2.11.9 FURTHER EDITORS

The editors listed in this section are specified in the "Functional Requirement Specification Data Management" [A1] ([GID-2666084](#)).

- BigDecimal editor
(see [BigDecimal Technical Property Type \(SR3071.8.7.3\)](#))
- Boolean editor
(see [Boolean Technical Property Type \(SR3071.8.7.4\)](#))
- Expression editor
(see [Expression Editor \(Data Manager\) \(SR3071.8.1.4\)](#))
- FlexibleAttributeDefinition editor
(see [Flexible Attribute Definition Technical Property Type \(SR3071.8.7.9\)](#))
- FlexibleStateModel editor
(see [Status Model Technical Property Type \(SR3071.8.7.6\)](#))
- FlexibleTagDefinition editor
(see [Flexible Tag Definition Technical Property Type \(SR3071.8.7.8\)](#))
- Label Layout Selection editor
(see [Label Layout Selection Editor \(SR3071.8.8.1\)](#))
- String editor
(see [String Technical Property Type \(SR3071.8.7.5\)](#))

9.2.12 GID-2666581 Statistics (SR3146.9.2.18)

The system provides a statistical summary for recipes, workflows, and custom building blocks, which includes the number of used artifacts of a selected object.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Low
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.12.1 GID-2667638 STATISTICS VIEW (SR3146.9.2.18.1)

The statistics view provides details of the following artifacts:

- Unit procedures
- Operations
- Phases
- Process parameters
- Material parameters
- MFC items (with number of inputs, outputs, transfers)
- Privilege parameters
- Capability parameters

- Work center assignment parameters
- Equipment requirement parameters
- Additional property requirements
- Transitions with identifiers
- Process parameter input expressions

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Low
MES-Compliance: 21 CFR Part 11 relevance	No

9.2.12.2 GID-2667639 STATISTICS-BASED WARNING (SR3146.9.2.18.2)

When a recipe, workflow, or custom building block with more than 1,000 phases is saved, the system displays a warning.

A recipe, workflow, or custom building block of this magnitude exceeds the boundaries of PharmaSuite's design space and can lead to unexpected system responses.

Attribute	Value
MES-Business: GxP relevance	No
MES-Business: Business Impact	Low
MES-Compliance: 21 CFR Part 11 relevance	No

9.3 GID-2666078 Version Control (SR3146.4.5)

The following objects are under version control:

- master recipes,
- workflows, and
- change requests.

For the available statuses of master recipes and master workflows, see

- "Standard Statuses for Version Control (SR3146.6.4)" ([GID-2666039](#))

For the available statuses of change requests, see

- "Status Management of Change Requests (SR3146.12.2+)" ([GID-2666056](#))

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.3.1 GID-2666582 Status Change (SR3146.4.5.1)

Recipe and Workflow Designer provides a status change function for master recipes, master workflows, and change requests. This includes:

- Check that master recipes and master workflows have no error or warning messages left in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#)).
- Definition of the desired transition (target status).
Does not apply to change requests.
- Definition of the period of validity.
Does not apply to change requests.
- Overview of other versions of the same master recipe or master workflow, incl. their statuses and periods of validity.
Does not apply to change requests.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.3.1.1 GID-2667640 PERIOD OF VALIDITY (SR3146.6.4.2)

The period of validity of a valid object includes the **Valid from...** and **Valid until...** dates.

The start date of the validity period includes the entire day and thus begins at 12:00 AM while the end date of the validity period includes the entire day and thus lasts until 11:59 PM. This means that a validity period of exactly one day can be defined by selecting the same date for both start and end dates.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.3.1.2 GID-2667641 CONSISTENCY CHECKS (SR3146.6.4.3)

The status change checks verify the consistency of a desired status change and its related period of validity. In case of conflicts, corresponding messages are displayed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.3.2 *GID-2666583 Version History (SR3146.4.5.3)*

Recipe and Workflow Designer provides a version history function for master recipes, master workflows, and change requests in order to track status transitions. For master recipes and master workflows, the version history function also tracks version transitions. The history includes transitions that took place in a different environment (e.g. prior to export or import of a master recipe or master workflow).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.3.3 *GID-2666584 Configurable Version Control (SR3146.6)*

The version control is configurable. The configuration includes:

- Definition of version graphs with statuses and transitions.
- Assignment of an electronic signature required to perform a status change.
Electronic signatures are configurable.
- Definition of a numbering scheme for versions.

Example:

- Initial version = **V1.0**
- Status change from **Verification** to **Edit**: new version = **V1.1**
- **V1.1** is copied: new version = **V2.0**

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	Yes

9.3.4 *GID-2666585 Flexible Version Graph Assignment (SR3146.6.1)*

A status graph can be assigned per class.

Example: Class Master recipe - Standard graph

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	No

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

9.3.5 GID-2666586 Flexible Definition of Approval Details (SR3146.6.7)

The details for status changes and approvals can be defined.

For master recipes and master workflows, this includes an e-mail notification mechanism on user level.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

9.3.5.1 GID-2667642 FLEXIBILITY OF USER GROUPS (SR3146.6.7.1)

The number of user groups available in the system defines the number of different user groups that can be assigned for approval.

For further details, see use cases and RQ of electronic signatures (Security module).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	Medium
MES-Compliance: 21 CFR Part 11 relevance	Yes

9.3.5.2 GID-2667643 SERIAL APPROVAL (SR3146.6.7.3)

Serial approval of n user groups/users can be enforced.

Example 1: Group A approves, then group B can approve

For further details, see use cases and RQ of electronic signatures.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

9.4 Library Concept (SR3146.9.11+)

The library concept for building blocks according to S88 includes System Building Blocks and Custom Building Blocks.

9.4.1 GID-2666587 System Building Block Installation (SR3146.9.11.1)

System building block libraries can be installed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

9.4.2 GID-2666588 Custom Building Block (SR3146.9.11.3)

Building blocks can be saved as custom building blocks. This applies to

- phases,
- operations,
- unit procedures, and
- procedure-level building blocks.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
-

10 Export/Import of Master Recipes, Master Workflows, and Custom Building Blocks (SR1075.1+)

Developing a master recipe or master workflow is an ambitious task and should be carefully planned. Thorough testing is essential before they can be approved. It is a good practice to manage their development life-cycle across multiple PharmaSuite instances (e.g. development system, test system, productive system). For this purpose, master recipes, master workflows, and custom building blocks need to be transferred from a source system to a target system.

10.1 GID-2666081 General Prerequisites and Usage of B2MML (SR1075.1.1)

Based on B2MML, the **PharmaSuite Export/Import** functionality allows to export and imports master recipes, master workflows, and custom building blocks maintained with Recipe and Workflow Designer.

For objects that are protected by an access privilege: The system shall only allow to export objects whose access privilege matches the access privilege of the logged-in user.

The following prerequisites apply:

- Both the source and target system must be of the same (maintenance) release.
- Available system building blocks must be identical in both the source and target system.
- Any master data object that is referenced in the source system by the master recipe, master workflow, or building block to be exported must be available in the target system with the same attributes (e.g. identifier, description, version) to use the master recipe, master workflow, or building block in the target system without further manual modifications. Missing objects are detected by the **Import with missing master data (SR1075.1.3.5+)** actions ([GID-3117638](#)).
- The versions of the underlying B2MML schemas must be identical.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	Yes

10.2 Export (SR1075.1.2+)

10.2.1 GID-2666589 Export Dialog (SR1075.1.2.1)

The export dialog can be opened for the master recipe, master workflow, or custom building block of the active graph window tab. This shall be possible from the **File** menu, the toolbar or the upper tab bar of the active Graph Window tab. The export functionality is protected by an export-specific access privilege.

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

The opened dialog shall display

- The object type of the master recipe, master workflow, or custom building block.
- The object name including the version of the master recipe or master workflow.
- The object name including the revision of the custom building block.
- The path and file name to be used for the export file containing the master recipe, master workflow, or custom building block data to be exported. Path and file name shall be changeable.
- The path and file name to be used for the log file created during the export action. Path and file name shall be changeable.
- The export result (success or error).

When the export has been performed the log file with further information shall be accessible from the export dialog.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.2 GID-2666590 Export File Path (SR1075.1.2.2)

The file path for the export file and the log file shall be saved user-specifically after an export has been executed and shall be provided as suggestion for the next export.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.3 GID-2666591 Export and Log File (SR1075.1.2.3)

The system asks for a user confirmation before overwriting an existing file.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.4 GID-2666592 Export File Data (SR1075.1.2.4)

The export file shall contain all data to be able to create the exported master recipe, master workflow, or custom building block in a target system if the target system fulfills the prerequisites stated by the **General Prerequisites and Usage of B2MML (SR1075.1.1)** requirement ([GID-2666081](#)).

- Export/Import of Master Recipes, Master Workflows, and Custom Building Blocks (SR1075.1+)
-
-
-

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.4.1 GID-2667644 EXPORT FILE CHECKSUM (SR1075.1.2.4.1)

The system shall extend the file content of the export file (e.g. by a checksum) to allow the import functionality to detect a manipulation of the file content.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.4.2 GID-2667645 VERSION AND STATUS OF EXPORTED DATA (SR1075.1.2.4.2)

The version and status of the exported objects in the source system are part of the export file data.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.2.4.3 GID-2667646 STATUS HISTORY OF EXPORTED DATA (SR1075.1.2.4.3)

The export file data for the master recipe, master workflow, or custom building block shall contain the information about the source system that holds the history data of the latest status transition prior to the export.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3 Import (SR1075.1.3+)

10.3.1 GID-2666593 Import Dialog (SR1075.1.3.1)

The import dialog for a master recipe, master workflow, or custom building can be opened from the **File** menu or the toolbar. Both actions are protected by an import-specific access privilege.

The opened dialog shall provide

- A file selector to select the file with the data to be imported.
- A file selector to define the path and file name for the log file.

After selecting an import file, the dialog shall display

- The object type of the object to be imported.
- The object name to be imported including the version of the master recipe or master workflow.

- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- The object name to be imported including the revision of the custom building block.
- The import result (success, with warnings, or error)

When the import has been performed the log file with further information shall be accessible from the import dialog.

TIP

A successfully imported object is opened in the background in case it is not hidden by **Open Dialog - Hide Objects** ([GID-2667583](#)) and matches the current mode, which means that an imported master workflow is not opened within Recipe Designer.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.2 GID-2666594 Import File Path (SR1075.1.3.2)

The file path for the import file and the log file shall be saved after an import action and provided as suggestion in the file selector for the next import.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.3 GID-2666595 Import Log File (SR1075.1.3.3)

The system asks for a user confirmation before overwriting an existing log file.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.4 GID-2666596 Import of Data (SR1075.1.3.4)

Independent of the current active workbench, it shall be possible to import a master recipe, a master workflow, or a custom building block.

Only if the imported object matches the currently active workbench and the import has not failed, is the object opened in a new Graph Window tab. If the object is protected by an access privilege and this access privilege does not match the access privilege of the logged-in user, the opening of the new tab is omitted.

- Export/Import of Master Recipes, Master Workflows, and Custom Building Blocks (SR1075.1+)
-
-
-

If the import file contains choice elements that are not available in the target system, the import fails and the missing choice elements are listed in the log file.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.4.1 **GID-2667647 IMPORT FILE CHECKSUM(SR1075.1.3.4.1)**

The system shall check whether the export checksum still matches the file content. If not, the import fails.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.5 **GID-2666597 Version and Status of Imported Object (SR1075.1.3.4.2)**

The master recipe, master workflow, or custom building block is imported with the version and status as exported. If the object already exists in the target system, the import fails.

A status transition can be skipped, see the **Skip status transition (SR1075.1.3.5.4)** action ([GID-2666602](#)).

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.5.1 **GID-2667648 STATUS HISTORY OF IMPORTED DATA (SR1075.1.3.4.3)**

The master recipe, master workflow, or custom building block is imported with the version and status as exported. An exception to this can be caused by the **Skip status transition action (SR1075.1.3.5.4)** action ([GID-2666602](#)). If the object already exists in the target system, the import fails.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.6 **Import with Missing Master Data (SR1075.1.3.5+)**

A master recipe, master workflow, or custom building block can be imported even if referenced master data is not available in the target system. To support this, the system executes several actions:

- **Replace a Non-existing Object with a Dummy Object (SR1075.1.3.5.1)** action ([GID-2666599](#))
- **Remove an Object Link to a Non-existing Object (SR1075.1.3.5.2)** action ([GID-2666600](#))

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

- **Detect and Remove a String Reference to a Non-existing Object (SR1075.1.3.5.3)**
action [\(GID-2666601\)](#)
- **Skip Status Transition (SR1075.1.3.5.4)** action [\(GID-2666602\)](#)

If these actions have adapted the master recipe, master workflow, or custom building block and have removed references to allow it to be imported, all adaptions are documented with a warning:

- **Import Consistency Check Messages (SR1075.1.3.5.5+)** warnings [\(GID-2666603\)](#)

10.3.6.1 GID-2666599 REPLACE A NON-EXISTING OBJECT WITH A DUMMY OBJECT (SR1075.1.3.5.1)

The Material (product) of a master recipe must be available in the target system. It can be an object reference to an ERP BOM or to a material. If the material or the ERP BOM is not available in the target system, it is replaced with a dummy material created by PharmaSuite ("S88DefImpMaterial").

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.6.2 GID-2666600 REMOVE AN OBJECT LINK TO A NON-EXISTING OBJECT (SR1075.1.3.5.2)

A master recipe, master workflow, or custom building block to be imported can contain object links to master data. If the linked master data is not available at the target system, the object link and all non-allowed data structures are removed.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.6.3 GID-2666601 DETECT AND REMOVE A STRING REFERENCE TO A NON-EXISTING OBJECT (SR1075.1.3.5.3)

A master recipe, master workflow, or custom building block can contain soft references to master data defined with phase parameters. Soft references to non-available objects are not detected by the common Recipe and Workflow Designer consistency checks and will cause unexpected system behavior during execution.

The system shall execute checks at import to detect as many of these soft references to non-available objects as possible.

Since the PharmaSuite system integrators can build their own system phases, the system shall be extendable by a PharmaSuite system integrator to provide and configure additional checks to detect a soft reference to a non-available object (see chapter "Implementing Checks of Soft References" in the "Technical Guide Developing System Building Blocks" [A6] [\(GID-2666084\)](#)).

- Export/Import of Master Recipes, Master Workflows, and Custom Building Blocks (SR1075.1+)
-
-
-

If a check detects a soft reference to a non-available object in the target system, the soft reference is deleted.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.6.4 GID-2666602 SKIP STATUS TRANSITION (SR1075.1.3.5.4)

An imported master recipe, master workflow, or custom building block is kept in the **Draft** status in case it was changed to allow to be imported even if not all required master data objects were available in the target system.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

10.3.7 Import Consistency Check Messages (SR1075.1.3.5.5+)

The following warning messages are available to inform the recipe or workflow author about issues found and actions taken by the import consistency checks. They are displayed in the **Messages (SR3146.9.2.16+)** window ([GID-2666576](#)).

10.3.7.1 GID-2667649 IMPORT CHECK - MISSING DATA IN TARGET SYSTEM (SR1075.1.3.5.5.1)

Message category: Warning

Issue: The imported master recipe, master workflow, or custom building block references data that is not available in the target system.

The warning can be removed with the **Messages - Resolve issue (SR3146.9.2.16.4)** function ([GID-2667609](#)). The system does not create missing data, it only removes the warning.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

-
- FT PharmaSuite® 11.01.00 - Functional Requirement Specification Recipe and Workflow Management
-
-

**10.3.8 GID-2666604 Abort Import if a Confidential Object Cannot Be Protected
(SR1075.1.3.6)**

A master recipe, master workflow, or custom building block can be protected by an access privilege. If the access privilege is not available in the target system, the import shall be aborted to avoid unprotected access to the confidential object.

Attribute	Value
MES-Business: GxP relevance	Yes
MES-Business: Business Impact	High
MES-Compliance: 21 CFR Part 11 relevance	No

Validator - MFC - No input defined for output - Error (SR3146.9.4.3.64.2) • 71
 Validator - MFC - No input defined for output - Warning (SR3146.9.4.3.64.1) • 70
 Validator - MFC - No input defined for output (SR3146.9.4.3.64) • 70
 Validator - MFC - No output defined for input - Error (SR3146.9.4.3.63.2) • 70
 Validator - MFC - No output defined for input - Warning (SR3146.9.4.3.63.1) • 70
 Validator - MFC - No output defined for input (SR3146.9.4.3.63) • 69
 Validator - MFC - None planned quantity mode for Dispense unit procedure (SR3146.9.4.3.115) • 86
 Validator - MFC - Outgoing or incoming connector is missing (SR3146.9.4.3.138) • 72
 Validator - MFC - Output defined for workflow (SR3146.9.4.3.110) • 71
 Validator - MFC - Planned quantities of input and output parameters do not match (SR3146.9.4.3.116) • 82
 Validator - MFC - Planned quantity mode is As defined - Allowed weighing method is missing (SR3146.9.4.3.131) • 93
 Validator - MFC - Planned quantity mode is As defined - Planned quantity is missing (SR3146.9.4.3.122) • 89
 Validator - MFC - Planned quantity mode is As defined - Planned quantity is missing (SR3146.9.4.3.130) • 93
 Validator - MFC - Planned quantity mode is As defined - Tolerances are missing (SR3146.9.4.3.121) • 89
 Validator - MFC - Planned quantity mode is As defined - Tolerances are missing (SR3146.9.4.3.129) • 92
 Validator - MFC - Planned quantity mode is As produced - Tolerances are missing (SR3146.9.4.3.119) • 91
 Validator - MFC - Transfer input for Dispense unit procedures - Error (SR3146.9.4.3.65.2) • 85
 Validator - MFC - Transfer input for Dispense unit procedures - Warning (SR3146.9.4.3.65.1) • 84
 Validator - MFC - Transfer input for Dispense unit procedures (SR3146.9.4.3.65) • 84
 Validator - MFC - Unallowed planned quantity mode - Error (SR3146.9.4.3.113.2) • 82
 Validator - MFC - Unallowed planned quantity mode - Warning (SR3146.9.4.3.113.1) • 81
 Validator - MFC - Unallowed planned quantity mode (SR3146.9.4.3.113) • 81
 Validator - MFC - Unallowed weighing method (SR3146.9.4.3.120) • 88
 Validator - MFC - Uniqueness and format of MFC position (SR3146.9.4.3.68) • 79
 Validator - MFC - Weighing material type not defined (SR3146.9.4.3.123) • 89
 Validator - MFC (final output) - Planned quantity does not fit master recipe (SR3146.9.4.3.133) • 77
 Validator - Minimum required equipment parameters - Error (SR3146.9.4.3.83.2) • 96
 Validator - Minimum required equipment parameters - Warning (SR3146.9.4.3.83.1) • 96
 Validator - Minimum required equipment parameters (SR3146.9.4.3.83) • 96
 Validator - Minimum required material parameters - Error (SR3146.9.4.3.10.2) • 78
 Validator - Minimum required material parameters - Warning (SR3146.9.4.3.10.1) • 78
 Validator - Minimum required material parameters (SR3146.9.4.3.10) • 77
 Validator - Nested group (SR3146.9.4.3.144) • 63
 Validator - Non-production MR - More than one unit procedure or operation (SR3146.9.4.3.100) • 93
 Validator - Not allowed branch after start step (SR3146.9.4.3.145.2) • 64
 Validator - Not allowed branch after start transition (SR3146.9.4.3.145.3) • 64
 Validator - Not allowed branch before end step (SR3146.9.4.3.145.1) • 64
 Validator - Not allowed branch before end transition (SR3146.9.4.3.145.4) • 64
 Validator - Not allowed parameter for group usage (SR3146.9.4.3.146) • 65
 Validator - Not supported parameter for group usage (SR3146.9.4.3.147) • 65
 Validator - Outgoing link (SR3146.9.4.3.12) • 61
 Validator - Packaging level of master recipe (SR3146.9.4.3.107) • 74
 Validator - Packaging level of material parameter (SR3146.9.4.3.108) • 83
 Validator - Phase parameter - Broken link - Error (SR3146.9.4.3.25.2) • 68
 Validator - Phase parameter - Broken link - Warning (SR3146.9.4.3.25.1) • 67
 Validator - Phase parameter - Broken link (SR3146.9.4.3.25) • 67
 Validator - Phase parameter - ERP BOM attribute discrepancy - Resolve (SR3146.9.4.3.56.1) • 77
 Validator - Phase parameter - ERP BOM attribute discrepancy (SR3146.9.4.3.56) • 76
 Validator - Phase parameter - Invalid reference (SR3146.9.4.3.36) • 68
 Validator - Phase parameter - Missing ERP BOM position (SR3146.9.4.3.50) • 75
 Validator - Phase parameter - Multiple ERP BOM positions (SR3146.9.4.3.51) • 76
 Validator - Phase parameter - Non-ERP BOM position (SR3146.9.4.3.55) • 76
 Validator - Phase parameter - Syntax (SR3146.9.4.3.21) • 67
 Validator - Property definition is inconsistent (SR3146.9.4.3.82) • 96
 Validator - Recipe - Min/Max quantities without UoM (SR3146.9.4.3.111) • 73

Validator - Recipe - Packaging level does not fit ERP BOM - Resolve (SR3146.9.4.3.58.1) • 75
Validator - Recipe - Packaging level does not fit ERP BOM (SR3146.9.4.3.58) • 75
Validator - Recipe - Planned quantity does not fit ERP BOM - Resolve (SR3146.9.4.3.57.1) • 74
Validator - Recipe - Planned quantity does not fit ERP BOM (SR3146.9.4.3.57) • 74
Validator - Recipe - Reference quantity not defined (SR3146.9.4.3.67) • 73
Validator - Selection branch (SR3146.9.4.3.15) • 62
